Investment Manager's Report

Fidelity Euro Bond FAM Fund (the "Sub-Fund")

The fund posted a positive return, outperforming the index by 103 basis points. The fund's credit strategy was the key driver of alpha generation, while its curve positioning detracted from gains. In the credit space, we maintained our overweight credit beta stance for most of the period and transitioned to an underweight position towards the end of the period, and credit spreads also tightened. Our significant overweight to financials added 76 basis points, with our exposure to Barclays and UBS Group being particularly beneficial, collectively adding 49 basis points to relative gains. Additionally, our allocation to insurance, property, basic industry, capital goods, energy, and utility sectors also supported performance. The fund's lack of exposure to Italian and Spanish government bonds detracted from gains, while our no allocation to French government bonds supported the fund's returns. Within ratings, our overweight position in BBB-rated credits added the most value. On an individual issuer basis, our holdings in ASR Nederland and NN Group were most beneficial, while there were no single name issuers which materially detracted from gains. In term structure, the fund maintained an overweight duration position, with a relative effective duration of 1.7 years. The fund's long EUR duration position had a negative effect on relative gains, whereas our tactical long USD duration position helped the fund offset the losses. Particularly, our positioning at the front end and 7-year tenors along the curves weighed on performance the most. However, the fund's positioning at 4-year maturity of the EUR curve partially offset these gains.

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Fidelity Euro Short Term Bond FAM Fund (the "Sub-Fund")

The fund achieved a positive return but underperformed the index by 5 basis points on a gross basis. The credit strategy, particularly our allocation strategy, and the stable yield component were key drivers of performance, while the fund's curve positioning detracted from gains. In the credit space, we were overweight in credit beta until the end of the period, and credit spreads also tightened. Our significant overweight to financials added 78 basis points, with our exposure to Commerzbank and Deutsche Bank being particularly beneficial, collectively adding 34 basis points to relative gains. Additionally, our allocation to property, consumer non-cyclical, energy, and tech & communication sectors also added value. Conversely, our exposure to quasi-sovereign, other financials, and utility names weighed on performance. The fund's lack of exposure to Italian and Spanish government bonds also detracted from gains. On an individual issuer basis, apart from financial names, our exposure to Telefonica and Bayer was particularly beneficial, while our holdings in Thames Water Utility negatively impacted the fund's performance. In terms of the term structure, the fund maintained an overweight duration position, with a relative effective duration of 0.9 years. The fund's tactical long USD duration contributed 46 basis points to relative gains, while our long EUR duration position negatively impacted performance and more than offset the gains. In terms of maturity, our positioning at the front end and 4-year tenors added the most value, whereas our positioning at the 2-year maturity more than offset the gains.

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Fidelity Global Dividend FAM Fund (the "Sub-Fund")

The fund delivered strong absolute returns but failed to keep pace with a strongly rising market. Global equities gained over the review period, driven by enthusiasm around intelligence (AI) alongside easing of inflationary concerns, moderating interest rates and resilient economic growth, and receding inflationary pressures saw major central banks including the US Federal Reserve, European Central Bank (ECB) and the Bank of England (BoE) cut key interest rates. The underweight stance in the communication services, consumer discretionary and information technology sectors weighed on relative performance.

A significant fraction of the negative contribution to relative performance came from the fund not owning the 'Magnificent 7'. Most of these stocks - Nvidia, Amazon, Meta Platforms, Apple and Tesla - continued to benefit from the AI-driven momentum. Our valuation discipline and the little to no dividends paid by these businesses make them unsuitable for our dividend-based total return approach. Additionally, semiconductor manufacturing company Broadcom (not owned) rallied, particularly in the last quarter, on predicting robust growth in demand for its custom AI chips over the next few years. Shares in Japanese tyre manufacturer Bridgestone fell as management lowered its full year guidance and reported weaker than expected second quarter earnings on intensifying competition. The company's positioning on premium tires should help the stock to outperform in the long term. The holding in Nippon Telegraph and Telephone was weak on concerns surrounding customer loss. The position was subsequently closed.

On a positive note, Taiwan Semiconductor was the most notable contributor over the year. The chipmaker reported strong results and continues to benefit from its strong competitive position and market share in leading edge chips which should continue to benefit from increased AI demand. Progressive Corp, the US auto insurer, also saw a significant share price rise, benefitting from its strong underwriting performance and policy in force growth. The company is a good example of the attractive stock-specific opportunities we can find that are not reliant on continued momentum in the AI theme to deliver performance.

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Fidelity Focus Equity FAM Fund (the "Sub-Fund")

The portfolio delivered strong positive returns in 2024 but lagged its comparative index. The underperformance was largely due to our underweight exposure to bellwether NVIDIA. While we anticipated a pause to consolidate its 240% gain from 2023, this did not materialise, particularly in the first half of the year, although we recouped some of these losses in the second half of the year. Therefore, while stock selection was negative, sector allocation contributed positively to relative performance. From a sector perspective, security selection in the information technology (IT) and financials (especially emerging markets banks) sectors hurt relative returns. The biggest stock-specific disappointments were in the semiconductor space. As such, the position in chipmaker STMicroelectronics saw weak trading after lowering its guidance twice, projecting a recovery later than anticipated due to sluggishness in industrial demand. The ongoing headwinds are viewed as cyclical rather than structural, with long-term growth drivers for the automotive and industrial sectors remaining robust as we look towards 2026. Memory chipmakers Samsung Electronics and Micron Technology also detracted from performance after a strong share price run in the first half of the year. Samsung Electronics fell sharply due to disappointing outcomes in its high-bandwidth memory (HBM) chip business and its impact on its quarterly earnings. Samsung reorganised its management for its various divisions in early November, ahead of the usual schedule, negatively impacting investor sentiment. Nevertheless, we continue to hold a favourable view of Samsung because of its potential to catch up in high-bandwidth memory (HBM) chips with global rivals, world-class capabilities in narrowing the technology gap relative to competitors, and its higher market share of conventional DRAM chips. Meanwhile, Micron came under pressure following a weak forecast indicating sluggish demand for personal computers and smartphones, overshadowing a lift from robust growth in sales of artificial intelligence (AI) chips.

On a more positive note, the exposure to Taiwan Semiconductor Manufacturing Corporation (TSMC) benefitted from stronger earnings and revenue guidance for CY 2024 from rising demand for high-end chips used in artificial intelligence (AI) applications. TSMC also benefitted from the euphoria around NVIDIA, which relies on TSMC to produce its AI-optimised chips. Wireless devices and processors manufacturer Qualcomm also posted upbeat results and outlook owing to strength in handset demand, with strong prospects of growth in 2024. Broadcom ended the year strongly after delivering positive results for its fourth quarter, helped by strong sales of AI processors and networking chips. Broadcom's CEO forecasted a revenue opportunity of \$60 billion to \$90 billion by fiscal 2027, underscoring the company's growth potential. Additionally, reports of Broadcom collaborating with Apple on its first AI-focused server chip further boosted its shares. Optimism around Broadcom also benefitted Marvell Technology, which separately reported better-than-expected third-quarter results and announced an expanded deal with Amazon on cloud software and hardware. In financials, Indian private lender HDFC Bank underperformed as its earnings growth lagged peers following its merger with Housing Development Finance Corporation (HDFC), which resulted in flat sequential loan and deposit growth. Despite this, the bank's resilience was evident, with its strong third-quarter results leading to a recovery in sentiment. Management's plans to improve the bank's loan-to-deposit ratio, alongside projections of loan growth surpassing the system's growth over the next two years, bolstered investor confidence. Meanwhile, broad-based weakness in the Indonesian stock market undermined the position in Indonesia's largest banks Bank Negara and Bank Rakyat. Nonetheless, both banks remain high beta plays on the interest rate cycle and mass segment in Indonesia, which has a large unbanked population and low Debt/GDP. The commercial banking sector continues to see strong earnings growth supported by loan growth, high interest rates and improving asset quality. In healthcare, positions in Boston Scientific and Lonza Group advanced led by their solid results which reaffirmed their long-term structural growth prospects and strong outlook. Medical device maker Boston Scientific's stock rallied driven by market expansion and innovation.

The company achieved strong quarterly results in October and finalised the acquisition of Axonics to enhance its urology portfolio. Similarly, biopharmaceutical contract manufacturer Lonza reported strong numbers against tempered expectations and highlighted of solid momentum in its largest division, Biologics, which saw strong commercial demand and some recovery in earlier stage products.

Investment Manager's Report (continued)

US Equity Value FAM Fund (the "Sub-Fund")

In 2024, the US equity markets experienced a dynamic year marked by significant milestones and fluctuations. The year began with a strong rally in the first quarter, highlighted by the S&P 500 Index closing above the 5,000 milestone for the first time in February. This surge was underpinned by the US economy's resilience, which defied recession predictions by achieving a 2.5% growth rate in 2023, with a robust fourth-quarter GDP growth of 3.4%. The labor market remained strong, with continued payroll gains and historically low unemployment rates below 4%. However, persistent inflation led to higher-than-expected increases in the Consumer Price Index (CPI) in January and February, prompting the Federal Reserve to delay proposed interest rate cuts to the second half of the year. Despite overall inflation being below its peak, consumer spending showed signs of caution, likely due to "cost fatigue," as evidenced by declining retail sales. Investors were generally pleased with corporate earnings growth, although three of the "Magnificent Seven" stocks—Apple, Alphabet, and Tesla—suffered due to disappointing earnings and weak forward guidance.

In the second quarter, equity market performance diverged. Stocks related to Artificial Intelligence (AI) continued to rally, driving several equity indexes to all-time highs, while other market segments declined. High inflation in April raised concerns that the Federal Reserve might maintain higher interest rates for longer. However, stocks rallied in May and June as inflation showed signs of cooling, with the 12-month CPI falling to 3.3%. First-quarter GDP growth came in below expectations, suggesting a slowing economy, and nonfarm payrolls moderated with the unemployment rate steady at 4.0%. Corporate earnings were generally positive, with most S&P 500 constituents beating expectations, though earnings growth was concentrated among the "Magnificent Seven" stocks. The Federal Reserve's June meeting resulted in no change to the federal funds rate, with only one rate cut anticipated in 2024 due to persistent inflation.

The third quarter saw US equity markets post gains despite a sharp decline in early August, as inflation cooled, and the Federal Reserve began its long-awaited monetary easing cycle. Inflation reached its lowest level since 2021, with the 12-month CPI for August at 2.5%. The economy remained resilient, with second-quarter GDP growth at 3.0%, well above the first quarter's 1.4%. However, a weaker-than-expected payroll report in August and unchanged employment data in September led the Fed to cut the federal funds rate by 0.5% in September. With greater certainty about interest rates, investors rotated out of AI and technology stocks into small-cap and value stocks that could benefit from lower interest rates.

In the fourth quarter, despite declines in October and December, US equity markets finished with gains, buoyed by a strong post-election rally in November. The economy remained resilient, with strong consumer spending and low unemployment. Over 200,000 new jobs were created in November, and the unemployment rate remained historically low at 4.2%. The final estimate for third-quarter GDP growth was 3.1%, higher than the second quarter. The 12-month headline CPI fell below 3% for the first time since February 2021, though a slight uptick in November suggested entrenched inflation. Sticky inflation data and uncertainty about Trump administration policy led the Fed to reduce its forecast for 2025 interest rate cuts, dampening investor sentiment. Rising geopolitical tensions and high US debt levels also pressured stocks, and equities finished December without the typical "Santa Claus" rally. Fixed income markets suffered as yields rose, particularly on longer-maturity bonds.

Invesco Advisers, Inc.
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

M&G North American Value FAM Fund (the "Sub-Fund")

Global stocks surged for the second straight year, led by US stocks. US equities commenced 2024 with a robust performance, propelled by a strong economic backdrop, moderated inflation pressures and anticipated rate cuts. Investor enthusiasm for artificial intelligence (AI) significantly contributed to technology sector gains. The Federal Reserve's September rate cut marked a pivotal policy shift and Donald Trump's victory in the US presidential elections pushed the markets to further highs. The fund posted positive returns in the period but lagged the benchmark. Both stock selection and sector allocation contributed negatively. Technology and consumer staples were the largest relative detractors. Not holding Nvidia was our largest individual detractor. The stock performed well fuelled by the generative AI boom and rising demand for its AI chips. We added Whirlpool, Western Alliance, Zimmer Biomet, Amgen, Gilead Sciences and Fabrinet and fully exited Ebay, Truist Financial, GE Healthcare Technologies, Labcorp, Dover Corp, Newmont and DXC Technology during the year.

M&G Investment Management Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Amundi Emerging Markets Bond FAM Fund (the "Sub-Fund")

The portfolio strongly outperformed the benchmark in 2024, led by our hard currency credit selection and currency strategies, while our cash allocation marginally detracted from excess returns. Specifically, the largest contributors to excess returns within credit selection, were overweight positions in Ukraine, Argentina and Venezuela. Ukrainian bonds have performed well as the probability of an agreement between Ukraine and Russia has increased in the aftermath of the US elections considering promises delivered by President-elect Trump. We expected the credit to continue to trade strongly with better-than-expected restructuring terms. Argentina rallied on the expectation that Milei will implement a much-needed fiscal adjustment for the country as well as other labour and tax reforms. His appointment of former Central Bank Governor Luis Caputo to lead his economic transition team was also positive, but he faces an immense challenge as the country continues to deal with hyperinflation. In Venezuela, our remaining bond position performed strongly following the easing of sanctions on the oil industry as well as the end of the ban on bond trading. Within currencies, the strongest contribution was from our short position in the Euro as the dollar performed well following the Republican clean sweep and higher US yields. Looking ahead, EM hard currency bonds offer attractive absolute yields relative to history but country selection is crucial. A lower core rate outlook should also underpin the interest rate component of the asset class. We like idiosyncratic stories in countries that are seeing an improvement in fundamentals and those that have good relations with the incoming administration. We have a preference for Latin America and select African countries as valuations are compelling compared to other regions. In Asia and CEE, we hold selective overweights where carry and fundamentals are attractive. We remain broadly underweight Asia where spreads are generally tight. From a rating perspective, high yield still offers value, whereas investment grade spreads are relatively tight. Although our return expectations are largely driven by the carry the asset class offers, there is room for some spread compression in high yield given relatively elevated spreads. Overall we remain cautiously optimistic on the outlook for EM debt. Fundamentals are supportive for many EM countries who have embarked on a structural reform path and secured IMF financing. The start of a Fed easing cycle in the context of a resilient US and global economy and light investor positioning should drive the next leg of the rally in the asset class. More specifically, the US is experiencing a 'soft landing' with growth expected to slow to trend into 2025. US inflation continues to moderate while the labour market shows signs of cooling given the gradual rise in the unemployment rate. EM countries are also cutting rates but at a slower pace than the Fed to support their currencies. A more cautious pace of EM rate-cuts, however, should support the carry of EM debt and provide a cushion to further rate and/or FX volatility. The threat of tariffs could also pose as a headwind to EM growth and their respective currencies. On balance, we like those countries that are less directly exposed to potential tariffs, including commodity exporters, unless valuations already reflect those risks.

Amundi Ireland Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Amundi Strategic Bond FAM Fund (the "Sub-Fund")

The portfolio delivered robust returns in what have been an eventful year marked by start of the major central banks easing, defining US presidential elections and a renewed efforts by China to boost economic growth. European HY sleeve was the largest contributor to performance with Real Estate sector in Germany and Sweden coming on top with our selective security selection. The Banking sector was next in line with strong performance across the board given benign macroeconomic environment and the start of the rate-cutting cycle – our picks in Portugal and France made most in returns. Within the EM credit, Real Estate picks in Czech Republic and China, a handful of Argentine credits and exposure to Sri Lanka sovereign helped boost portfolio returns further. China property names benefitted from autumn policy announcements by the government aiming to restart its growth engines, while in Argentina the market recognised the country's success on the fiscal and reform fronts lifting the curves. Sri Lanka completed its long-dragging debt restructuring process resulting in renewed optimism and higher bond prices. In contrast, the Interest Rate sleeve was a detractor with our exposure to EUR duration a culprit - global rates market saw plenty of volatility and risk repricing, particularly in the second half of the year. We finished the year featuring an attractive high single digit yield, a duration profile of 3.85 years and an average credit rating of BB.

Amundi Ireland Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Amundi European Equity Value FAM Fund (the "Sub-Fund")

The portfolio underperformed its benchmark, the MSCI Europe Value, in 2024. At sector level, the portfolio had a positive contribution from Industrials and Communication Services. On the negative side, Financials and Information Technology detracted. At single stock level, IAG was a standout performer. Results, especially in the company's British Airways division have been considerably ahead of market expectations which has supported the name. The lower oil prices we have seen has also been a tailwind for the transport segment in general. Also of note was the good performance of cable and wiring company Prysmian which has enjoyed positive returns. Here, the share price has been supported by the theme of power grid infrastructure spending – especially in the US market. On the negative side, luxury company Kering lagged as weakness in the Gucci brand continued in 2024. This, along with the ongoing weakness in the Chinese economy was a headwind. Our holding of lighting company Signify was weak as inflation pressures have impacted margin development. We have sold the position.

Amundi Ireland Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Emerging Markets Bond Hard Currency FAM Fund (the "Sub-Fund")

The fund returned 5.80% relative to a benchmark return of 4.68% net of fees. Outperformance was driven largely by EM country selection with smaller positive contributions from our overweight exposure to the asset class and duration management. Duration management was also a small positive helped by our long EUR duration position. The biggest positive contributors to returns were longs in Argentina and Mexico, respectively. In Africa, overweights in Nigeria, Ghana, and Angola were also positive. Nigeria continues to benefit from the President's ongoing reform measures as well as his plans to reduce the fiscal deficit in 2024. Negative contributors include were largely driven by our underweight positions in Asian countries, including Pakistan, and China, respectively. Underweight positions in Bahrain and Oman were also a drag.

Amundi (UK) Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Euro Bond FAM Fund (the "Sub-Fund")

In 2024, the macroeconomic landscape underwent significant changes characterized by a gradual easing of inflation rates in the developed markets economies. The US displayed resilience, with strong jobs growth and persistent inflation. In contrast, Europe faced significant turbulences, particularly France and Germany struggled with political instability and industrial decline. This trend influenced key monetary policy decisions made by central banks and divergent growth and inflation perspectives sparked a monetary policy asynchrony between the US and Europe. The European Central Bank (ECB) executed a series of interest rate cuts, reducing its key interest rates four times throughout the year. The initial cut was a 25 basis points (bps) reduction on June, followed by similar cuts in September, October, and December. These rate changes were prompted by inflation reaching the ECB's target of 2% in October, supported by declining commodity prices and normalized supply chain pressures. Meanwhile, the Federal Reserve (FED) also adjusted its policies, cutting rates three times, starting with a substantial 50 basis point reduction in September, and followed by two further cuts of 25 basis points in November and December, bringing the target interest rate range to 4.25%-4.5%. This decision was influenced by a slowing labour market, rising unemployment, and easing inflation in the U.S., which paved the way for a more flexible monetary policy. On the political front, the most anticipated event of the year, the American elections, created some uncertainties but Donald Trump election reassured the markets even though investors are now concerned about the impact of future trade tensions on inflation and the Fed's monetary policy. In Europe, the political landscape was turbulent, particularly in France, where President Macron's call for snap elections and the following non-confidence motion against Barnier's government increased uncertainty, contributing to market volatility. Germany faced challenges as growth was muted for the second year in a row and the industrial sector is expected to see production fall for the third consecutive year. Higher energy prices, stricter regulations and under-investment over the years reduced the competitive advantage the country had in the past. Geopolitical tensions, particularly in the Middle East and Ukraine, continued to impact energy prices and supply chains, fuelling uncertainties on the markets. In this context, the fund generated positive total and relative returns in 2024. Relative contribution from rates and credit was positive. Government bond yields were volatile, hence our tactical duration trades were additive. Yield curve positioning detracted, in particular our steepeners on EUR curve introduced too early in Q1 2024, but finally delivered performance into year-end.

Amundi (UK) Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Euro Corporate Fixed Income FAM Fund (the "Sub-Fund")

In 2024, the global economic landscape was significantly shaped by evolving monetary policies and interest rate adjustments. The European Central Bank (ECB) shifted to a more accommodative stance, cutting interest rates mid-year to stimulate growth amid moderating inflation and economic slowdown. This led to a notable decline in yields across the eurozone, with the 10-year German Bund yield reaching historic lows. The debt market experienced robust activity, driven by increased issuance from both sovereign and corporate entities capitalizing on lower borrowing costs. Corporations actively refinanced existing debt and pursued expansion projects, particularly in the investment-grade sector. However, the high-yield segment faced challenges as credit spreads widened due to concerns over economic growth. The euro credit bond market demonstrated resilience, with strong demand for euro-denominated bonds. Investment-grade bonds outperformed, while sectors such as technology and renewable energy attracted significant investment. Overall, 2024 was marked by a critical shift in monetary policy, declining interest rates, and active debt markets, presenting both challenges and opportunities for professional investors. We always were with a beta of more than 1.25 during 2024 and we managed the duration related to the evolution of the yields in Europe, we participated a lot to primary market and take advantage of it. financial sector is still our favorite exposure in IG mostly in Subordinated. Looking ahead, the European Investment Grade market should benefit from confirmed investor interest, underpinned by accommodative monetary policies, attractive yields and solid business fundamentals. Nevertheless, several risks remain, particularly in markets exposed to political instability, such as France, where prolonged uncertainty could lead to a widening of domestic banking spreads. In addition, the unpredictability surrounding President Trump's potential tariff policies and their implications for global trade, as well as fiscal stimulus measures that could reignite inflationary pressures, adds to the complexity of the landscape. We maintain an optimistic outlook on the asset class, characterized by a beta of around 1.35 and a duration of around 4.5 slightly above the benchmark level. In light of current political events, we have gradually reduced our exposure to French banks. In addition, we have adopted an overweight position in the 5-year segment of the credit curve, while anticipating a normalization of the yield curve thanks to our yield curve steepening strategy. This implies an overweight in the 1-3 year segment and an underweight in longer maturities.

Amundi (UK) Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Euro Short Duration Bond FAM Fund (the "Sub-Fund")

The fund achieved a positive return but underperformed the index by 5 basis points on a gross basis. The credit strategy, particularly our allocation strategy, and the stable yield component were key drivers of performance, while the fund's curve positioning detracted from gains. In the credit space, we were overweight in credit beta until the end of the period, and credit spreads also tightened. Our significant overweight to financials added 78 basis points, with our exposure to Commerzbank and Deutsche Bank being particularly beneficial, collectively adding 34 basis points to relative gains. Additionally, our allocation to property, consumer non-cyclical, energy, and tech & communication sectors also added value. Conversely, our exposure to quasi-sovereign, other financials, and utility names weighed on performance. The fund's lack of exposure to Italian and Spanish government bonds also detracted from gains. On an individual issuer basis, apart from financial names, our exposure to Telefonica and Bayer was particularly beneficial, while our holdings in Thames Water Utility negatively impacted the fund's performance. In terms of the term structure, the fund maintained an overweight duration position, with a relative effective duration of 0.9 years. The fund's tactical long USD duration contributed 46 basis points to relative gains, while our long EUR duration position negatively impacted performance and more than offset the gains. In terms of maturity, our positioning at the front end and 4-year tenors added the most value, whereas our positioning at the 2-year maturity more than offset the gains.

Schroder Investment Management Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Fineco AM European Corporate Bond Fund (the "Sub-Fund")

Over 2024, credit spreads compressed, finishing the year at tights. With credit spreads trading in a narrow range, any meaningful sectoral divergence gave way as investors looked to capture incremental spread pick up across higher beta sectors.

This dynamic can be attributed both to constructive sentiment on credit fundamentals, but also supportive market technicals. Easing monetary policy and expectations around rate cuts prompted investors to continue rotating from Money Market type of funds into the credit market. This additional and ongoing demand combined with limited primary market supply in the final months of the year, thereby fueling spread tightening. From a credit fundamentals perspective, on average, corporate balance sheets are reflecting an improving fundamental trajectory, albeit with some margin weakness.

Overall, with compressed valuations and a flat credit curve, the Fund focused on credit selection. Performance was driven by a positive selection effect, and overweights in the Financials segment.

Actively managed exposures to Real Estate and Insurance names, contributed to overall performance, as the sector was well placed to benefit from the spread compression theme.

Conversely exposure to longer dated Utilities and Industrials weighed, with both sectors being impacted by phases of rates volatility.

Tactical participation in new transactions has been an important contributor to performance throughout the year. Not only do new deals represent compelling entry points in terms of premium to secondary curves, active primary markets can bring additional trading liquidity to secondary markets – allowing for cost effective switching trades.

Given compressed spreads, trading activity tended to focus on relative value opportunities, with selected focus on short-dated crossover issuers for carry purposes. Going forward, we believe that carry will represent a significant driver of total return, with compelling opportunities from issuers in the crossover space (i.e. selective short dated high yield securities).

FAM Series UCITS ICAV

Investment Manager's Report (continued)

M&G Optimal Income FAM Fund (the "Sub-Fund")

The review period was marked by declining inflation and resilient economic growth, which facilitated tighter spreads although maintaining relatively elevated interest rates. In this environment, the portfolio generated positive gross returns but these lagged its index, primarily due to its duration positioning. In terms of credit, performance was negative, mainly our security selection. Our allocation to high-yield and emerging market bonds detracted the most, whereas our overweight positioning in investment-grade corporates and financials benefited relative performance. We maintain an overweight duration positioning at approximately 7.0 years compared to the benchmark's 5.6 years. In the US, as yield curves have generally been flattening since October, we are shifting our allocation from longer-dated bonds to mid-dated ones. In credit, spreads remain historically tight, prompting us to maintain a cautious stance and seek opportunities to reduce risk where we find securities trading at tight spreads relative to their fundamentals.

Investment Manager's Report (continued)

Schroder Euro Bond FAM Fund (the "Sub-Fund")

Bond markets fell in the early part of the year as disinflation stalled and the Fed (and other central banks) held off from cutting interest rates as quickly as investors had expected. But the cycle finally started moving in June with the ECB cutting rates, the BoE following in August, and the Fed delivering a 50bp rate cut in September, by which point bond markets had rallied strongly through the summer. This market move was mostly reversed in Q4, however, as concerns increased about the impact on inflation of the incoming US administration's potential policy choices. The portfolio returned positive performance and outperformed the benchmark in 2024. The portfolio's credit allocation was the biggest contributor to outperformance, with high-quality credit sectors such as covered bonds (predominantly in Europe) and US Agency mortgage-backed securities generating strong performance. Allocations to European government agencies was also positive over the year. Positioning in investment grade corporates, focusing on financials was beneficial. Credit spreads moved lower as the ECB increased their commitment to cutting rates in the second half of the year. Rates positions were slightly negative. In the context of the market movements above, headline duration in the portfolio was moved slightly short vs benchmark in response to the rally in the summer, and then long as the market sold off in Q4 – but in both cases our change in positioning was too early and the market continued to move against us.

Against this, several rates strategies contributed positively: particularly cross-market trades overweight the UK (and other markets) against the US. A long the UK vs Europe position and outright exposure to emerging markets duration, through Mexico, was beneficial through the first half of the year. Strategy Our macroeconomic view throughout 2024 has been that a 'soft landing' environment - where inflation recedes, and growth holds up – would generally dominate. But while a soft landing implies a modestly positive view on overall duration, pricing of government bonds at different points in the year, plus the significant probability we assigned to a potential 'no landing' environment (where interest rates stay high for longer due to persistent inflation), tended to temper our appetite for outright duration risk. This meant that headline duration was kept relatively close to benchmark throughout the year. The portfolio was marginally overweight duration in the first half of the year, particularly in the US (supported by signs of softer inflation data and weaker labour market indicators), which helped performance. In July though, the portfolio's slight underweight in the US in response to the bond market's strength had a negative impact as markets continued to rally. With the Fed becoming more aggressively dovish we moved duration longer in Q3, via European and Australian bonds, before pulling this risk back in October to shield the portfolio from heightened market uncertainty in the final days before the US election. As markets sold off again in Q4 we moved headline duration more meaningfully overweight. But while the rising 'No Landing' probability in our scenario framework kept us wary of the US market, our favoured markets of the UK and Australia (as well as emerging markets exposure) were also dragged downwards by the strength of the dynamics in the US.

Since it was challenging to develop conviction on headline duration, rates trades in 2024 were more focused on country and curve positions. Curve steepeners, mostly in the US but also in the UK and in Canada, produced mixed results. But a number of cross-market trades through the year were beneficial for the portfolio's performance. In the first half of the year we had growing conviction in an underweight to Germany. While the ECB's June rate cut was well-telegraphed in advance, it increasingly looked like the market was being overly optimistic over the pace of further easing thereafter. We expressed this through an underweight to Germany versus both the US and the UK, taking profit towards the end of Q2. Elsewhere, we saw value in an underweight position in Canada, held against both Australia and the US. We closed the position in June, when inflation unexpectedly started to surprise to the downside, allowing the Bank of Canada to cut interest rates. Further cross-market opportunities were captured during the summer. We initiated a tactical overweight to Australia vs the US on the view that sluggish growth and rising unemployment in Australia gave scope for its bond market to outperform, and subsequently closed the position at a profit. Ongoing political uncertainty in France led us to implement a tactical overweight position versus Germany, although this did not perform as expected and was closed at a loss. The UK was our favoured bond market in the latter part of the year. Despite a weakening growth outlook, and a BoE clearly biased towards rate cuts, gilts had underperformed as inflation remained sticky and the market expressed scepticism around the new Labour government's fiscal plans. These left gilts looking underpriced and - following the US election - we implemented a long UK vs US position. The portfolio retained an overweight to European credit throughout the year, reflecting the additional potential return over government bonds. In response to increasingly tight corporate bond spreads, later in the year we trimmed exposure from European corporates to increase the tactical off-benchmark position in US Agency MBS, which currently represents the most attractive area of the credit universe.

While bond markets have had a tough final quarter of 2024, the global macro-economic environment has not fundamentally altered its course in the last few weeks. The key trends as we move into 2025 are towards stronger data in the US, but rather worse business sentiment in Europe and the UK. Business sentiment has been souring on the European side of the Atlantic, as the Eurozone contends with a combination of cyclical and structural challenges. We have little confidence in seeing much of a rebound here, given that the ominous threat of the US imposing tariffs on imports will weigh on major capital expenditure decisions and could therefore limit any improvements in the European manufacturing

FAM Series UCITS ICAV

Investment Manager's Report (continued)

sector in coming months. The service sector appears to be losing momentum too: this will help focus the minds of the European Central Bank as they consider how the path of interest rates should develop, following their 25bp cut in December. All that said, given the depressed current state of global manufacturing, it is frankly difficult to see European manufacturing sentiment getting much worse, absent the emergence of an actual recession. At least with this backdrop any global rebound in manufacturing is likely to remain limited, keeping a lid on commodity price gains, and helping inflationary pressures stay contained. Firms in the UK have been demonstrating only limited ability to grow, and survey data continues to be slightly weaker, particularly with reference to the labour market. The October Budget has been a factor here, weighing on UK sentiment with the likely impact of depressing private sector hiring in the near term. But private sector pay growth data came in higher than expected, and price pressures remain robust, giving the UK a lingering inflation challenge and leading the Bank of England to hold interest rates in December, having cut in November. The BOE is anticipating cuts to progress on a quarterly basis from here. The market, however, has been revising down expectations given the slightly better data: at the start of December the market expected two full 25bp cuts by next June (i.e. in line with the Bank's "quarterly" expectations) but by the year-end pricing had moved to imply one cut and only a 50% chance of a second.

In the US, in contrast, we have noted the recent meaningful signs of improvement in the manufacturing cycle, and we expect to see further positive survey data points as businesses continue to adjust to a new pro-business and de-regulatory agenda. At the same time, disinflation momentum in the US has largely stalled, which argues for a much shallower cutting cycle from the Federal Reserve (the Fed) as we move through the new year. On top of this, the new Trump administration's largely pro-inflationary agenda is likely to remain a significant factor. Market movements in December reflected the potential for tariff-related price rises in the global economy, as well as the possible tightening of the US labour market thanks to immigration restrictions and deportations. In practice there have already been some tentative signs that the labour market is tightening again: we observe that US corporate profit growth continues to be positive, historically a constructive signal for jobs. Essentially, the downside risks to the US economy from a weaker labour market appear to be diminishing, which will ease any remaining recession concerns at the Fed. We made no changes to the probabilities in our scenario framework during December, with our base case remaining a global "soft landing" of steady growth and controlled inflation. The risks, however, remain skewed in the direction of a more hawkish, higher interest rate, "no landing" environment. The stalling of the disinflation process in the US, the release of pent-up demand in the form of business spending now that the US election is out of the way, and the potential policy-driven inflation risks all help justify this probability. The imminent arrival of the new US administration is grounds for much uncertainty as we move into 2025. But, as ever, the resulting shifts in economic dynamics impact different areas of the bond markets in different ways, providing us with the opportunities that allow our investment process to generate performance for our clients in fixed income.

Schroder Investment Management Limited

FAM Series UCITS ICAV

Investment Manager's Report (continued)

European Equity FAM Fund (the "Sub-Fund")

Despite declining Purchasing Managers' Indices (PMIs), political uncertainties in France and Germany, Trump's re-election in the US, and ongoing geopolitical tensions between Ukraine and Russia, European equity markets have delivered returns of over 8% in 2024. However, this is significantly behind the outcome achieved by global and US markets. Europe's manufacturing PMI has been below the expansionary threshold of 50 for over two years and services PMIs have been slowing down, owing to data from Germany and France. While there are some positives such as a relatively resilient consumer and a stable jobs market, and the European Central Bank (ECB)'s easing stance on inflation, the weak economic picture has meant that the debate continues around the pace and scale of the ECB's monetary easing.

The portfolio (gross of fees, in euros) returned 3.68% while the MSCI Europe Index returned 8.59%. From a sectoral perspective, holdings across the financials and consumer staples sectors were a notable source of weakness. Performance within health care was mixed as stock selection across life sciences & tools, and pharmaceutical sub-sectors offset the gains from the overweight and underweight allocations to the sub-sectors, respectively. Meanwhile, holdings across software and materials supported relative performance. Looking specifically at the negative stock selection and the main companies that have detracted from the fund's relative performance, among the bottom 10 are high-quality companies with strong fundamentals such as LVMH, Dassault Systèmes, L'Oréal, Edenred and Tecan. The main reasons for these companies' underperformance have resulted from factors we consider temporary, and we anticipate that they should start to show operational recovery over the coming months. Looking at history, after a period of underperformance, these companies have usually improved their relative performance due to strong fundamentals and growth prospects. Moreover, these companies are traded on trough valuation multiples combined with low expectations. Consequently, we have used opportunities to increase positions in some of these stocks. Edenred, a leading digital platform for services and payments, has been the biggest detractor from performance due to the impact of two moderate controversies: in France about regulation change risk, and in Italy about a specific public tender. The quality of the company's responses to controversies has been satisfying and should allow the stock to renew performance over time. The underlying performance of the business has continued to be convincing as evidenced by strong revenue and earnings growth.

Life sciences tool company Tecan issued profit warnings in August and October, mainly attributable to the weakness in its life science instrument segment and lower demand from China. We consider the demand weakness temporary while medical diagnostics and automation of laboratory workflows are secular growth trends from which Tecan should benefit. French software company Dassault Systèmes issued underwhelming FY2024 guidance as its transition to a subscription-based model will result in some temporary pressure on the company's financials. Five years ago, Dassault acquired Medidata, a clinical trial software business. Although this segment did well during Covid, it has since struggled given reduced funding in the biotechnology sector. Dassault also lost share to a competitor in this space, Veeva, by pushing pricing too aggressively. Beauty products leader L'Oréal and luxury conglomerate LVMH declined after reporting lower-than-expected sales caused by a tougher consumer environment in China. With their strong market positions, we think they will return to better growth in 2025 combined with easier prior year comparables coupled with attractive valuation levels. Notable contributors to relative performance include enterprise software business SAP, energy technology company Siemens Energy, reinsurer Munich Re and eyewear business EssilorLuxottica. Shares in SAP received a boost after CEO Christian Klein reiterated the FY 2025 outlook, and signalled growth acceleration in 2026 and 2027. Investors also reacted positively to the company's acquisition of digital adoption platform provider WalkMe to boost SAP's artificial intelligence offerings. Siemens Energy benefitted from strong quarterly results with orders coming in ahead across divisions as well as encouraging margins. EssilorLuxottica's core business continues to perform well while management is also cautiously optimistic on the Sun portfolio in the US, seeing signs of recovery from trading in the last couple of months. Additionally, important R&D launches are scaling well including the partnership with Meta.

Investment Manager's Report (continued)

Fineco AM Global Premium Equities Fund (the "Sub-Fund")

The fund returned 18.31% in absolute terms, net of fees for 2024.

Over 2024, global equity markets delivered a strong performance, with the U.S. leading gains amid a backdrop of evolving monetary policy, robust economic resilience, and shifting political landscapes. The S&P 500 advanced by 23.3% in USD terms, marking its best two-year run since the late 1990s. Much of the rally was driven by technology stocks, particularly the so-called "Magnificent 7"—Apple, Microsoft, Nvidia, Amazon, Meta, Alphabet, and Tesla—whose dominance continued to shape market behaviour. However, while U.S. equities soared, other regions exhibited more mixed outcomes, reflecting divergent economic and policy trends. As the first quarter of the year unfolded, markets surged on the back of optimism surrounding easing inflation and anticipated Federal Reserve rate cuts. The UE equity markets climbed steadily, supported by AI-driven enthusiasm and sustained growth in cloud computing. However, market breadth remained narrow, with technology megacaps significantly outperforming other sectors. Political uncertainty surrounding fiscal policy, particularly debates over tax reforms and regulatory shifts, added a layer of caution to market participants, though risk appetite remained strong. Moving into the second quarter of 2024, equities continued to rally as macroeconomic data confirmed a resilient U.S. economy. Inflationary pressures moderated, increasing confidence in a soft landing. The Federal Reserve maintained a cautious stance but hinted at potential rate cuts later in the year, providing a boost to investor sentiment. Meanwhile, energy and industrial stocks outperformed amid supply-side constraints and rising demand. Growing geopolitical tensions, including trade frictions with China, created periodic market jitters, though investors largely focused on the supportive economic backdrop. The third quarter brought a resurgence of volatility as markets digested shifting Federal Reserve policy expectations and corporate earnings data. The first rate cut in September initially provided a boost to equities, but concerns over valuation levels, particularly in the technology sector, led to a more uneven performance. At the same time, the approaching U.S. presidential election intensified political uncertainty, with potential implications for taxation, regulation, and trade. Investor sentiment remained cautiously optimistic but reflected increased hedging against potential policy shifts.

By the final quarter of the year, markets rebounded, buoyed by the re-election of Donald Trump, which introduced both optimism and caution. Prospects of tax reductions and deregulation lifted investor sentiment, particularly in energy and financials, while the technology sector retained its leadership. However, concerns over renewed trade tensions and potential tariffs under the new administration weighed on certain multinational stocks, particularly in manufacturing and exports. While U.S. markets led global gains, European equities delivered more measured returns. Stabilising inflation and a gradual economic recovery supported indices such as the Euro Stoxx 50, though growth remained subdued compared to the U.S. The European Central Bank held rates steady for much of the year, opting for a cautious stance amid lingering recession risks in key economies such as Germany. In Japan, equity markets reached multi-decade highs, with the Nikkei 225 posting strong double-digit gains. Corporate governance reforms, a weaker yen, and sustained foreign investment helped fuel optimism, while the Bank of Japan maintained an accommodative policy stance despite tentative steps toward rate normalization. Emerging markets, however, saw mixed fortunes. Chinese equities struggled, weighed down by a faltering economic recovery, persistent property sector woes, and regulatory uncertainty. In contrast, the Indian market in particular performed strongly, benefiting from domestic economic expansion and steady foreign inflows.

The strategy was overweight inflation sensitive sectors such as Materials and Energy, also overweight Consumer Staples, and Healthcare more defensive sectors. On the other hand, the Fund was also underweight Information Technology and Communication Services.

From a sector allocation perspective, the underweight positions in Industrials and Financials were the two single largest contributors. The worst contributors were IT and Consumer Staples. Stock selection particularly in Industrials, Financials and Materials (Gold miners) contributed positively to the fund performance whereas the lack of ownership of Nvidia in particular in IT was a c 200bp detractor.

From a stock perspective, positive contribution to performance was diverse, ranging from beneficiaries of European rearmament like Rheinmetall, semiconductor beneficiaries of AI such as Broadcom, beneficiaries of electrification such as Hitachi and Financial Services companies such as Goldman Sachs and American Express which are expected to benefit from a more de-regulatory environment in the US post Trump election victory. On the negative side, Samsung trailed behind other IT holdings such as Micron and under-performed peers in developing the latest memory chips, while Bayer suffered from lower grain prices and de-stocking plus a re-emergence of litigation concerns. Schlumberger under-performed due to a combination of some operational missteps and slower ramp of a number of projects while turmoil in the UK was a negative for BarrattRedrow. Heineken suffered from slower growth post price hikes in 2023 which led to a de-rating.

Meanwhile, energy and industrial stocks outperformed amid supply-side constraints and rising demand. Growing geopolitical tensions, including trade frictions with China, created periodic market jitters, though investors largely focused on the supportive economic backdrop. The third quarter brought a resurgence of volatility as markets digested shifting Federal Reserve policy expectations and corporate earnings data. The first rate cut in September initially provided a boost to equities, but concerns over valuation levels, particularly in the technology sector, led to a more uneven performance. At the same time, the approaching U.S. presidential election intensified political uncertainty, with potential implications for taxation, regulation, and trade. Investor sentiment remained cautiously optimistic but reflected increased hedging against potential policy shifts.

By the final quarter of the year, markets rebounded, buoyed by the re-election of Donald Trump, which introduced both optimism and caution. Prospects of tax reductions and deregulation lifted investor sentiment, particularly in energy and financials, while the technology sector retained its leadership. However, concerns over renewed trade tensions and potential tariffs under the new administration weighed on certain multinational stocks, particularly in manufacturing and exports. While U.S. markets led global gains, European equities delivered more measured returns. Stabilising inflation and a gradual economic recovery supported indices such as the Euro Stoxx 50, though growth remained subdued compared to the U.S. The European Central Bank held rates steady for much of the year, opting for a cautious stance amid lingering recession risks in key economies such as Germany. In Japan, equity markets reached multi-decade highs, with the Nikkei 225 posting strong double-digit gains. Corporate governance reforms, a weaker yen, and sustained foreign investment helped fuel optimism, while the Bank of Japan maintained an accommodative policy stance despite tentative steps toward rate normalization. Emerging markets, however, saw mixed fortunes. Chinese equities struggled, weighed down by a faltering economic recovery, persistent property sector woes, and regulatory uncertainty. In contrast, the Indian market in particular performed strongly, benefiting from domestic economic expansion and steady foreign inflows.

On a sector allocation basis, the portfolio was underweight Consumer Discretionary and slightly underweight Information Technology, whilst being overweight sectors Health Care and Consumer Staples. The greatest contributors to performance came from the overweight in Healthcare and underweight in Real Estate, while the underweight in IT and overweight in Industrials were the main detractors.

From a stock perspective, large cap technology names such as TSMC, Broadcom, Google, ServiceNow and Oracle led the performance of the fund as the AI theme dominated markets.

On the negative side, weak performance came from diverse sources including Renesas following very strong 2023 performance, weaker emerging market growers such as Telkom Indonesia and indeed consumer staples such as Nestle and Heineken detracted from performance while continued demand weakness in European industrial production impacted Brenntag.

During the period, the fund added positions in Amazon, American Tower Corp, Amgen, Baidu, Barry Callebaut, Builders Firstsource, Goldman Sachs, Huntington Bancshares, MercadoLibre, Ryanair, Teck Resources. On the other hand the fund exited Air Liquide, Alcon Inc, Booking Holdings, L'oreal and Linde.

Investment Manager's Report (continued)

Fineco AM Euro Corp Bonds Fund (the "Sub-Fund")

Over 2024, credit spreads compressed, finishing the year at tights. With credit spreads trading in a narrow range, any meaningful sectoral divergence gave way as investors looked to capture incremental spread pick up across higher beta sectors.

This dynamic can be attributed both to constructive sentiment on credit fundamentals, but also supportive market technicals. Easing monetary policy and expectations around rate cuts prompted investors to continue rotating from Money Market type of funds into the credit market. This additional and ongoing demand combined with limited primary market supply in the final months of the year, thereby fueling spread tightening. From a credit fundamentals perspective, on average, corporate balance sheets are reflecting an improving fundamental trajectory, albeit with some margin weakness.

Overall, with compressed valuations and a flat credit curve, the Fund focused on credit selection. Performance was driven by a positive selection effect, and overweights in the Financials segment.

Actively managed exposures to Real Estate and Insurance names, contributed to overall performance, as the sector was well placed to benefit from the spread compression theme.

Conversely exposure to longer dated Utilities and Industrials weighed, with both sectors being impacted by phases of rates volatility.

Tactical participation in new transactions has been an important contributor to performance throughout the year. Not only do new deals represent compelling entry points in terms of premium to secondary curves, active primary markets can bring additional trading liquidity to secondary markets – allowing for cost effective switching trades.

Given compressed spreads, trading activity tended to focus on relative value opportunities, with selected focus on short-dated crossover issuers for carry purposes. Going forward, we believe that carry will represent a significant driver of total return, with compelling opportunities from issuers in the crossover space (i.e. selective short dated high yield securities).

Investment Manager's Report (continued)

Flexible Equity Strategy FAM Fund (the "Sub-Fund")

The year 2024 was characterized by a positive tone in the markets, with the main protagonists being the more accommodating central banks and geopolitical tensions. Global stock markets recorded excellent performances, with the MSCI All Country World index rising by +18.0% (in euro), although regional and sectoral performances varied significantly throughout the year.

The year started on a positive note, as markets benefited from diminishing fears of recession in the United States and encouraging economic data. Inflationary pressures gradually eased, paving the way for central banks to start cutting rates. The European Central Bank (ECB) and the Swiss National Bank (SNB) were the first to cut rates, while the US Federal Reserve initially remained more cautious. However, in September, the Fed implemented the first rate cut of 50 basis points following greater weakness in labor markets and moderation in inflation. Japan also contributed to monetary policy surprises, counter-trend it raised rates twice during 2024. Political developments throughout the year were numerous, primarily the outcome of the elections in the United States gave strong support to the market in the second half of the year, on market expectations of more growth stimuli from the Trump administration, while Europe had to face different problems related to the instability of coalitions in Germany and France. Finally, geopolitical tensions in the Middle East and China's economic measures further influenced investor sentiment; the latter adopted aggressive stimulus measures to counter its own economic slowdown. In the equity sector, US stocks outperformed both Europe and emerging markets, supported by the resilience of the economy and the post-election rally after Donald Trump's victory in November. The S&P 500 gained +25.0% in USD for the year. European markets suffered compared to America, with the MSCI Europe index recording +9.2%, given the greater weakness of the economy and political uncertainties. A similar situation for emerging markets, the latter were under pressure due to the weakness of the Chinese markets which negatively weighed on the MSCI Emerging Markets index, which still closed in positive territory (+8.0% in USD).

From a sectoral point of view, Information Technology and Communication Services dominated throughout the year, while defensive sectors such as Health Care and Consumer Staples lagged behind. On the style side, the growth and momentum factor outperformed the value and low volatility style. The government bond sector was characterized by a lot of volatility especially in America, with government bond yields rising by 50bps on fears of higher than expected inflation following stronger economic growth especially after Trump's victory. The 10-year yield in the United States rose from 3.92% to 4.57%, while that of Germany went from 2.06% to 2.36%. Despite the increase in yields, corporate bonds achieved positive performance with a strong compression of spreads; in particular, the High Yield and Emerging Markets sectors outperformed the Investment Grade sector. The European and American High Yield component was among the best asset classes of 2024 along with equities and gold. On the currency side, the US dollar performed excellently against the main global currencies; against the Euro, it closed 2024 at +7.0% in the 1.035 area, benefiting from the positive economic growth differential for America and the rise in rates. As for commodities, oil prices recorded some volatility but closed slightly higher, supported by global demand and geopolitical tensions. Gold stood out for its performance, rising above 2,600 dollars per ounce, driven by demand from central banks and economic uncertainty.

In 2024, the Fund achieved a positive performance, supported by the strong rally in the stock markets, especially regarding the high-capitalization American technology component. In sectoral terms, Information Technology, Financials, and Industrials provided the most significant contribution to performance. The weight of equities was around 55% during 2024, slightly reduced compared to the beginning of the year. At the same time, exposure to the European stock market was reduced in favor of greater exposure to US companies due to the growth differential between the two geographical areas that intensified during the course of the year in favor of the US, supported by the positive trend on artificial intelligence. A positive contribution in the equity component, especially in the second part of the year, also came from stocks most exposed to the Dividend factor, which outperformed the rest of the stock market. The short-term bond component also provided a positive contribution. As of December 31, 2024, the weight of equities was 54.4%, and the main sectors were Information Technology, Financials, and Industrials. The equity compartment was invested in the USA and Europe, with an overweight on the American stock market.

Vontobel Asset Management AG
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Fineco AM Investment Grade Euro Aggregate Bond Fund (the "Sub-Fund")

Overall, Euro the FAM IG Euro aggregate Bond fund produced positive returns over 2024. The year had begun negatively. Bonds were impacted by sticky inflation, which while falling, was not falling quickly enough towards central bank targets to justify easing monetary policy. The resilience of the US economy was a key driver of the reflation trade and market commentators observed the robustness of economies in a higher rate environment. As we progressed through the year, absolute bond returns improved as key components within the index such as Italy and Spain began to outperform and core sovereigns such as Germany began to gain more positive traction. The selloff in bonds which began at the beginning of December did detract from absolute bond performance, although our underweight duration positions in that Q4 period did help with relative returns.

Politics also had a clear impact on European bonds, as Macron's decision to call a snap election on the 10th of June caused French government bonds, typically a core safe haven bond market to weaken relative to Germany and to other sovereigns. Our Fund had been overweight French bonds both through sovereign and credit exposure. A decision was made to reduce French holdings and to add back incrementally. The Euro aggregate bond fund was active with strategies across duration, curve, cross market, FX and inflation during the year.

We also started to see stronger relative performance from the fund in Q4 as key longer term macro strategies began to move in our favour. For example, the long-held view that the US curve would begin to steepen, a view with high conviction but only beginning to move in Q4. Similarly, the duration short in Japanese bonds begun to bear fruit as the Bank of Japan began to hike interest rates. Both strategies are examples of views backed by long term valuation considerations. Both the US curve and Japanese yields were at multi-year extremes when we introduced them.

The view to be overweight Sovereign spread risk through Italy and Spain also provided more modest outperformance which came to fruition in Q4. The credit positions on FAM0005 helped offset negatives from duration and curve. The ECB initiated its easing cycle in June 2024 even as inflation remained clearly above target, which was a positive for the asset class and we saw this boost in H2

Conversely exposure to longer dated Utilities and Industrials weighed, with both sectors being impacted by phases of rates volatility.

Tactical participation in new transactions has been an important contributor to performance throughout the year. Not only do new deals represent compelling entry points in terms of premium to secondary curves, active primary markets can bring additional trading liquidity to secondary markets – allowing for cost effective switching trades.

Given compressed spreads, trading activity tended to focus on relative value opportunities, with selected focus on short-dated crossover issuers for carry purposes. Going forward, we believe that carry will represent a significant driver of total return, with compelling opportunities from issuers in the crossover space (i.e. selective short dated high yield securities).

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Fineco AM Global Equities Income Fund (the "Sub-Fund")

The fund returned 15.22% in absolute terms, net of fees for 2024.

Over 2024, global equity markets delivered a strong performance, with the U.S. leading gains amid a backdrop of evolving monetary policy, robust economic resilience, and shifting political landscapes. The S&P 500 advanced by 23.3% in USD terms, marking its best two-year run since the late 1990s. Much of the rally was driven by technology stocks, particularly the so-called "Magnificent 7"—Apple, Microsoft, Nvidia, Amazon, Meta, Alphabet, and Tesla—whose dominance continued to shape market behaviour. However, while U.S. equities soared, other regions exhibited more mixed outcomes, reflecting divergent economic and policy trends. As the first quarter of the year unfolded, markets surged on the back of optimism surrounding easing inflation and anticipated Federal Reserve rate cuts. The UE equity markets climbed steadily, supported by AI-driven enthusiasm and sustained growth in cloud computing. However, market breadth remained narrow, with technology megacaps significantly outperforming other sectors. Political uncertainty surrounding fiscal policy, particularly debates over tax reforms and regulatory shifts, added a layer of caution to market participants, though risk appetite remained strong. Moving into the second quarter of 2024, equities continued to rally as macroeconomic data confirmed a resilient U.S. economy. Inflationary pressures moderated, increasing confidence in a soft landing. The Federal Reserve maintained a cautious stance but hinted at potential rate cuts later in the year, providing a boost to investor sentiment. Meanwhile, energy and industrial stocks outperformed amid supply-side constraints and rising demand. Growing geopolitical tensions, including trade frictions with China, created periodic market jitters, though investors largely focused on the supportive economic backdrop. The third quarter brought a resurgence of volatility as markets digested shifting Federal Reserve policy expectations and corporate earnings data. The first rate cut in September initially provided a boost to equities, but concerns over valuation levels, particularly in the technology sector, led to a more uneven performance. At the same time, the approaching U.S. presidential election intensified political uncertainty, with potential implications for taxation, regulation, and trade. Investor sentiment remained cautiously optimistic but reflected increased hedging against potential policy shifts.

By the final quarter of the year, markets rebounded, buoyed by the re-election of Donald Trump, which introduced both optimism and caution. Prospects of tax reductions and deregulation lifted investor sentiment, particularly in energy and financials, while the technology sector retained its leadership. However, concerns over renewed trade tensions and potential tariffs under the new administration weighed on certain multinational stocks, particularly in manufacturing and exports. While U.S. markets led global gains, European equities delivered more measured returns. Stabilising inflation and a gradual economic recovery supported indices such as the Euro Stoxx 50, though growth remained subdued compared to the U.S. The European Central Bank held rates steady for much of the year, opting for a cautious stance amid lingering recession risks in key economies such as Germany. In Japan, equity markets reached multi-decade highs, with the Nikkei 225 posting strong double-digit gains. Corporate governance reforms, a weaker yen, and sustained foreign investment helped fuel optimism, while the Bank of Japan maintained an accommodative policy stance despite tentative steps toward rate normalization. Emerging markets, however, saw mixed fortunes. Chinese equities struggled, weighed down by a faltering economic recovery, persistent property sector woes, and regulatory uncertainty. In contrast, the Indian market in particular performed strongly, benefiting from domestic economic expansion and steady foreign inflows.

The strategy was overweight inflation sensitive sectors such as Energy, also overweight Consumer Staples, a more defensive sector. The strategy was underweight IT, Financials and Consumer Discretionary. From a sector allocation perspective, the fund benefited the most by being underweight in Financials while being underweight Information Technology was a headwind.

From a stock perspective, positive contributions were largely beneficiaries of the AI investment theme. Strongest contribution came from Broadcom who designs and develops semiconductor chips & software and TSMC who manufacture Nvidia chip. Other beneficiaries on the same theme were Oracle who is implementing AI solutions for large clients. Outside tech, we purchased St James Place, a UK wealth manager which had been under pressure from regulators and under fee pressure believing management had a concrete plan to turnaround the business – which has played out as expected so far. Also in financials, Apollo is perhaps the highest quality alternative asset management company globally and had been hurt by higher interest rates. We bought on expectation of lower rates, less competition and S&P500 index inclusion which played out.

Main detractors were Samsung, where the company has lagged peers such as Micron in the current generation of memory chips, RWE where prospects of offshore wind growth have disappointed, and Brenntag where European industrial weakness has been a headwind. Nestle de-rated following strong performance in 2023 and remains a core holding despite disappointing contribution in 2024. Remy Cointreau is a new name added to the portfolio following a more than 50% fall as luxury spirits de-stocked. With the company trading at less than 1/3rd the value of its inventory, strong balance sheet

FAM Series UCITS ICAV

Investment Manager's Report (continued)

and management, we this is likely to be a long term winner even if current market conditions remain tough.

During the period, the fund added positions in Apollo Global Management, ASML Holdings, China Mengniu Dairy, Dollar General, Dover Corp, Exxon Mobil, Haier Smart Home, HP Inc, Huntington Bancshares, IBM, Kenvue, Lamb Weston, Nestle, Oracle, PKO BP, Qinetiq Group, Remy Cointreau and St Jame's Place. The fund exited BNP Paribas, BT Group, Equinor, Koninklijke Ahold Delhaize, McDonald's, PepsiCo, Proctor & Gamble, Rohm Co, Ross Stores, RWE, TotalEnergies and Woodside Energy Group.

Invesco Global Total Return Bond FAM Fund (the "Sub-Fund")

Global bond markets initially faced headwinds following the release of upside inflation surprises which led investors to dial back expectations for rapid interest rate cuts. By April, however, inflationary pressures began to abate, raising expectations that central banks could soon be cutting rates for the first time since the pandemic. The European Central Bank was the first to act, lowering its main interest rate from an all-time high of 4% to 3.75% in June. In August, the Bank of England cut its key policy rate from 5.25% to 5%. The US Federal Reserve opted for a bigger 0.5% rate reduction in September, pushing the federal funds rate down to a range of 4.75 - 5%. More rate cuts followed. With the UK economy flatlining in the third quarter and wage growth remaining strong, stagflation fears grew. Coupled with increased future government borrowing requirements following the Autumn Budget, yields on longer-dated gilts closed the year significantly higher.

US treasuries also came under late pressure over concerns of financing a widening US fiscal deficit and uncertainties surrounding the inflationary aspect of tariffs following Donald Trump's presidential victory and the Republicans gaining control over both the House of Representatives and the Senate. Against this backdrop, it was a negative year in euro terms for US treasuries and UK gilts. By contrast, Italian government bonds performed strongly and German bunds registered small gains. The ICE BofA Global Corporate Index returned 2.2% (€) in 2024. Credit spreads for global investment grade bonds tightened from 115bps to 88bps. The strongest returns came from high yield bonds with the ICE BofA High Yield Index returning 7.5% (€). Credit spreads for global high yield narrowed from 385bps to 308bps. The portfolio closed the year 2024 with a positive performance equal to 1.76% (based on Bloomberg data, official NAV, institutional - distribution share class as of December 31st, 2024 – IE00BDRT7G59).

March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Nordea Stable Performance FAM Fund (the "Sub-Fund")

The year has been overall positive for most asset classes, despite some volatility spikes and sharp market movements fuelled by macroeconomic and monetary policies' uncertainties and US elections, along with rising geopolitical risks. Among them, the Fed and the ECB have respectively announced 3 and 4 interest rates cuts, meanwhile the BOJ started to exit its multi-year negative rates policy. As such, key central banks interest rates' spread started to tighten. This was supportive for equities and credit, while sovereign debt suffered overall with post US election expectations of higher deficit and sticky inflation, which halved the expected number of interest rates cuts for 2025. In this context, the Nordea Stable Performance FAM posted a positive return of +3.19% (gross of fees).

Equity markets closed December on a diverging note, with Developed Markets significantly outperforming the Emerging ones YTD. Within DM equities, US and Japanese indices have been the best performers, meanwhile EM have been driven by Chinese and Indian indices, with the former having generated most of its return in Q3 following the government new stimulus plan. Style-wise, MSCI World's Momentum factor has massively outperformed, followed by Growth, with Quality being in line with MSCI World, while Value and Low Volatility lagged. This occurred with regional discrepancies, as US Value style's massively underperformed against Growth, meanwhile European Value outperformed YTD. Divergencies have been fuelled by bubbly euphoria on AI, leading to a few expensive stocks driving indices. Sector-wise, Information Technology, Communication Services and Financials have largely outperformed the MSCI All Country Index over the period, while Materials, Energy and Healthcare were the main laggards. So, most of the year has been a continuation of 2023's trends. In this context, our Stable/Low Risk Equities had an overall positive impact. From a more granular standpoint, the equity beta component was positively impacted by markets' rally, but it was partly offset by the Low Risk Value and Quality & Growth long/short components, which generated negative alpha. Actually, it has lagged DM indices on an absolute and a risk adjusted basis, as markets' performance has been driven by expensive or cyclical stocks. Nonetheless, the transparency of our Stable Equities' fundamentals, their attractive valuation and earnings yield versus the general markets, offer a good diversification potential to manoeuvre increasing macroeconomic and geopolitical risks. This is reflected by their robust fundamentals they posted. Our tactical overlay had no impact over the quarter as it has not been allocated, its risk budget being reallocated to other strategies during the fourth quarter of 2022. Within fixed income, the year has started with a broad based disinflation trend, while sovereign yields continued to increase up to Q2 when investors' hopes of a victory against inflation were on the rise. This helped US 10Y yield to decrease by around 1% at 3.6% during mid-September. However, the end of the year was less supportive, as Trump's re-elections has been perceived negatively for govies, as some planned measures (tariffs, tax cuts, immigration...) could reignite inflation and then disincentivize the Fed to announce further cuts. As a result, US and German yield curves flattened on their short ends, the US one being normalized, with US 10Y ending at 4.5% and the European 10Y landing at 2.4%. These movements have been driven by relatively stronger than expected US growth, unemployment rates, and key central banks' changes of monetary policies.

During the period, our exposure to duration increased partly compared to the end of 2023, while we continue to consider US duration's risk-reward profile more attractive. It had a negative impact this year, mainly owed to our long exposure to US Treasuries in Q4 when US yields rose sensibly. Over the period we have had a neutral stance towards tactical credit whose risk budget has been reallocated to the strategic asset allocation, where fundamentals improved noticeably since 2022. Open currency positions in our FX Valuation & Quality strategy had an overall positive impact. After a negative start in H1, the second half has been extremely strong, as the defensive nature of the strategy has benefitted from its long exposure to defensive and high-quality G10 currencies (as USD or JPY) versus more cyclical peers (as EUR, AUD or CAD) among G10 commodity-linked currencies on which we are short. This led to positive alpha and diversification when risk aversion was on the rise, as in July or Q4. The Cross Assets Anti-Beta strategy (with high-quality fixed income futures and G10 currency forwards) has been flat. Finally, the protection it posted in January or July was in line with its long-run behaviour offering downside protection in weak equity markets and negative correlation to risky assets' behaviour.

Nonetheless, it is important to stress the long-term attractive convexity of our currency and cross assets' strategies, as they usually have provided protection in fundamentally driven down markets – stabilizing the portfolio when volatility increased – but they have also a limited impact in up markets. Given the current yield and reflationary environment, both strategies can be efficient alternatives to more traditional fixed income allocations, as both are expected to offer further downside protection in weak equity markets – as witnessed in 2020.

The portfolio's modified duration was partly increased at above 2.3 years over the period, as compared to 2 years at the end of 2023. Similarly, the net equity exposure partly increased from around 54.8% at the end of 2023 to around 60% at the end of December 2024. There were no significant strategic changes over year. The portfolio continues to balance risks coming from Risk-On or aggressive and Risk-Off or defensive return drivers to navigate various market

FAM Series UCITS ICAV

Investment Manager's Report (continued)

environments. In addition, since the end of 2022 the increased return expectations across our strategic strategies continues to support a cut of our Tactical Asset Allocation (as opposed to our Strategic Asset Allocation) components and to re-allocate risk towards the strategic portfolio.

Currency-wise, the fund remains mostly hedged to EUR. When it comes to the portfolio's actively managed currencies in the FX Valuation & Quality strategy, it includes long USD or JPY, as well as short AUD, GBP or NZD. Finally the post hedged EUR stance increased a bit at around 77%, owed to lower USD and JPY open long positions against other high quality G10 currencies including EUR.

Investment Manager's Report (continued)

Fineco AM Euro Credit Bond Fund (the "Sub-Fund")

Over 2024, credit spreads compressed, finishing the year at tights. With credit spreads trading in a narrow range, any meaningful sectoral divergence gave way as investors looked to capture incremental spread pick up across higher beta sectors.

This dynamic can be attributed both to constructive sentiment on credit fundamentals, but also supportive market technicals. Easing monetary policy and expectations around rate cuts prompted investors to continue rotating from Money Market type of funds into the credit market. This additional and ongoing demand combined with limited primary market supply in the final months of the year, thereby fueling spread tightening. From a credit fundamentals perspective, on average, corporate balance sheets are reflecting an improving fundamental trajectory, albeit with some margin weakness.

Overall, with compressed valuations and a flat credit curve, the Fund focused on credit selection over beta compression to realise the best risk adjusted returns. Performance was driven by a positive selection effect, and overweights in the Financials segment.

Performance was supported by exposures to banks such as Deutsche Bank, Intesa and Unicredit. Further, exposure to Real Estate and selected corporate hybrids also supported performance.

Conversely exposure to longer dated Utilities and Industrials weighed.

Tactical participation in new transactions has been an important contributor to performance throughout the year. Not only do new deals represent compelling entry points in terms of premium to secondary curves, active primary markets can bring additional trading liquidity to secondary markets – allowing for cost effective switching trades.

Given compressed spreads, trading activity tended to focus on relative value opportunities, with selected focus on short-dated crossover issuers for carry purposes. Going forward, we believe that carry will represent a significant driver of total return, with compelling opportunities from issuers in the crossover space (i.e. selective short dated high yield securities).

March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Euro High Yield Bond FAM Fund (the "Sub-Fund")

The European High Yield (EHY) bond market experienced a rally this year and outperformed the Euro Investment Grade index, mainly driven by higher income returns and tightening of spreads. The resilient credit fundamentals, robust demand-supply dynamics, and favourable economic conditions have aided in continuous spread tightening over 2024. The corporate results in 2024 demonstrated the resilience of business models, characterized by stable profit margins, leverage ratios, and sustained free cash flows. The favourable interest rate cycle facilitated the increased momentum in refinancing and asset sales, ultimately stabilizing credit profiles. The new issue market remained active, primarily focussed refinancing activities. Inflows accelerated throughout 2024 as investors were drawn to the asset class's attractive income generation abilities. From a monetary policy perspective, the European Central Bank (ECB) cut interest rates four times this year. This move reflects an improvement in monetary policy transmission and a more favourable inflation outlook, as inflation decreased from 2.9% in December 2023 to 2.2% in November 2024 (the year-end increase was largely expected due to base effects, as last year's sharp decline in energy prices is no longer factored into annual rates). However, the recent election of Donald Trump introduced uncertainties, as his proposed policies on immigration and tariffs could significantly affect inflation, central bank actions, and ultimately, European economic growth. The Eurozone economy has also shown positive signs of recovery, expanding by 0.9% year-over-year in Q3 2024, the best performance since Q1 2023. Lower inflation and higher nominal wages have resulted in growth in consumers' real income. However, the reading from the HCOB composite Purchasing Managers' Index (PMI) suggests that business activity remained sluggish. The index grew from 47 in December 2023 to 49 in December 2024 but remained in a contractionary phase, mainly due to weaker performance in the manufacturing sector. The mandate posted positive returns of 9% and outperformed the benchmark, which generated 8.72% during the year. Consistent with the aims of the investment process, security selection strongly contributed to performance. In this respect, underweight stance in technology and communications, coupled with an overweight stance in financials and industrials, lead in terms of contribution to relative returns. Conversely, overweight exposure to property and capital goods sectors led to detracting in relative returns. Interest rate risk was closely in line with the fund's reference index.

FIL Pensions Management AG

March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

European High Yield Bond FAM Fund (the "Sub-Fund")

The year 2024 delivered another strong performance for global high yield markets, supported by stable-to-falling interest rates and an overall benign economic environment. Global high yield (HW00 Index) generated a total return of +8.94%. US High Yield (H0A0 Index) advanced +8.22%, buoyed particularly by the CCC segment, which soared +18.21%. The robust returns in lower-rated debt reflect enhanced risk-taking and the search for higher-yielding opportunities. European High Yield (HP00 Index) gained +8.86%, slightly behind its global counterpart. Within European ratings tiers, B-rated bonds outperformed with a +9.40% return, while BB-rated and CCC-rated tranches returned +8.46% and +8.14%, respectively. Sterling High Yield (HL00 Index) led the way in Europe with a +10.70% return, benefiting especially from the B segment (+14.25%), reflecting investors' continued hunt for yield amid moderating credit concerns. EM High Yield (EMHB Index) outperformed all other regions at +12.53%. Overall, 2024 was marked by strong gains across the high yield spectrum. Investors continued to find value in non-investment-grade bonds, supported by sound corporate fundamentals and lower default rates than originally feared. The high yield market's performance in 2024 highlights the ongoing attractiveness of risk assets and sets a constructive tone heading into the new year.

In the first half of the year, we capitalized on outperforming investments and adjusted holdings in sectors with attractive valuations like pharmaceuticals, telecommunications, and auto parts, adding higher-yielding AT1 bonds. Later on, we reduced exposure to tight trading issues and CCC-rated positions while enhancing credit quality through new issues. We targeted underperforming sectors, acquiring bonds below reoffer prices and rotating into rising stars within the automotive sector. Towards the latter part of H1, we remained active in the primary market, taking profits on well-performing new issues and reducing high-beta AT1s and tight trading cyclicals. In the second half of the year, we reduced outperforming exposures and redeployed proceeds into primary deals in retail, services, insurance, and real estate. We also capitalized on lodging and insurance market corrections. Later on, we trimmed tight-trading AT1/RT1 positions in banks and insurance, participated in new issues in auto, telecom, and other sectors, and scaled back holdings in tight-trading energy. Toward year-end, we further cut high-beta French AT1s. **PERFORMANCE ANALYSIS** The fund underperformed the benchmark by 117bps (gross performance) in 2024. Negative selection effects were only partially offset by positive allocation effects. Within selection, effects in insurance and capital goods were only partly offset by positive selection in banking, tech and leisure. Within allocation, our overweights in both banking and insurance led to positive allocation effects which were only partly offset by negative allocation effects in real estate and retail due to our underweight position within these sectors. **OUTLOOK** Total returns in European high yield were strong in 2024. While all-in yields have come down, they are still elevated and remain attractive on a relative basis given generally sound balance sheets, benign credit ratings, and low defaults. We acknowledge that valuations, as measured by credit spreads, are historically tight but we also appreciate the carry potential of owning higher yielding bonds that we view as having a low risk of default. This can drive total returns in 2025. Overall, we expect global high yield markets will continue to provide an attractive mix of compelling investment opportunities.

We are optimistic that high yield can perform well in 2024 under the backdrop of stable to lower interest rates coupled with an increased likelihood that we can avoid a significant economic slowdown. This can create the over-used term of a "goldilocks" economy for fixed income where investors feel conditions are "just right" and thus should be willing to allocate a larger percentage of investable assets. This does not mean it will be an easy path to navigate as certain sectors and issuers deal with higher leverage and sluggish demand. We remain disciplined in our allocation of risk and stress the importance of diversification but with an ability to adjust key portfolio credit metrics on the margin to reflect a particular investment theme or strategy that we believe will lead to future outperformance.

Vontobel Asset Management AG
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Emerging Markets Debt FAM Fund (the "Sub-Fund")

Emerging market debt posted positive returns in 2024. Over the year, hard currency bonds outperformed local currency bonds. Idiosyncratic narratives were a key driver of market sentiment in 2024, underpinning the outperformance of several distressed issuers and near investment grade sovereigns. The portfolio delivered positive return and was ahead of the benchmark. Our credit allocation drove relative performance over the year. Top relative contributors were government bonds from Argentina, Ukraine and Ecuador, while main relative detractors were bonds from Pakistan, El Salvador and Lebanon. Despite positive growth and improving inflation dynamics within many emerging markets, investor sentiment remains subdued following the recent US election, as there is considerable focus on potential impact of Trump's promised tariffs on emerging markets. The strong US dollar in 2024 is expected to persist into 2025, driven by a robust US economy and a more hawkish Federal Reserve. This strength will likely exert downward pressure on emerging market currencies.

M&G Investment Management Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Vontobel Emerging Markets Debt FAM Fund (the "Sub-Fund")

The latter part of 2024 was all about US elections and more specifically, the personality of its winner, Donald Trump. While in 3Q24 markets largely priced him out of a victory, October started with a quick reversal of those bets. When, in November, the ex-President was unequivocally re-elected and achieved the coveted trifecta (i.e. both chambers of the Congress won by the Republicans), all markets cared about was who, how and how much can win/lose from the new tenant of the White House. As a result, USD was strongly supported (+7.6% on DXY level, amongst the sharpest quarterly move in a decade), UST 10 rates rose from 3.78% (end September, actually not dissimilar to end 2023 levels) to 4.57% on December 31, the speed last observed in 2022 when the Fed massively hiked rates (unlike this time when it's actually cutting them).

Indeed, initial expectations at the start of the year for lower US Treasury yields in 2024 didn't quite materialize despite the start of a Fed easing cycle September 2024, leading to a somewhat disappointing year for plain vanilla global fixed income benchmarks. the Bloomberg Global Aggregate LEGATRUH index ended the year with a +3.4% total return as the 10 year US Treasury yields rose by 69 bps over the full year. - The move to higher long term rates and a steepening of the curve was driven by a combination of the new presidency, strong economic data in the US and a somewhat more hawkish Fed. Indeed, the labour market remains robust and GDP expanded at a stronger-than-expected annualized rate of 3.1% in Q3. Whilst the Fed cut rates again in December by 25 bps to 4.25-4.5%, the median forecast presented in the dot plot now suggests only two rate cuts in 2025 (in line with market expectations but much less than the 4-5 cuts from the September dot plot), which is justified by the median forecast PCE inflation now projecting 2.5% in 2025 (previously 2.1%).

Despite higher long term rates, 2024 was overall another strong year for asset returns. The S&P 500 posted a total return of +25%, marking the first time since the late-1990s where it's achieved back-to-back annual returns above 20%. This was driven to a large extent by the "Magnificent 7", which were up +67%. Credit spreads in both EM and DM tightened whilst Bitcoin more than doubled mainly post US election. In China, the Politburo signaled a moderately loose monetary position for 2025 – monetary policy had been characterized as "prudent" since 2011. The last time it was characterized as moderately loose was during the post-GFC period. Nominal interest rates are low in China (10 year government bonds have fallen to historical low levels having broken below 2% and are currently around 1.6%), but real interest rates are high, with inflation at just 0.2% y/y in November. In September, the Politburo also promised to deploy more proactive fiscal policy in 2025 and pledged to stabilize the property and stock markets. Yet, no specific measures have been announced. The geopolitical environment in the Middle East was increasingly tense as Israel effectively waged war on Hamas in Gaza and Hezbollah in Lebanon against a backdrop of Syria's al-Assad dynasty being toppled in a couple of weeks. This has in turn weakened Iran.

2024 was a busy year for the election cycle. Little surprise in Indonesia, India, Mexico for example, however things were more complicated in Eastern Europe with suspected foreign interference, such as in Romania, Georgia or Moldova. In another war zone, Ukraine continued losing ground to Russia during this quarter and Trump's clear message of willing to fix the conflict prompted Ukraine's leader Zelenskiy to shift tone and be more open to negotiations. Political experts doubt the possibility of an immediate and durable peace, but even a ceasefire or prospect of some pacification of the region would be good for market sentiment, commodity markets and trade flows/reconstruction. EM hard-currency bonds delivered solid returns at +6.5% for sovereigns (EMBIG Div) and +7.6% for EM corporates (CEMBI BD). These total returns were driven by a negative (sovereigns) or low (corporates) contribution from the duration sub index but strong performance from the credit sub index. High yield spreads significantly outperformed investment grade spread performance. Primary markets opened once again for most issuers which reduced refinancing risks, especially high yielders. This in turn drove a sharp trend in upgrades across most regions, creating this virtuous cycle of spread tightening. Defaulted Lebanese bonds were the best-performing market of 2024 by more than doubling (+118.4%). Despite the ongoing regional tumult (including the fall of the Assad regime in Syria last month), markets are excited about the possibility of Lebanon electing a market-friendly president this month; elections are scheduled for January 9, although they could be delayed. Lebanon has been without a president since October 2022. A new government with a weakened Hezbollah could pave the way for an eventual debt restructuring. Lebanon and the IMF staff agreed on a financial assistance program in 2022, but the prior actions required for its implementation were never met. Argentina ended the year as the second-best performer in the EMBIG, more than doubling (+103.4%) amid the success of President Milei's policies. Moreover, the sovereign obtained a \$1bn REPO deal with global banks during the first week of January, which will help the country repay the debt amortizations scheduled for this month. Ecuadorian bonds closed the year as the third-best in the EMBIG with a total return of +70.8%. Ecuador successfully completed its second debt-for-nature swap, repurchasing \$1.5bn (more than 10%) of its outstanding bonds at a discount with the financing of a newly issued guaranteed green bond for \$1bn. The savings will be used partly to reduce the country's external debt service and partly for nature conservation of the Amazon. - Sri Lanka completed its debt restructuring and ended the year +25.3% higher.

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Vontobel Emerging Markets Debt FAM Fund (the "Sub-Fund") (continued)

This was the fourth sovereign restructuring completed in 2024, and it's worth highlighting that for the first time since 2019, there were zero sovereign defaults during the year.

Venezuelan defaulted bonds were the worst-performing country in the EMBIG, as both regime change and a debt restructuring remain unlikely (-5.7%). Senegal was the second worst in the EMBIG for the year as a whole (-4.7%). The country's fiscal outlook remains negative after the new government disclosed that the deficit of previous years had been much larger than reported, and therefore the stock of debt is also much larger. The government adopted a 2025 budget that foresees a 7.1% fiscal deficit in 2025, down from 11.6% in 2024, yet there's uncertainty about whether the announced measures are sufficient to result in such drastic fiscal consolidation. Senegal is likely to agree on a new IMF program in the coming months, but economic fundamentals are significantly worse than previously thought, which may result in additional credit rating downgrades this year. Brazil was also among the worst-performing hard-currency sovereign bonds in December (-4%).

Hard-currency corporate bonds (CEMBI BD) accumulated a total return of +7.6% for the year. HY bonds outperformed with a total return of +11.7%, which is to be expected during a period of rising US Treasury yields. Meanwhile, IG bonds rose by +4.9%. Africa was the best-performing region (+11.3%, partly due to its higher concentration of HY bonds), followed by EM Europe (+10.8%) as the performance of Ukrainian corporates (+32.6%, the best-performing country in the CEMBI BD 2024) boosted the regional performance. The Middle East region had the weakest performance (+5.3%) in 2024 due to its higher concentration of IG-rated bonds and, therefore, also higher average duration. EM local-currency bonds ended the year down -2.4% in dollar terms. This negative performance was driven by the selloff of EM FX (-7.3%), which is in line with the strengthening of the US dollar against major currencies (+7.1% as per DXY). Meanwhile, carry partly compensated with a +5.6% return. EM rates detracted -0.3% from the performance. EM local-currency yields rose by 20 bps on average during 2024 (much less than US Treasuries), as the majority of EM central banks were in easing mode during the year. Latin America was by far the worst-performing region (-14.7%), driven by selloffs in Brazil (-22%) and Mexico (-15.5%), which was the complete opposite of 2023 when the region delivered a total return of +27.5%. In contrast, EM Asia was quite resilient, delivering a total performance of +4.3% for the year.

The net performance of the fund Ticker: VOEMDIH) in 2024 amounted to +12.33% net of fees on an absolute basis, while the JP Morgan EMBI GD (EUR hedged) delivered +4.68%, equating to a +7.65% positive net relative return. The main driver of these excess returns was credit. This credit contribution was very evenly balanced between country allocation and bond selection. Duration/yield curve detracted from relative performance. The overall credit performance was actually generated from a very well diversified set of issuers, across both investment grade and high yield, which is all the more notable given the somewhat extreme difference in performance coming from these two segments of the market. Moreover, there was no major outlier either on the positive or negative side, attesting to the appropriate sizing of active positions run through the year.

Starting with country allocation, the largest contributors were the overweights to supranationals generically as a market segment (off benchmark) of which the West African Development Bank was the major driver of excess returns. We then have a quartet of our Latam favorites, Ecuador, Colombia, The Bahamas and Argentina each of which contributed over 50bp of alpha in country allocation. On the negative side of country allocation, we have the result of underweights to Dominican Republic, Bahrain and Sri Lanka, none of which exceeded -20bp of relative performance. With regards to the individual bond selection, ISIN code choice was particularly good in Colombia (Pactre, Enfragen, Ecopet), Saudi (PIF), Mexico (Cefelec, Poinsettia and Banco Actinver mainly). There was some minor negative selection in Ghana and Ukraine. On a consolidated basis therefore, largest contributor after taking both country allocation and bond selection into consideration: overweights in Supranationals, Ecuador and Colombia. Largest detractors were underweights in Bahrain, Dominican Republic and Sri Lanka.

Investment Manager's Report (continued)

Flexible Income FAM Fund (the "Sub-Fund")

2024 turned out to be another strong year for equity returns, as economic growth surprised on the upside and central banks finally began to cut rates. The S&P 500 Index posted a total return of +25%, powered higher by further gains for the “Magnificent 7”. This is the first time since the late-1990s where it has achieved back-to-back annual returns above 20%. Other stockmarkets that performed well included Japan, which benefited from a depreciating currency. However, returns for bond investors were more mixed despite falling inflation and interest rate cuts, as those rate cuts took longer than many expected. Developed market government bond yields ended the year higher than when they started, particularly for US Treasuries and UK gilts, which meant losses on long-dated bonds in both countries were meaningful. Whilst the increase in yields was more moderate in the eurozone, returns on long-dated German bunds were still negative. Meanwhile, returns on investment grade, high yield and emerging market bonds outpaced developed market sovereign bonds as investors embraced higher levels of investment risk and credit spreads tightened. In the currency markets, the US dollar had a good year and strengthened against every other G10 currency. The fund recorded a positive return in 2024. The main driver of performance was equities, particularly in the US, although there were meaningful gains from holdings in Japan, Hong Kong/China, Singapore and South Korea. However, positions in Europe and Brazil and Mexico held back returns. In fixed income, our holdings in corporate and emerging market sovereign bonds also posted gains. Corporate bonds benefited from a tightening in spreads, while in emerging markets, our investments in supranational bonds issued by the European Bank for Reconstruction and Development (EBRD) and denominated in Turkish lira and holdings of Brazilian, Colombian, South African and other emerging market government bonds recorded good gains. Conversely, positions in US Treasuries, UK gilts and German bunds lost value as yields rose. Overall, the fund’s cash and currency exposure cost some performance.

Infusive Consumer Alpha Global Leaders FAM Fund (the "Sub-Fund")

The FAM Infusive Consumer Alpha Global Leaders Fund delivered strong performance in 2024 while maintaining significantly lower volatility than equity markets. The FAM Infusive Consumer Alpha Global Leaders Fund delivered a return of 16.6%.

Our strategy focuses on investing in high-quality consumer companies—businesses with durable competitive advantages, strong brand equity, and the ability to adapt to changing economic cycles. Selective companies demonstrate resilience and long-term growth potential, even in uncertain markets. Our concentrated portfolio of approximately 50 businesses covers consumer staples, discretionary and digital sectors. Leading digital players like Alphabet, Amazon, and Meta continued to perform well, leveraging their scale and innovation for resilient growth. For instance, Alphabet showcased its leadership in AI-powered applications, while Amazon's cloud division and retail margins validated our long-term thesis. We also diversified our digital exposure with Alibaba and Tencent, capitalizing on improving Chinese consumption trends. We increased exposure to the consumer discretionary sector, which represented a significant portion of the portfolio by year-end. This was driven by easing inflation, favorable growth comparisons, and the sector's historical strength following interest rate cuts. Within discretionary, we cover sub-industries such as travel, luxury, sportswear, restaurants, and home improvement, supported by strong idiosyncratic drivers. Holdings in Tesla and MercadoLibre positioned us to benefit from technological advancements and emerging market consumption. Consumer staples presented a mixed picture. Companies like Walmart and Costco thrived, leveraging AI, digitization, and loyalty programs, while others faced headwinds from rising interest rates and commodity price volatility. Staples remain a core defensive part of the portfolio, offering stability in uncertain environments. We believe this segment of the market to be underrepresented in global portfolios.

Throughout the year, we increased holdings and diversified exposures to mitigate single-name risk while maintaining thematic focus. Key additions included Tesla, Shopify, and American Express, all leaders with strong competitive moats. We also adjusted positions, exiting names like Ulta Beauty, Lululemon, and Airbnb, where competitive pressures or valuation concerns emerged. A major theme was consolidating retail winners. Investments in Walmart, Costco, and TJX highlighted our preference for businesses leveraging scale and technology to dominate their categories and adapt to evolving consumer preferences. American Express further enhanced our digital payment exposure, reflecting growth in premium consumer spending and innovation. Our disciplined risk management approach, including the Risk Mitigation Program (RMP), continued to protect the portfolio from volatility and sharp drawdowns. While the RMP modestly weighed on performance, it effectively cushioned the impact of market turbulence, particularly during Q3. Looking ahead, we remain optimistic about the global consumer sector. Trends like digitalization, emerging market consumption, and AI-driven innovation offer substantial opportunities for well-positioned companies. While market volatility and policy uncertainty are likely to persist, our focus on quality businesses with resilient demand and structural growth tailwinds positions us to deliver consistent, attractive returns. We remain confident in our strategy of investing in world-class companies that delight the global consumer.

Investment Manager's Report (continued)

Fidelity Sustainable Water and Waste FAM Fund (the "Sub-Fund")

Performance During the year, the fund recorded 2.1% returns, underperforming the index which delivered 17.5%. Stock selection and market selection were weak, notably in the information technology and industrial sectors. This was partly due to not holding the AI and Magnificent Seven names, which are irrelevant to the fund's theme. Stock detractors The lack of exposure to mega-cap technology name Nvidia was the main individual detractor from relative returns. Due to the portfolio managers' focus on thematic purity related to water and waste exposure, the stock is not relevant part of the investable universe. The holding in Entegris, a supplier of materials for the semiconductor industry, declined. The company performed well initially; however, the broad sell-off in semiconductor stocks in the summer sent the company's shares lower, exacerbated by slightly weaker reported earnings. The holding in water and waste management business Veolia declined amid broad weakness in H2 in defensives versus cyclicals. Nonetheless, the company recently announced solid third quarter results driven by robust demand and remains exposed to a number of structural growth areas relevant to the theme. The position in Crown Holdings, a producer of beverage cans, declined. The company issued very disappointing 2024 guidance at the start of the year, with expected weakness in can equipment, its North American aerosol business, and transit packaging. Nonetheless, the company has seen pricing improvement in key markets as a result of industry consolidation. It is also focused on enhancing cost efficiencies and adopting disciplined capital allocation strategies. Enhancers Shares in Ebara, one of the world's largest industrial pumps and turbine manufacturers, added value, given its semiconductor industry exposure and margin expansion. The position in packaging manufacturer Smurfit WestRock rose following the release of its first quarterly results since the merger between Ireland's Smurfit Kappa and US-based WestRock in July, wherein the company reaffirmed its target of achieving synergies, along with opportunities from operational and commercial improvements.

Investment Manager's Report (continued)

JPMorgan China A-Shares Opportunities FAM Fund (the "Sub-Fund")

While the onshore Chinese market delivered double digit returns in 2024 in USD terms, the headline number obscures the extent to which the gains were condensed within a brief period in the third quarter. The year as a whole was characterized by the failure of the economy to reignite; a series of policy interventions which aimed to stabilize the situation but which were often subdued; and the way in which that tussle impacted investor sentiment. 2024 began with a low single digit RMB gain for the onshore market. This was despite geopolitical tensions which included proposed US restrictions on Chinese biotech funding and discussions of tariffs on Chinese imports, dragging down Chinese equities more broadly. Against a backdrop of supportive measures such as a reserve ratio cut and strong onshore ETF inflows, large-cap SOE stocks were a key area of resilience, due in part to perceived government backing.

The second quarter saw a slight decline for onshore equities despite better-than-expected macroeconomic data, policy initiatives targeting the equity market, and the central government's announcement of a plan to acquire unsold properties for social housing and adjust mortgage policies. The pace of policy implementation disappointed investors, leading to a loss of momentum. A significant pivot occurred in September with the announcement of comprehensive stimulus measures by the PBoC and other government bodies. These included interest rate cuts, welfare cash handouts, and targeted support for the capital and real estate markets. The coordinated approach appeared to signal a step change in the commitment to arresting the economic slowdown and boosting investor confidence. The market jumped very sharply from oversold levels, generating essentially the entire year's returns within a fortnight. The fourth quarter once again presented a mixed landscape for Chinese equities due to the ongoing disconnect between the market's and the government's sense of policy urgency. The National People's Congress (NPC) Standing Committee meeting focused on local government debt swaps and potential industry consolidation. Some more positive economic data, including strong retail sales and a recovery in new home sales, suggested that China's growth target of "around 5%" was still within reach.

The balance between the ongoing economic headwinds, the pace of stimulus and the level of valuations continued to recalibrate. The portfolio underperformed the benchmark over the year, due to style headwinds (reflected in sector attribution) and negative stock selection. For much of the year the overall risk-off sentiment for investors in Chinese equities favoured a combination of state owned enterprises (SOEs) and higher yielding stocks, both of which were perceived to have safe haven status. This supported state owned financials whose high dividend payout policies were partly an outcome of the government's need to replenish its coffers in the absence of land sale revenues. Being underweight financials was a key detractor. However the longer term growth prospects for those businesses, and their ability to sustain generous dividend policies, are not at all clear to us; and corporate governance tends to be more challenging than in other areas of the market. Conversely, owning businesses which are sensitive to domestic demand detracted as the economy repeatedly failed to reaccelerate, while parts of the materials sector were knocked by overcapacity in areas of the solar supply chain. The market bounce in September enabled us to regain some ground as growth names in IT and industrials did well, and as capital market sensitives were buoyed by rising equities. For the year as a whole, being underweight real estate added value.

At the stock level, not owning East Money Information, a financial data provider, was among the key detractors over the year. The share price rocketed after the announcement of the stimulus in China late in September. Within healthcare, Chongqing Zhifei Biological was the largest detractor as the stock corrected early in the year. This was due to concerns of slower growth of its existing HPV vaccine products amid weaker consumer sentiment and more domestic competition, as well as increased investments for the ramp up of its new vaccine products. Asymchem was negatively impacted by the news of the Biosecure Act. Even though the stock was not specifically mentioned in the act it fell along with the wider CDMO/CRO space in China, which was negatively impacted following the introduction of the act in the US House of Representatives. Amongst industrials names a solar upstream name, Zhejiang Jingsheng, retreated given a prolonged downcycle amongst its customers. Liquor names such as Kweichow Moutai and Luzhou Laojiao, both baijiu makers, which are often seen as barometers for consumer sentiment, underperformed as part of a broader aversion by investors towards premium brands. On the positive side, the key contributors included capital market sensitives such as China Pacific Insurance, CITIC Securities and Ping An Insurance: while the underweight position in financials was a headwind, stock selection within the sector added value. Technology hardware was a bright spot over the year as AI sensitives such as Foxconn Industrial and Zhongji Innolight both outperformed on earnings upgrades and the launch of Open AI's video generation model Sora. Shenzhen Envicool gained as the company was added to Nvidia's ecosystem partners list. Fuyao Glass did well by delivering an earnings beat on margin expansion in the third quarter. Contemporary Amperex Technology (EV batteries) gained on rotation back into certain carbon transition names, boosted by positive guidance.

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Diversity and Inclusion FAM Fund (the "Sub-Fund")

Global equities performed well in 2024. This was due to a combination of factors, including easing inflation, excitement about artificial intelligence (AI) and strong economic growth. The Magnificent Seven mega-cap tech stocks thrived. In the final quarter of the year, Donald Trump's victory in the elections gave a further boost to US equities. However, the year was punctuated by market dips. In April, sticky US inflation and resilient economic data forced investors to grapple with the possibility that interest rates might remain higher for longer. Worries about tensions in the Middle East also dented equity markets during the month. In July, the "Magnificent Seven" mega-cap tech stocks suffered losses after earnings releases left investors underwhelmed. Further, at the start of August, worries about an economic slowdown in the US and unwinding of the yen carry trade had negative ramifications for markets. Towards the end of the year, worries about the impact of potential US trade tariffs hurt some markets. Against this backdrop, the fund recorded positive returns, but underperformed its benchmark, the MSCI ACWI Net Return Index. Stockpicking in technology, consumer discretionary, financials and healthcare had a particularly negative impact on relative returns. The fund's underweight to communication services also had an adverse effect on relative performance. In contrast, stock selection in consumer staples boosted relative returns, as did the fund's lack of exposure to materials. Key detractors from relative performance included Progyny, Pets at Home and Lululemon. In September, Progyny's share price fell steeply after it revealed that it had lost an important client. Pets at Home reduced its annual profit guidance in January due to weaker-than-expected Q3 sales; this led to a drop in its share price. In March, the Competition and Markets Authority (CMA) announced its intention to investigate the veterinary industry, compounding Pets at Home's share price instability. Later in the year, in November, Pets at Home lowered its full-year profit guidance, citing a muted market. This led to another decline in its share price. In March, Lululemon's share price was dented by weaker-than-expected full-year guidance.

The top contributors to relative performance were AIB Group, Booking Holdings and Brambles. In October, Booking Holdings released estimate-beating third-quarter results, boosting its share price. In August, Brambles' share price rose after its fiscal-year 2024 numbers impressed investors. During the course of the year, the fund opened positions in technology conglomerate Siemens, German semiconductor manufacturer Infineon and biopharma company GlaxoSmithKline. We also opened a position in Novo Nordisk. The Danish pharma company has a gender-balanced board and workforce. We closed our positions in Etsy, Lululemon and GRAIL. GRAIL briefly became part of the fund after its spin-off from Illumina in June. In 2025, inflation and a slower pace of rate cuts appear to once again be drivers of uncertainty. This is primarily due to US president-elect Donald Trump's potential tariffs and tax-cutting plans. Investors are concerned about the impact these might have on rising inflation, potentially delaying or slowing down the pace of rate cuts. This uncertainty, as well as elevated debt burdens in key economies such as the US and the UK, is increasingly being reflected in rising bond yields, intensifying pressure on rates/the cost of borrowing. Consumer demand may well be tested this year, as many companies with high sensitivity to rates. We continue to see the benefits of investing in companies which are high-quality, well-moated, benefit from robust business models, have strong pricing power and enjoy market dominance. These attributes will help them better withstand upcoming pressures.

M&G Investment Management Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Global Listed Infrastructure FAM Fund (the "Sub-Fund")

The fund underperformed the benchmark largely due to stock selection. US growth remained resilient and the large-cap tech stocks once again dominated market performance rising collectively c.70%. Despite the Federal Reserve commencing rate cuts and cutting by 100bp, bond yields actually rose through the course of the year. With the exception of a brief period in Q3, rate-sensitive sectors like utilities and real estate were under pressure. The US election result and decisive Republican victory resumed pressure on renewables and sustainability related businesses. Fears of higher fiscal spending and inflation fed through to rates. Belief in lighter financial and tech regulation also supported those sectors where the fund is inherently underweight. Against these significant challenges our companies continue to deliver strong results and have been able, in most cases, to deliver above inflation dividend increases. The most positive contribution came from energy where our significant overweight vs the benchmark was offset by strong stock selection. Negative contribution came mainly from utilities and real estate. Our 'Energy infrastructure' category performed well this year, particularly in Q4, driven by the election result and incoming President's intention to raise oil production. TC Energy, ONEOK, Gibson Energy, Keyera and Enbridge all were key positive contributors with absolute returns in excess of 25%. AES and NextEra Energy Partners were two of the largest detractors as the market turned against renewable energy exposure and companies with higher leverage. Three new stocks were added to the portfolio this year: Exelon Corp, South Bow and Tokyo Metro while two were divested – Xinyi Energy and Orsted which were both divested due to the suspension of the dividend.

Investment Manager's Report (continued)

European STARS Equity FAM Fund (the "Sub-Fund")

2024 was a strong year for asset returns, as economic growth surprised on the upside and central banks globally started to cut rates. Going into 2024, there was much discussion about whether the global economy would see a soft or hard landing, but in the end, we experienced no landing despite encountering some bumps along the way. Positive returns were observed across equity, fixed income, and several commodities. In this favorable asset price environment, the European equity market performed well, delivering a total return of 8.6% in 2024. However, despite being in decent positive territory, the European market lagged behind the world excluding Europe, which gained 30.4% (measured in EUR). The divergence between European and global asset returns became particularly pronounced in the second half of 2024, driven by slower economic growth in Europe compared to the US. This disparity was especially evident in the production side of the economy, while the service sector performed better. A prime example of this trend is the current challenges faced by the European automotive industry, related to the transition towards mass market adoption of electric vehicles (EVs) and rising competition from Chinese producers. While EV adoption is necessary from an ESG decarbonization perspective, it entails industrial and macroeconomic transition risks, particularly for Germany and France. This divergence in near-term macroeconomic prospects has also led to a weakening exchange rate for the EUR. Furthermore, the European market performance was negatively impacted by political uncertainty in several European countries and foreign trade frictions with the US. These concerns, among others, held the European equity markets back in relative terms compared to global markets. Stock selection contributed negatively to the fund's performance whereas sector allocation contributed positively. Stock picks in Communication Services (+103 bps) and Consumer Discretionary (+67 bps) contributed positively, whereas stock picks in Health Care (-154 bps) and Industrials (-147 bps) detracted from performance. In terms of sector allocation, the strategy benefitted from being underweight in Energy (+75 bps) and Consumer Discretionary (+25 bps), while the underweight in Utilities (-34 bps) and the overweight in Health Care (-32 bps) detracted from performance.

Investment Manager's Report (continued)

Global Sustain Paris Aligned FAM Fund (the "Sub-Fund")

In 2024, stockpicking in the technology sector proved particularly detrimental to relative performance. The fund's underweight to technology also had a negative impact on relative returns. In contrast, stock selection in financials boosted relative performance, as did the fund's overweight to financials. Key detractors from relative performance included Novo Nordisk and Adobe. In July, positive early-stage trial data on Roche's weight-loss pill led to a drop in Novo Nordisk's share price. In September, the pharma company's share price fell again after it revealed that it was likely to have to enter into pricing discussions on Ozempic with the US Centers for Medicare & Medicaid Services. In November, disappointing 2025 guidance and concerns that Trump's selection of Robert F Kennedy Jr (RFK) as US Health Secretary could have negative ramifications for the pharma industry led to another drop in its share price. Disappointing data on its weight-loss medication CagriSema in December also had an adverse effect on Novo Nordisk's share price. In March, Adobe issued weaker-than-expected guidance for the second quarter, leading to a decline in its share price. In May, software company Salesforce reported lower-than-anticipated first-quarter revenue and issued weak guidance. This had negative ramifications for other software stocks, including Adobe. The top contributors to relative performance were American Express and Discover Financial Services. In February, Discover Financial Services' share price rose following news that US consumer bank Capital One intended to acquire the business for \$35.3 billion. Its share price rose again in November: investors believe that Discover Financial Services' merger with Capital One is more likely to obtain regulatory approval under a Trump administration. At the end of February, we added Siemens to the fund and decided to close our position in Danish pharma company ALK-Abelló. In November, we chose to close our position in transport and logistics company Kuehne + Nagel.

March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

North American STARS Equity FAM Fund (the "Sub-Fund")

The broad US equity market closed 2024 up 23% on a total return basis, and +55% over the last 2 years. Whereas, the equal-weighted index lagged, rising 12% in 2024 and +28% the last two years, with two years of the weakest breadth in history (just 30% and 27% of stocks outperformed the blue-chip US index in 2024/2023). All major asset classes gained in 2024, except LT Treasuries (-6%), while gold was the best performer (+26%). Materials was the only sector that was down in 2024 (-2% price return) and Health Care obtained just a small gain of +1%. Communication Services (+39%) and Information Technology (+36%) were the biggest gainers, followed by Consumer Discretionary (+29%) and Financials (+28%). It is important to highlight the performance of the so-called "Magnificent-7" stocks – as even though many investors are skeptical of their tremendous rise – their positive run has been driven to a large extent by real profits. However, the P/E multiple today is elevated (35x) and thus when earnings growth starts to slow, they could be vulnerable as a group. In this context, the strategy struggled to navigate the challenging market conditions and underperformed this year. Both stock selection and sector allocation contributed negatively to performance. Stock picks in Materials (+36 bps) and Consumer Discretionary (+35 bps) contributed positively, whereas stock picks in Information Technology (-205 bps) and Consumer Staples (-135 bps) detracted from performance. In terms of sector allocation, the strategy benefitted from being underweight in Energy (+69 bps) and Real Estate (+35 bps) while the underweight in Communication Services (-50 bps) and the overweight in Health Care (-35 bps) detracted from performance.

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Global STARS Equity FAM Fund (the "Sub-Fund")

In 2024, the global equity index rose 18% in USD, while the equal-weighted index rose slightly less than 6%. Looking under the hood, we believe the main reason for the narrowness in markets is that the global economy as a whole is slowing, which causes problems for many, or most, companies, while certain global trends are extremely strong. Most prominent among these trends is AI infrastructure and adjacencies. But volatility even in these pockets of growth is material. Volatility was also exacerbated by the increase of passive flows, causing problems for us and other active managers in 2024. Broadly speaking, we believe our defensive tilt has hampered the portfolio performance in 2024 on an underlying basis and at the margin, as the market remains priced for a cyclical recovery in 2025 despite the high levels of uncertainty, pricing in very little probability of an adverse economic outcome in a backdrop of rising bond yields, untamed inflation, an ISM still below 50, and the high degree of uncertainty that the disruptive policies of Trump have caused. In this context, the strategy struggled to navigate the challenging market conditions and underperformed this year. Stock selection contributed negatively to the fund's performance, whereas sector allocation contributed positively. Stock picks in Materials (+42 bps) and Real Estate (+25 bps) contributed positively, whereas stock picks in Information Technology (-221 bps) and Industrials (-90 bps) detracted from performance. In terms of sector allocation, the strategy benefitted from being underweight in Energy (+69 bps) and Materials (+29 bps), while the overweight in Health Care (-46 bps) and Consumer Staples (-43 bps) detracted from performance.

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Global Disruptive Opportunities FAM Fund (the "Sub-Fund")

In December, the fund slightly underperformed its reference index during the final days, marked by an acceleration in profit-taking as markets cooled off. Investors were digesting the implications of a firmer Federal Reserve meeting and continued repricing in the rates market. Nevertheless, the fund closed the year with a strong absolute performance, achieving its third-best year since inception in 2024. Throughout the month, we noted profit-taking across all dimensions, with only tech-oriented sectors and large-cap stocks showing outperformance, while other sectors experienced negative performance. This trend was particularly exacerbated in our mid-cap exposure, especially within the cloud theme, with sharp underperformance. A bright spot for the month was the robust performance of companies in the logic and networking segments of the big data theme, notably Broadcom and Marvell Technology. Broadcom reported an outstanding earnings report, finally breaking the \$1 trillion market cap threshold, and achieving a remarkable 110% performance in 2024. The company provided a very positive outlook, highlighting a potential \$60-90 billion AI revenue opportunity from current customers by 2027. Overall, the acceleration of AI revenue opportunities is being driven by a strong ramp-up in ASIC production of new 3nm products. In the life sciences dimension, the biotech theme faced challenges due to Vertex's disappointing Phase 2 results for suzetrigine, a non-opioid drug for lower back pain, which caused the stock to drop by 11%. During the year, we continued to take profits on large-cap tech stocks, particularly Broadcom. With the proceeds, we increased diversification among industrial and financial sectors.

CPR Asset Management

March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Medtech FAM Fund (the "Sub-Fund")

After several years of challenges, the MedTech sector is showing robust momentum in revenue growth. This resurgence is rooted in a unique historical dynamic characterized by three key pillars: innovation, technology, and structural growth. MedTech companies are making substantial investments in research and development, creating solutions that meet unmet medical needs. The integration of healthcare with emerging technologies, especially artificial intelligence and connected devices, has led to the creation of groundbreaking medical devices. Additionally, the increasing demand for MedTech solutions is driven by an aging population and the rise of chronic diseases. A significant driver of growth for MedTech companies is innovation, particularly through artificial intelligence. Notable advancements have been made in several critical areas. For instance, AI enhances diagnostic accuracy with algorithms that can identify anomalies not visible to the human eye, while also speeding up the diagnostic process and reducing patient wait times. Furthermore, devices like cardiac monitors and smart insulin pumps enable real-time patient monitoring, improving the management of chronic diseases and adherence to treatment. AI-enhanced surgical robotics facilitate less invasive procedures, increasing precision and decreasing recovery times for patients. These innovations not only bolster the competitiveness of the MedTech sector but also attract increasing investment while addressing essential clinical needs. In a landscape where the Trump administration appears ready to heighten regulatory and political scrutiny on pharmaceutical companies, the MedTech sector emerges as a reliable safe haven. Unlike pharmaceutical firms, which often face criticism for rising drug prices, MedTech companies typically avoid the political spotlight. Their business model emphasizes technological solutions that enhance clinical outcomes and optimize healthcare costs. Moreover, MedTech enjoys a more favorable public perception, as medical devices are viewed as instruments of innovation and progress that directly assist healthcare professionals in their daily work. Consequently, in an environment where pharmaceuticals may encounter intensified scrutiny, MedTech presents an appealing and less risky investment opportunity within the healthcare sector.

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Sustainable Future Connectivity FAM Fund (the "Sub-Fund")

Market Environment Global Equity markets produced strong returns in 2024 powered by a particularly strong performance from the US equity market. Equity returns were supported by a stronger than expected US economy, moderating inflation allowing interest rate cuts, and on-going enthusiasm surrounding Artificial Intelligence (AI). 2024 was the year of "US exceptionalism" as the US economy decoupled from other major regions and its stock market benefited from very high exposure to mega-cap technology companies which are seen as beneficiaries of the AI theme and drove the market's earnings growth. The decisive US election victory of the Republican party and President-Elect Donald Trump provided further support on expectations that their policies would lift growth, lower taxes and cut regulation. Elsewhere, markets generally delivered positive returns, but at a lower level, due to greater economic, political and geopolitical headwinds. Indeed, the return of all other major regions was less than half that of the US. The concentration of market returns was not just towards US equities, but within the US market it was concentrated within a small number of companies – the so called "magnificent seven". These mega-cap US technology stocks are seen as keyways to gain exposure to the AI theme and were responsible for over half the US market's gain in 2024. These seven US stocks now account for over 20% of the MSCI ACWI benchmark (an index of over 2,600 companies). These names also dominated sector returns with Information Technology and Communication Services the stand-out performers. Conversely, the Materials sector ended in negative territory on fears over weakness in the Chinese economy and the Healthcare sector was also particularly lacklustre.

During the period, the fund recorded positive returns, though underperformed its benchmark. Stock picking in semiconductors was the main source of this weakness, partially compensated for by the positive allocation effect from the overweight in the same sector.

The holding in semiconductors companies Qorvo, ASML and NXP Semiconductors declined following weaker than expected guidance and quarterly results. The position in smartphone semiconductor company Qorvo fell. While quarterly results were in line estimates, shares declined after the company announced December guidance below analyst expectations, the company's management revealed it expects a downshift in the market with customers switching to lower-end handsets, where the company does not compete. On a positive note, the company is optimistic about the high-end Android market and is expected to see growth following Samsung's anticipated release in spring 2025. Shares in ASML fell after reporting a miss on orders while decreasing guidance for 2025. Poor guidance was attributed to weakness in orders from China, Intel, Samsung and TSMC. The underweight position to graphics processing unit (GPU) manufacturer Nvidia detracted from returns, as its shares rallied on the back of very strong demand for its chips, driven by Gen AI-related capex.

The overweight position in Taiwan Semiconductor Manufacturing Company (TSMC) increased after the company reported stronger-than-expected third-quarter results, driven primarily by improved margins. The company enhanced efficiency through better Fab utilisation and higher average selling prices (ASPs). Management also indicated a strong and positive outlook for AI demand. The position in SAP yielded positive returns following the release of robust third-quarter results and an upgraded full-year guidance. The strong performance was primarily driven by the company's cloud segment and its Cloud ERP suite, which continue to demonstrate strong momentum and accelerated growth. The fund's holding in networking and telecommunications company Ericsson and Motorola Solutions rallied following strong third quarter earnings. Motorola Solutions announced a 9% increase in revenue and a 17% rise in earnings per share. Growth was driven by strong performance in the Products and Systems Integration segment as well as an increase in the Software and Services segment. Similarly, Ericsson rose after the company revealed better than expected third quarter results, primarily benefitting from the networking segment.

The strategy adopts a fundamental, bottom-up approach to investing in the long duration, transformative trend of future connectivity. This is defined as companies involved in enabling connectivity, and those that innovate and disrupt other industries using improved connectivity. It aims to invest in underappreciated growth opportunities in the theme, and combines a rigorous, bottom-up stock selection process with thematic and industry analysis to produce a relatively concentrated, high growth portfolio of 35–45 stocks. The fund aims for better than benchmark exposure to companies with strong ESG ratings. The manager initiated a new position in Meta Platforms, a leading technology conglomerate. The company is poised to capture significant upside through enhanced content and user engagement, which should drive increased monetisation.

Additionally, Meta Platforms has a suite of under-monetised assets, including Reels, Threads, Messenger, and WhatsApp, that offer substantial potential for future revenue growth. The manager increased the exposure to mega-cap consumer computing company Apple. It is a quality compounder and has a well-integrated ecosystem with high customer loyalty. The stock has been weak on concerns about regulatory overhang and softer iPhone sales. However, Apple's new AI

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Changing Lifestyles FAM Fund (the "Sub-Fund")

Global stock markets achieved robust gains in the 12 months to 31 December 2024, amid ongoing investor enthusiasm about artificial intelligence despite periods of volatility during the year. The first quarter saw global stock markets advance. US shares registered a robust gain, supported by some well-received corporate earnings including from some of the so-called "Magnificent Seven" technology companies. Eurozone and UK share prices also gained in the first quarter amid ongoing optimism over demand for AI-related technologies. The Japanese equity market experienced an exceptionally strong rally, with the TOPIX Total Return index recording a total return of 18.1% in Japanese yen terms. Asia ex Japan equities achieved modest gains, while emerging market equities also gained but underperformed compared to developed market peers. Strength in some Asian markets helped emerging market equities outperform developed markets in the second quarter. Stocks related to the AI theme continued to perform strongly, with stocks in Taiwan performing particularly well in the quarter. The European Central Bank cut interest rates, but sticky inflation kept other major central banks on hold. Shares in China also achieved strong gains in the quarter, as low valuations for many Chinese stocks encouraged Asia-focused investors to cautiously return to the Chinese market following concerns about India's high valuations and Japan's continued currency weakness. The strong performance by global shares continued in the third quarter despite pronounced volatility on several occasions. Emerging markets performed strongly, supported by the announcement of new stimulus measures in China.

The final quarter of the year saw a mixed performance for global equities. US shares advanced following Donald Trump's victory in the US presidential election on hopes that his policy programme would lift growth, lower taxes and cut regulation. However, other regional markets came under pressure amid worries over trade tariffs. China and Hong Kong experienced sharp declines as the prospect of a second Trump presidency raised the risk of heightened tensions over trade and technology. Eurozone shares declined in the fourth quarter amid fears of recession, political instability in France and Germany, and worries over trade wars. UK shares also fell in the quarter. During the period, the portfolio underperformed its MSCI AC World Index comparator. Among positive relative contributors to performance, Spotify (a component of the Accessibility sub-theme), Netflix (Accessibility) and Walmart (Accessibility) all outperformed during the period. Investors remained excited about what they saw as a strong growth trajectory for Spotify and this was underscored by well-received results. Netflix performed well, buoyed by excellent earnings releases and estimate upgrades driven by expectations of a further acceleration in growth, not least through its ad-supported membership subscription performance. Walmart, for its part, outperformed as investors rewarded it for its strong sales and profit growth and its related successes in developing its ecommerce capability and extending its reach to higher-income demographics. On the debit side of the ledger, Raia Drogasil (Accessibility), Lululemon (Wellbeing) and Estee Lauder (Identity) all underperformed. Raia Drogasil has been negatively impacted by the macro-economic challenges facing Brazil with investors concerned about the country's fiscal position and the outlook for inflation and interest rates. Lululemon suffered from downward pressure on earnings estimates from high end competition and weakness among younger consumers, and indeed this prompted us to sell the portfolio's position in the stock. Estee Lauder, for its part, was sold off by investors because of difficult trading conditions, particular in its key Chinese markets, which prompted a company profit warning and dividend cut. Turning to transactions during the period, we established a number of new holdings. These included Chipotle (Experiences), Dick's Sporting Goods (Experiences) and Associated British Foods (Accessibility). We have a strongly positive view of Chipotle's fundamental prospects, and we felt that the pullback following the CEO's departure left the stock looking very attractively valued. Our decision to introduce Dick's Sporting Goods was based on our view that the company is likely to benefit from improving sales densities and margins while its House of Sport looks well placed to drive better space growth outlook and differentiation than its competitors. We bought Associated British Foods, for its part, because we believe that its Primark business is likely to benefit from a benign competitive landscape in apparel retail, as well as from an acceleration in US space growth and further margin recovery. In addition, cash returns to shareholders, alongside an already low valuation, further underpin the investment case in our view. Sales during the period included the complete disposals of Lululemon (Wellbeing), Lowe's (Identity) and AIA Group (Wellbeing). We exited Lululemon given what we consider to be the risk of further downward pressure on short-term estimates from high end competition and demand weakness from younger consumers. We disposed of Lowe's because we are now less hopeful about a potential uplift in activity because borrowing costs look likely to stay elevated while we sold out of AIA on concerns that a recent investigation of cross border insurance sales in Hong Kong might foreshadow further similar regulatory interventions.

In terms of outlook, the key factors behind equity market strength in 2024 have been earnings delivery (particularly in the US) combined with investor optimism that this can extend into 2025. We think that global equities, despite elevated valuations, can continue to make progress given a relatively favourable economic backdrop. Indeed, given the current strength of the US economy, a recession looks unlikely and business confidence in some of the more rate sensitive parts of the global economy will likely strengthen. Notwithstanding this view, periods of volatility are probable should data releases and other news flow conflict with markets' expectations of a 'soft landing' or 'no landing' scenario. President Trump's policy proposals and actions in areas including, but not limited to, trade and immigration might also cause

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Changing Lifestyles FAM Fund (the "Sub-Fund") (continued)

volatility as investors recalibrate their views on the growth and inflation outlook both regionally and globally. Against this backdrop, and despite likely bouts of market volatility, we continue to see an attractive opportunity set for our Changing Lifestyles investment theme. While consumers in many territories have been under pressure, there has been something of a normalisation in inflation and interest rates. This has positive implications for consumer confidence, and we are increasingly looking for opportunities in the Identity sub-theme where there are interesting pockets of value in luxury for example. The Wellbeing sub-theme is also throwing up attractive ideas, such as in consumer-facing retail markets, while the geographical cross currents are also intriguing. In China, for example, further stimulus activity could be supportive while in the UK and Europe, low valuations may provide interesting entry points for businesses with global operations possessing strong market positions and attractive long-term prospects. These current opportunities alongside the long-term strength of this investment theme mean we remain excited about the Changing Lifestyles strategy.

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Morgan Stanley US Advantage FAM Fund (the "Sub-Fund")

U.S. equities advanced over the 12 months ended 12/31/24, as measured by the S&P 500 Index. All index sectors but one (Materials) had positive performance, led by Communication Services, Information Technology, and Financials. Materials, Health Care, and Real Estate were the biggest underperformers.

The portfolio returned 31.34% (gross of fees), while the S&P 500 benchmark returned 25.02%. The portfolio outperformed the benchmark this period due to favourable sector allocations and stock selection. Stock selection and an average overweight to Consumer Discretionary was the greatest positive contributor to relative performance. Stock selection and an average underweight in Information Technology, an average underweight in Health Care, and stock selection and an average overweight in Communication Services also added to relative gains. Energy, Materials, and Consumer Staples sectors which the portfolio had no exposure to – and average underweight in Real Estate contributed positively. Conversely, stock selection and an average underweight in Financials, stock selection in Health Care, and stock selection in Industrials detracted from relative performance. A lack of exposure to Utilities had a neutral impact on relative performance. Relative to the index, the top contributing holdings in the portfolio included MicroStrategy, DoorDash, and The Trade Desk. Conversely, Snowflake, Meta Platforms, and Chewy were the top relative detractors.

Counterpoint Global believes having a market outlook can be an anchor. Our focus is on assessing company prospects over a five year horizon, and owning a portfolio of unique companies with strong, sustainable competitive advantages whose market value we believe can increase significantly for underlying fundamental reasons.

MSIM Fund Management (Ireland) Limited
March 2025

FAM Series UCITS ICAV

Investment Manager's Report (continued)

Banor Club Fineco AM Fund (the "Sub-Fund")

In the month of December, global stock markets had divergent trends: the USA gave back some of the increases since the beginning of the year to 23%, above all due to weakness of the tech giants in the last days of 2024; on the other hand, Asian stock markets benefited from a return of interest thanks to attractive valuations with increases of between 3 and 4% during the month. The year ends in a very positive way, with a +17% for the MSCI World developed markets index and 5% for the MSCI Emerging markets index: one of the strongest divergences between the two indices in history. The cause of the US weakness was linked to a rise in real rates, which rose by around 50 basis points in December, which led the US Treasury bond index to lose 1.5% and close the year near zero. The cause of this increase is to be found in the still good macroeconomic data and in the issuance calendar which foresees over 120 billion in long-term treasury bonds and 250 billion in short-term ones in the first ten days of 2025. The USA also dragged European rates upwards, which nevertheless managed to close the year with increases between 2 and 5% thanks to expectations of a more marked macroeconomic slowdown in Europe with a consequent more accommodating monetary policy. This possible divergence in monetary policies between central banks continued to help the dollar, which closed with a rise of 6%, including 2 points in the month of December. The strength of the greenback did not impact raw materials, which recovered slightly in the final month of the year and closed the year with a 12% increase with strong divergences within them: gold rising sharply, oil slightly negative, agricultural materials in sharp decline.

Even in the last quarter of the year we witnessed very concentrated performances in a few stocks: the fourth quarter of the year saw an increase in the US index limited to around 2%, with the Magnificent 7 contributing 3 points of increase and the rest of the index made up of 493 stocks which had a negative return of around 1%. Throughout 2024 we can see how Nvidia contributed over 20% of the index's rise and the Magnificent 7 led to two-thirds of the rise.

The total return of the American index in 2024 was caused approximately half by an expansion of the multiple (area circled in grey) and approximately half by profit growth. Extending the analysis to the last 15 years, we can see how the total return of the US index of 13.9% has benefited for approximately 3 points per year from an expansion of the multiple, for 9% from the growth of profits and for 2% from dividends; the USA was the only area in the world to benefit from this multiple expansion, something historically not sustainable.

For 2025 we will monitor three issues: firstly China, where the market is not optimistic about the possibility of releasing an effective stimulus package for the economy. The interest rate on Chinese ten-year bonds in fact continues to hit historic lows, with inflation expected below 1% and GDP growth falling from 4.8% to 4.5% in 2025, the lowest figure in history if we exclude the period of Covid.

The second theme concerns Germany, once the locomotive of the European economy, which has been showing signs of weakness since the Chinese economy began to slow down. Elections will be held in February and with the polls showing the CDU in a clear advantage, the possibility of increasing public debt to stimulate investments is being discussed. In fact, Germany is one of the few countries that has not increased public debt in the last 15 years and could benefit from a fiscal stimulus plan pushed by the new government.

The third theme is the sustainability of the outperformance of the US market, which has reached danger levels based on various historical indicators. In particular, we point out that the Shiller P/E (the P/E calculated on the average of the profits of the previous 10 years, in order to smooth out economic cycles) has reached the third highest value in history and that Warren Buffett's favorite indicator (capitalization/GDP) is at historic highs.

In conclusion, in light of markets that are very complacent on the macroeconomic trend, on the decline in inflation and on the stability of the macroeconomic cycle, we believe that a prudent positioning is still to be preferred; there continue to be many interesting stocks to buy with a long-term horizon, especially in Europe and among small/mid caps. The bond component still offers interesting returns, both nominal and real, and with the Central Banks close to peak rates, they make the medium-term government bond part an interesting investment; regarding longer bonds we have some more doubts linked to the unfavorable demographics and the increase in public debts.

**DEPOSITARY'S REPORT TO THE SHAREHOLDERS OF FAM SERIES UCITS ICAV**

We, BNP Paribas S.A., Dublin Branch, appointed Depositary to the ICAV provide this report solely in favour of the investors of the Fund as a body for the year ended 31 December 2024 ("the Accounting Period"). This report is provided in accordance with the UCITS Regulations – European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011 (SI No 352 of 2011) as amended, ("the UCITS Regulations"). We do not, in the provision of this report, accept nor assume responsibility for any other purpose or person to whom this report is shown.

In accordance with our Depositary obligation as provided for under the UCITS Regulations, we have enquired into the conduct of the ICAV for the Accounting Period and we hereby report thereon to the investors of the Fund as follows;

We are of the opinion that the Fund has been managed during the Accounting Period, in all material respects:

- (i) in accordance with the limitations imposed on the investment and borrowing powers of the Sub-Fund by the constitutional documents, the Regulations and by the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 ("the Central Bank UCITS Regulations"); and
- (ii) otherwise in accordance with the provisions of the constitutional documents, the Regulations and the Central Bank UCITS Regulations.

FAM Series UCITS ICAV

Directors' Report

For the financial year ended 31 December 2024

The Directors of FAM Series UCITS ICAV (the “ICAV”) submit their report together with the audited financial statements for the financial year ended 31 December 2024.

Principal Activities

The ICAV has been authorised by the Central Bank of Ireland (the “Central Bank”) as an Irish Collective Asset-Management Vehicle pursuant to the Irish Collective Asset-Management Vehicles Act 2015 (the “ICAV Act”). The ICAV has been authorised pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 (as amended) and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (as amended).

The ICAV is structured as an umbrella entity composed of different Sub-Funds. Each Sub-Fund will represent a separate portfolio of assets of the ICAV and may have more than one Class or Series of Shares allocated to it.

Statement of Directors' Responsibilities in Respect of the Financial Statements

The Directors are responsible for preparing the financial statements in accordance with applicable Irish law and International Financial Reporting Standards (“IFRS”) as adopted by the European Union (“EU”).

Irish company law requires the Directors to prepare financial statements for each financial year, which give a true and fair view of the state of affairs of the ICAV and of the profit or loss of the ICAV for that year. In preparing those financial statements, the Directors are required to:

- select suitable accounting policies and then apply them consistently;
- make judgments and estimates that are reasonable and prudent;
- prepare the financial statements on the going concern basis unless it is inappropriate to presume that the ICAV will not continue in business; and
- state whether the financial statements have been prepared in accordance with applicable accounting standards, identify those standards, and note the effect and reasons for any material departure from those standards.

The Directors confirm that they have complied with the above requirements in preparing the financial statements for the year ended 31 December 2024 (the “Financial Statements”). In carrying out these requirements, the Directors have appointed BNP Paribas Fund Administration Services (Ireland) Limited (the “Administrator”) to act as Administrator to the ICAV.

Review of the Business and Future Developments

A comprehensive overview of the ICAV's and its Sub-Funds' activities and its future developments are set out in the Investment Manager's reports. Investment objectives may change from time to time, these will be reflected in the prospectus of the ICAV and the relevant Sub-Fund supplement.

Risks and Uncertainties

The principal risks and uncertainties which the ICAV faces relate to the use of financial instruments and are listed in Note 14 “Financial Instruments and Associated Risks”.

Results and Dividends

The results for the financial year are shown in the Statement of Comprehensive Income on pages 103 to 118.

Corporate Governance

The Directors have voluntarily adopted the 'Corporate Governance Code for Collective Investment Schemes and Management Companies', as published by Irish Funds in December 2011 (the “IF Code”), as the ICAV's corporate governance code. In respect of the financial year ended 31 December 2024, the Directors confirm compliance with the provisions of the IF Code.

Secretary

The Secretary that served during the financial year is listed on page 3.

FAM Series UCITS ICAV

Directors' Report (continued) **For the financial year ended 31 December 2024**

Directors

The Directors of the ICAV at 31 December 2024 were:

Jim Finn (Irish resident)*
Fabio Melisso (Irish resident)**
Ciaran Brady (Irish resident)**
Lorenzo Di Pietrantonio (Irish resident)**

* Independent non- executive Director

** Non- executive Director

Transactions Involving Directors

Other than as disclosed in Note 13 to the Financial Statements, there are no contracts or arrangements of any significance in relation to the business of the ICAV in which the Directors or Secretary had any interest as defined in the ICAV Act at any time during the financial year.

Connected Persons

In accordance with the requirements of the UCITS Regulations, all transactions carried out with the ICAV by the promoter, manager, trustee, investment adviser and associates/group companies ("connected persons") must be conducted at arm's length and be in the best interests of shareholders. The Directors are satisfied that there are arrangements (evidenced by written procedures) in place to ensure that the obligations set out in the UCITS Regulations are applied to all transactions with connected persons and that transactions with connected persons entered into during the year complied with the obligations set out in the UCITS Regulations.

Accounting Records

The measures taken by the Directors to secure compliance with the ICAV's obligation to keep adequate accounting records are the use of appropriate accounting systems and procedures and employment of competent persons through the appointment of the Administrator. The accounting records are kept at the registered address of the Administrator at Termini, 3 Arkle Road, Sandyford, Dublin 18, D18 C9C5, Ireland.

Statement of Relevant Audit Information

The Directors acknowledge that they are responsible for providing all relevant audit information to the ICAV's statutory auditors in connection with preparing their report in accordance with section 330 of the Companies Act 2014 (as amended). The Directors confirm that:

- so far as the Directors are aware, there is no relevant audit information of which the ICAV's statutory auditors are not aware; and
- each of the Directors has taken all the steps that ought to have been taken as a Director in order to make himself or herself aware of any relevant audit information and to establish that the ICAV's statutory auditors are aware of that information.

Going Concern

The ICAV's management has made an assessment of the ICAV's ability to continue as a going concern and is satisfied that the ICAV has the resources to continue in business for the foreseeable future. Furthermore, management is not aware of any material uncertainties that may cast significant doubt upon the ICAV's ability to continue as a going concern.

Independent Auditors

Deloitte Ireland LLP, Chartered Accountants and Statutory Audit Firm were appointed auditors for the financial year.

FAM Series UCITS ICAV

Directors' Report (continued)
For the financial year ended 31 December 2024

Events During the Financial Year
Geopolitical Conflicts

The recent outbreak of geopolitical conflicts all over the world can have an impact on the global economies. The Directors are carefully monitoring the situation as well as its potential impacts on the ICAV. The ICAV is fully capable of continuing its usual operations.

All disclosures relating to events during the year ended 31 December 2024 are disclosed in Note 20 of the Financial Statements.

Events Post Financial Year End

All disclosures relating to events after the year ended 31 December 2024 are disclosed in Note 21 of the Financial Statements.

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF FAM SERIES UCITS ICAV

Report on the audit of the financial statements

Opinion on the financial statements of FAM Series UCITS ICAV (the 'ICAV')

In our opinion the financial statements:

- give a true and fair view of the assets, liabilities and financial position of the ICAV as at 31 December 2024 and of the result for the financial year then ended; and
- have been properly prepared in accordance with the relevant financial reporting framework and the applicable regulations.

The financial statements we have audited comprise:

- the Statement of Financial Position;
- the Statement of Comprehensive Income;
- the Statement of Changes in Net Assets Attributable to Holders of Redeemable Participating Shares;
- the Statement of Cash Flows;
- the related notes 1 to 24, including material accounting policy information as set out in note 2; and
- the Condensed Schedule of Investments.

The relevant financial reporting framework that has been applied in their preparation is the Irish Collective Asset-Management Acts 2015-2020 ("the ICAV Act") and IFRS Accounting Standards as issued by the International Accounting Standards Board (IASB) and as adopted by the European Union ("the relevant financial reporting framework").

The applicable regulations that have been applied in their preparation is the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations, 2019 ("the applicable regulations").

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (Ireland) (ISAs (Ireland)) and applicable law. Our responsibilities under those standards are described below in the "*Auditor's responsibilities for the audit of the financial statements*" section of our report.

We are independent of the ICAV in accordance with the ethical requirements that are relevant to our audit of the financial statements in Ireland, including the Ethical Standard issued by the Irish Auditing and Accounting Supervisory Authority as applied to the public interest entities, and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Summary of our approach

Key audit matters	The key audit matters that we identified in the current year were: • Valuation of financial assets and liabilities at fair value through profit or loss • Existence of financial assets and liabilities at fair value through profit or loss
Materiality	The materiality that we used in the current year was 1% of average net assets determined in respect of each sub-fund and 0.50% of average net assets for the following sub-funds: 1. Fineco AM MSCI World Semiconductors and Semiconductor Equipment UCITS ETF 2. Fineco AM MSCI ACWI IMI Cyber Security UCITS ETF 3. Fineco AM MSCI World Metals and Mining UCITS ETF 4. Fineco AM MSCI USD IG Liquid SRI Sustainable Corporate Bond UCITS ETF 5. Fineco AM MSCI World Consumer Staples ESG Leaders UCITS ETF

Scoping	Our audit is a risk-based approach taking into account the structure of the ICAV, types of investments, the involvement of the third-party service providers, the accounting processes and controls in place and the industry in which the ICAV operates.
Significant changes in our approach	There have been no significant changes in our approach from our prior year audit.

Conclusions relating to going concern

In auditing the financial statements, we have concluded that the directors' use of the going concern basis of accounting in the preparation of the financial statements is appropriate.

Our evaluation of the directors' assessment of the ICAV's ability to continue to adopt the going concern basis of accounting included:

- Obtaining an understanding of the relevant controls in place regarding going concern as part of our audit risk assessment procedures.
- Holding discussions with management on the directors' going concern assessment, the future plans for the ICAV and the feasibility of those plans.
- Challenging the reasonableness of the key assumptions applied by the directors in their assessment.
- Reviewing all board meeting minutes during the period up to the date of approval of the financial statements, for evidence of any discussions and/or decisions that could impact the ICAV's ability to continue as a going concern.
- Reviewing the capital activity and NAV movements, subsequent to the financial year end.
- Assessing the adequacy of the relevant going concern disclosures made in the financial statements.

Based on the work we have performed, we have not identified any material uncertainties relating to events or conditions that, individually or collectively, may cast significant doubt on the ICAV's ability to continue as a going concern for a period of at least twelve months from when the financial statements are authorised for issue.

Our responsibilities and the responsibilities of the directors with respect to going concern are described in the relevant sections of this report.

Key audit matters

Key audit matters are those matters that, in our professional judgment, were of most significance in our audit of the financial statements of the current financial year and include the most significant assessed risks of material misstatement (whether or not due

Continued on next page/

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF FAM SERIES UCITS ICAV

to fraud) we identified, including those which had the greatest effect on: the overall audit strategy, the allocation of resources in the audit; and directing the efforts of the engagement team. These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on these matters.

Valuation of financial assets and liabilities at fair value through profit or loss

Key audit matter description

For the financial year ended, the financial assets and liabilities at fair value through profit or loss make up a significant percentage of the total net assets of the ICAV.

The valuation of financial assets and liabilities at fair value through profit or loss is considered a key audit matter as it is the most significant number on the Statement of Financial Position, is a key driver of performance and due to the potential for management judgement and estimation in the valuation.

As financial assets and liabilities at fair value through profit or loss are a key driver of performance and due to their significance to the net asset value, there is a risk that these investments might not be correctly valued, in accordance with IFRS.

Refer also to Notes 14 and 15 in the financial statements.

How the scope of our audit responded to the key audit matter

- We considered the valuation basis used in light of the valuation policy as stipulated in the ICAV's Prospectus documents and the requirements of IFRS.
- We obtained the BNP Paribas Fund Administration Services (Ireland) Limited (the "Administrator") ISAE 3402 Report and identified the key controls in place over the valuation process and reviewed those key controls for any exceptions.
- We independently valued exchange traded securities using our own market feeds.
- We reviewed the adequacy of the fair value levelling disclosures in the financial statements.
- We revalued swap positions on a sample basis.
- We reviewed the fair value levelling disclosures in the financial statements to ensure they were appropriate.

Existence of financial assets and liabilities at fair value through profit or loss

Key audit matter description

For the financial year ended, the financial assets and liabilities at fair value through profit or loss make up a significant percentage of the total net assets of the ICAV.

There is a risk that financial assets and liabilities at fair value through profit or loss recorded might not exist or might not be owned by the ICAV. Financial assets and liabilities at fair value through profit or loss are considered to be a key driver for the ICAV's performance.

Therefore, due to the significance of investments to the ICAV's financial statements, we have determined this as a key audit matter.

Refer also to Note 14 in the financial statements.

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF FAM SERIES UCITS ICAV

How the scope of our audit responded to the key audit matter

- We obtained the BNP Paribas Fund Administration Services (Ireland) Limited (the "Administrator") ISAE 3402 Report and identified the key controls in place over the reconciliation process and reviewed those key controls for any exceptions.
- We obtained direct confirmation of the investments of the ICAV from the Depositary and brokers at year-end. Any reconciling items between the confirmations and the ICAV's investment portfolios were investigated to ensure that trades were recorded in the correct reporting period.
- We completed alternative procedures in relation to a number of positions for which confirmations were not available at the issuance of this report.

Our audit procedures relating to these matters were designed in the context of our audit of the financial statements as a whole, and not to express an opinion on individual accounts or disclosures. Our opinion on the financial statements is not modified with respect to any of the risks described above, and we do not express an opinion on these individual matters.

Our application of materiality

We define materiality as the magnitude of misstatement in the financial statements that makes it probable that the economic decisions of a reasonably knowledgeable person would be changed or influenced. We use materiality both in planning the scope of our audit work and in evaluating the results of our work.

Based on our professional judgement, we determined materiality for the financial statements as a whole as follows:

Basis for determining materiality	The materiality that we used in the current year was 1% of average net assets determined in respect of each sub-fund and 0.50% of average net assets for the following sub-funds: 1. Fineco AM MSCI World Semiconductors and Semiconductor Equipment UCITS ETF 2. Fineco AM MSCI ACWI IMI Cyber Security UCITS ETF 3. Fineco AM MSCI World Metals and Mining UCITS ETF 4. Fineco AM MSCI USD IG Liquid SRI Sustainable Corporate Bond UCITS ETF 5. Fineco AM MSCI World Consumer Staples ESG Leaders UCITS ETF 6. Fineco AM MSCI World Financials ESG Leaders UCITS ETF 7. Fineco AM MSCI World Information Technology ESG Leaders 20% Capped UCITS ETF 8. Fineco AM MSCI USD HY SRI Sustainable Corporate Bond UCITS ETF 9. Fineco AM MSCI EUR IG SRI Sustainable ex Fossil Fuel Corporate Bond UCITS ETF 10. Fineco AM MSCI EUR HY SRI Sustainable Corporate Bond UCITS ETF 11. Fineco AM MSCI EUR IG SRI Sustainable ex Fossil Fuel (1-3y) Corporate Bond UCITS ETF 12. Fineco AM MarketVector Artificial Intelligence ESG UCITS ETF 13. Fineco AM MarketVector Japan Quality Tilt ESG UCITS ETF 14. Fineco AM MarketVector Bioproduction Tech and Tools ESG UCITS ETF 15. Fineco AM MarketVector Global Clean Energy Transition ESG UCITS ETF 16. Fineco AM MarketVector Global Metaverse and e-Games ESG UCITS ETF
Rationale for the benchmark applied	The Net Asset Value of the ICAV is the primary indicator of the size and performance of the ICAV and is considered the key area of interest for the shareholders, who are the primary users of the financial statements. The use of the average net asset value is considered the industry practice benchmark for Investment Funds.

/Continued from previous page

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF FAM SERIES UCITS ICAV

We set performance materiality at a level lower than materiality to reduce the probability that, in aggregate, uncorrected and undetected misstatements exceed the materiality for the financial statements as a whole.

Performance materiality was set at 50% of materiality for the 2024 audit (2023: 50%). In determining performance materiality, we considered the following factors:

- our understanding of the ICAV;
- the quality of the control environment;
- the nature and extent of misstatements identified in previous audits; and
- our expectations in relation to misstatements in the current period.

We agreed with the Board of Directors that we would report to them all audit differences in excess of 5% of materiality (2023 : 5% of materiality) as well as differences below that threshold that, in our view, warranted reporting on qualitative grounds. We also report to the Board of Directors on disclosure matters that we identified when assessing the overall presentation of the financial statements.

An overview of the scope of our audit

Our audit is a risk based approach taking into account the structure of the ICAV, types of investments, the involvement of the third parties service providers, the accounting processes and controls in place and the industry in which the ICAV operates. The ICAV is incorporated as an Irish collective asset management vehicle with variable capital and segregated liability between sub-funds. The ICAV is authorised by the Central Bank of Ireland (the "Central Bank") as a qualifying investor alternative investment fund.

The ICAV is organised as an umbrella fund with segregated liability between sub-funds. We assess the risks of each sub-fund separately. We have conducted our audit based on the books and records maintained by the administrator of FAM Series ICAV at Termini, 3 Arkle Road, Sandyford, Dublin 18, D18 C9C5, Ireland.

Other information

The other information comprises the information included in the Annual Report and Audited Financial Statements, other than the financial statements and our auditor's report thereon. The directors are responsible for the other information contained within the Annual Report and Audited Financial Statements. Our opinion on the financial statements does not cover the other information and, except to the extent otherwise explicitly stated in our report, we do not express any form of assurance conclusion thereon.

Our responsibility is to read the other information and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit or otherwise appears to be materially misstated. If we identify such material inconsistencies or apparent material misstatements, we are required to determine whether there is a material misstatement in the financial statements or a material misstatement of the other information. If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact.

We have nothing to report in this regard.

Responsibilities of directors

As explained more fully in the Statement of Directors' Responsibilities, the directors are responsible for the preparation of financial statements that give a true and fair view and have been properly prepared in accordance with the ICAV Act, and for such internal control as the directors determine is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the directors are responsible for assessing the ICAV's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the directors either intend to liquidate the ICAV or to cease operations, or have no realistic alternative but to do so.

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF FAM SERIES UCITS ICAV

Auditor's responsibilities for the audit of the financial statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs (Ireland) will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

A further description of our responsibilities for the audit of the financial statements is located on IAASA's website at: <https://iaasa.ie/publications/description-of-the-auditors-responsibilities-for-the-audit-of-the-financial-statements>. This description forms part of our auditor's report.

Extent to which the audit was considered capable of detecting irregularities, including fraud

Irregularities, including fraud, are instances of non-compliance with laws and regulations. We design procedures in line with our responsibilities, outlined above, to detect material misstatements in respect of irregularities, including fraud. The extent to which our procedures are capable of detecting irregularities, including fraud is detailed below.

Identifying and assessing potential risks related to irregularities

In identifying and assessing risks of material misstatement in respect of irregularities, including fraud and non-compliance with laws and regulations, we considered the following:

- the nature of the industry and sector, control environment and business performance;
- results of our enquiries of management about their own identification and assessment of the risks of irregularities;
- any matters we identified having obtained and reviewed the ICAV's documentation of their policies and procedures relating to:
 - identifying, evaluating and complying with laws and regulations and whether they were aware of any instances of non-compliance;
 - detecting and responding to the risks of fraud and whether they have knowledge of any actual, suspected or alleged fraud;
- the internal controls established to mitigate risks of fraud or non-compliance with laws and regulations;
- the matters discussed among the audit engagement team and relevant internal specialists, including IT and valuations regarding how and where fraud might occur in the financial statements and any potential indicators of fraud.

As a result of these procedures, we considered the opportunities and incentives that may exist within the organisation for fraud and identified the greatest potential for fraud in the following areas: Valuation of financial assets and liabilities at fair value through profit or loss and Revenue Recognition. In common with all audits under ISAs (Ireland), we are also required to perform specific procedures to respond to the risk of management override.

In common with all audits under ISAs (Ireland), we are also required to perform specific procedures to respond to the risk of management override.

We also obtained an understanding of the legal and regulatory framework that the ICAV operates in, focusing on provisions of those laws and regulations that had a direct effect on the determination of material amounts and disclosures in the financial statements. The key laws and regulations we considered in this context included the The key laws and regulations we considered in this context included the ICAV Act, Listing Rules and the applicable regulations..

Continued on next page/

/Continued from previous page

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF FAM SERIES UCITS ICAV

In addition, we considered provisions of other laws and regulations that do not have a direct effect on the financial statements but compliance with which may be fundamental to the ICAV's ability to operate or to avoid a material penalty. These included matters regulated by the Central Bank of Ireland.

Audit response to risks identified

As a result of performing the above, we identified 'Valuation of financial assets at fair value through profit or loss as a key audit matter related to the potential risk of fraud. The key audit matters section of our report explains the matter in more detail and also describes the specific procedures we performed in response to that key audit matter.

Our procedures to respond to risks identified included the following:

- reviewing the financial statement disclosures and testing to supporting documentation to assess compliance with provisions of relevant laws and regulations described as having a direct effect on the financial statements;
- enquiring of management and the Board of Directors concerning actual and potential litigation and claims;
- performing analytical procedures to identify any unusual or unexpected relationships that may indicate risks of material misstatement due to fraud;
- reading minutes of meetings of those charged with governance and reviewing correspondence with the Central Bank of Ireland; and
- In addressing the risk of fraud in Revenue Recognition, independently valuing all exchange traded securities using our own market feeds and completing an unrealised gain/loss reconciliation.
- In addressing the risk of fraud through management override of controls, testing the appropriateness of journal entries and other adjustments; assessing whether the judgements made in making accounting estimates are indicative of a potential bias; and evaluating the business rationale of any significant transactions that are unusual or outside the normal course of business.

We also communicated relevant identified laws and regulations and potential fraud risks to all engagement team members including internal specialists, and remained alert to any indications of fraud or non-compliance with laws and regulations throughout the audit.

Report on other legal and regulatory requirements

Matters on which we are required to report by the ICAV Act and the applicable Regulations

In our opinion, the information given in the directors' report is consistent with the financial statements and the directors' report has been prepared in accordance with the ICAV Act.

Matters on which we are required to report by exception

Based on the knowledge and understanding of the ICAV and its environment obtained in the course of the audit, we have not identified material misstatements in the directors' report.

We have nothing to report in respect of the provisions in the ICAV Act which require us to report to you if, in our opinion, the disclosures of directors' remuneration specified by the ICAV Act are not made.

Opinion on other matters prescribed by the applicable Regulations

Based solely on the work undertaken in the course of the audit, we report that:

- We have obtained all the information and explanations which we consider necessary for the purposes of our audit.
- In our opinion the accounting records of the ICAV were sufficient to permit the financial statements to be readily and properly audited.
- The financial statements are in agreement with the accounting records.

INDEPENDENT AUDITOR'S REPORT TO THE SHAREHOLDERS OF FAM SERIES UCITS ICAV

Other matters which we are required to address

We were appointed by the Board of Directors on 24 July 2018 to audit the financial statements for the year ending 31 December 2018 and subsequent financial periods. The period of total uninterrupted engagement including previous renewals and reappointments of the firm is 7 years, covering the year ending 31 December 2024.

The non-audit services prohibited by IAASA's Ethical Standard were not provided and we remained independent of the ICAV in conducting the audit.

Our audit opinion is consistent with the additional report to the Board of Directors we are required to provide in accordance with ISA (Ireland) 260.

Use of our report

This report is made solely to the ICAV's shareholders, as a body, in accordance with Section 120(1) (b) of the ICAV Act. Our audit work has been undertaken so that we might state to the ICAV's shareholders those matters we are required to state to them in an auditor's report and for no other purpose. To the fullest extent permitted by law, we do not accept or assume responsibility to anyone other than the ICAV and the ICAV's shareholders as a body, for our audit work, for this report, or for the opinions we have formed.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024

1. General Information

FAM Series UCITS ICAV (the “ICAV”) is an umbrella Irish Collective Asset-management Vehicle with segregated liability between its Sub-Funds and authorised pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations, 2011 (as amended) and the Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (as amended). The ICAV was incorporated on 8 March 2018. On 7 October 2022, FAM Series UCITS ICAV listed on the Italian Stock Exchange (Borsa Italiana).

The ICAV is structured as an umbrella entity composed of different sub-funds (the “Sub-Funds”). Each Sub-Fund will represent a separate portfolio of assets of the ICAV and may have more than one Class or Series of Shares allocated to it.

Effective from 30 December 2024, the following Sub-Funds have updated the supplements as the Sub-Fund investment manager's intention is to pursue a new investment objective with the aim to provide dividends at certain dates, while protecting the NAV of EUR 100 at the new defined maturity intended to be 3 years from the expiration of the previous term. As a result, the following Sub-Funds have updated the supplement with new maturity date and has been renamed to the following:

Previous Name	New Fund Name post maturity	New Maturity Date
Smart Global Defence FAM Fund 2024	Smart Global Defence FAM Fund 2029 Roll	12 January 2029
Smart Global Defence FAM Fund 2024 USD	Smart Global Defence FAM Fund 2029 USD Roll	12 January 2029

Effective 1 October 2024, Allianz Global Investors GmbH ceased as the investment advisor of the following Funds:

- Fineco AM Global Equities Income Fund
- Fineco AM Global Premium Equities Fund
- Fineco AM Euro Credit Bond Fund

The investment objective of the below Sub-Funds is to achieve income and capital growth:

- Fidelity Euro Bond FAM Fund
- Fidelity Euro Short Term Bond FAM Fund

The investment objective of Fidelity Global Dividend FAM Fund is to achieve income and long-term capital growth principally through investment in global income producing equities.

The investment objective of Fidelity Focus Equity FAM Fund is to achieve long-term capital growth from a portfolio primarily made up of the equity securities of companies around the world.

The investment objective of US Equity Value FAM Fund is to provide long-term capital growth by investing primarily in a value style biased portfolio of US companies.

The investment objective of M&G North American Value FAM Fund is to achieve total returns over the medium term of typically three to five years, through a combination of income and capital appreciation.

The investment objective of the below Sub-Funds is to maximise total return, consisting of income and capital appreciation:

- Amundi Emerging Markets Bond FAM Fund
- European High Yield Bond FAM Fund
- Vontobel Emerging Markets Debt FAM Fund

The investment objective of Amundi Strategic Bond FAM Fund is to achieve capital appreciation over the medium to long term.

The investment objective of Amundi European Equity Value FAM Fund is capital appreciation over the medium to long term through investment in a diversified portfolio of European equity securities.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

1. General Information (continued)

The investment objective of the below Sub-Funds is to maximise total returns:

- Emerging Markets Bond Hard Currency FAM Fund
- Euro Bond FAM Fund
- Euro Corporate Fixed Income FAM Fund
- Euro Short Duration Bond FAM Fund

The investment objective of the below Sub-Funds is to maximise total returns through a combination of income and capital appreciation:

- Fineco AM European Corporate Bond Fund
- M&G Optimal Income FAM Fund

The investment objective of Schroder Euro Bond FAM Fund is to provide capital growth and income over the long term by investing in fixed and floating rate bonds denominated in Euro or hedged back to Euro.

The investment objective of European Equity FAM Fund is to provide long-term capital growth by investing primarily in European companies.

The investment objective of the below Sub-Funds is to achieve long-term capital growth:

- Fineco AM Global Premium Equities Fund
- Fineco AM Global Equity Fund
- Flexible Equity Strategy FAM Fund

The investment objective of Fineco AM Euro Corp Bonds Fund is to generate a capital appreciation that exceeds the iBoxx Euro Corporates Index (the “Index”).

The investment objective of Fineco AM Investment Grade Euro Aggregate Bond Fund is to achieve total returns, meaning capital appreciation plus income from its investments, through investment in bonds.

The investment objective of Fineco AM Euro Corporate Bond Fund is to provide a total return (income and capital growth) in excess of that generated by the Index.

The investment objective of Fineco AM Global Equities Income Fund is to generate high levels of income, with the potential for long-term capital growth.

The investment objective of Invesco Global Total Return Bond FAM Fund is to maximize total return primarily through investment in a flexible allocation of fixed income securities (including corporate bonds, government bonds, treasury bonds, municipal bonds and asset backed securities).

The investment objective of Nordea Stable Performance FAM Fund is to preserve Shareholder’s capital and provide stable growth to Shareholders over the medium to long term.

The investment objective of Fineco AM Euro Credit Bond Fund is to provide long term total return (meaning capital growth and income) by investing in a portfolio of Investment Grade rated fixed income securities (including corporate bonds and treasury bonds) denominated in Euro.

The investment objective of Euro High Yield Bond FAM Fund is to provide long term total return (meaning capital growth and income) by primarily investing in a portfolio of Euro denominated fixed income securities (including corporate bonds and treasury bonds).

The investment objective of Emerging Markets Debt FAM Fund is to provide income and capital growth over the long term.

The investment objective of Flexible Income FAM Fund is to provide regular income with the prospect of long-term capital growth.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

1. General Information (continued)

The investment objective of Infusive Consumer Alpha Global Leaders FAM Fund, Global Disruptive Opportunities FAM Fund and Medtech FAM Fund is to provide capital appreciation over the long term.

The investment objective of Fidelity Sustainable Water and Waste FAM Fund is to provide long term capital growth by investing primarily in equity securities of companies.

The investment objective of JPMorgan China A-Shares Opportunities FAM Fund is to provide long term capital growth by investing primarily in companies of the People's Republic of China (PRC).

The investment objective of Diversity and Inclusion FAM Fund is to maximise total returns through a combination of income and capital appreciation through investing in companies that have demonstrable gender and/or ethnic diversity, or which provide solutions empowering social equality.

The investment objective of Global Listed Infrastructure FAM Fund is to deliver a higher total return (combination of capital growth and income) than that of global equities markets over any five-year period.

The investment objective of European STARS Equity FAM Fund is to achieve long-term capital growth from a portfolio primarily (at least 75% of the Net Asset Value of the Fund) made up of the equity securities of companies across any sector and market capitalisation that are domiciled in, or carrying out the main part of their economic activity in, Europe.

The investment objective of Global Sustain Paris Aligned FAM Fund is to provide a higher total return (capital growth plus income) than that of global equity markets over any five-year period and to invest in companies that contribute towards the Paris Agreement climate change goal.

The investment objective of North American STARS Equity FAM Fund is to achieve long-term capital growth from a portfolio primarily (at least 75% of the Net Asset Value of the Fund) made up of the equity securities of companies across any sector and market capitalisation that are domiciled in, or carrying out the main part of their economic activity in, North America.

The investment objective of Global STARS Equity FAM Fund is to achieve long-term capital growth from a portfolio primarily (at least 75% of the Net Asset Value of the Fund) made up of the equity securities of companies across any sector and market capitalisation from anywhere in the world, including those in countries considered to be emerging markets.

The investment objective of the Changing Lifestyles FAM Fund is to provide capital growth by investing in equity and equity related securities of companies worldwide that the Investment Manager believes will benefit from the changing requirements of modern consumers.

The investment objective of the Morgan Stanley US Advantage FAM Fund is to achieve long-term capital appreciation.

The investment objective of Banor Club Fineco AM Fund is to achieve capital appreciation over the long term through investment in a diversified portfolio of assets.

The investment objective of the Sustainable Future Connectivity FAM Fund is to achieve long-term capital growth from a portfolio made up for at least 70% of the equity securities of companies around the world, including those in countries considered to be emerging markets, deemed to maintain environmental, social and governance (“ESG”) characteristics.

Effective 5 April 2024, Fidelity World FAM Fund changed its name to Fidelity Focus Equity FAM Fund.

The assets of a Sub-Fund will be invested separately in accordance with the investment objectives and policies of the Sub-Fund as set out in the Prospectus.

In respect of each Sub-Fund, Fineco Asset Management Designated Activity Company (the “Manager”) has appointed an Investment Manager to manage the assets and investments of the Sub-Fund in conformity with the Sub-Fund’s investment objectives and policies. The Manager shall be entitled to receive annual management fees (see Note 13). The Investment Managers shall be entitled to receive an annual investment management fee which shall be paid out of the fees of the Manager and not out of the assets of the Sub-Funds.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

1. General Information (continued)

(a) Basis of Preparation

These Financial Statements have been prepared in accordance with International Financial Reporting Standards ('IFRS') issued by the International Accounting Standards Board ("IASB") and have been prepared on the historical cost basis except for certain financial instruments that are measured at fair values at the end of each reporting period.

Going Concern

The ICAV's management has made an assessment of the ICAV's ability to continue as a going concern and is satisfied that the ICAV has the resources to continue in business for the foreseeable future. Furthermore, management is not aware of any material uncertainties that may cast significant doubt upon the ICAV's ability to continue as a going concern. Therefore, the Financial Statements are prepared on the going concern basis.

New standards and interpretations effective 1 January 2024

Classification of Liabilities as Current or Non-current - Amendments to IAS 1

In January 2020, the International Accounting Standards Board issued amendments to paragraphs 69 to 76 of IAS 1 Presentation of Financial Statements to specify the requirements for classifying liabilities as current or non-current.

In particular, the amendments which became effective 1 January 2024 clarify:

- What is meant by a right to defer settlement.
- That a right to defer must exist at the end of the reporting period.
- That classification is unaffected by the likelihood that an entity will exercise its deferral right.
- That only if an embedded derivative in a convertible liability is itself an equity instrument, would the terms of a liability not impact its classification.

The ICAV considered the amendments and noted that there is no impact on the measurement, recognition or presentation of any items in the ICAV's Financial Statements.

Amendments to IAS 7 Statement of Cash Flows and IFRS 7 Financial Instruments Disclosures - Supplier Finance Arrangements

The amendments relate to disclosure requirements in connection with supplier financing arrangements - also known as supply chain financing, financing of trade payables or reverse factoring arrangements.

The new requirements supplement those already included in IFRS standards and include disclosures about:

- Terms and conditions of supplier financing arrangements.
- The amounts of the liabilities that are the subject of such agreements, for which part of them the suppliers have already received payments from the financiers and under which item these liabilities are shown in the balance sheet
- The ranges of due dates
- Information on liquidity risk

The ICAV considered the amendments and noted that there is no impact on the measurement, recognition or presentation of any items in the ICAV's Financial Statements

Amendments to IFRS 16 - Lease Liability in a Sale and Leaseback

The amendment clarifies how a seller-lessee subsequently measures sale and leaseback transactions that satisfy the requirements in IFRS 15 to be accounted for as a sale.

The ICAV considered the amendment and noted that there is no impact on the measurement, recognition or presentation of any items in the ICAV's Financial Statements

There are no other standards, interpretations or amendments to existing standards that are not yet effective that would be expected to have a significant impact on the ICAV

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

1. General Information (continued)

(b) New standards, amendments and interpretations issued but not effective for the financial year beginning 1 January 2024 and not early adopted

Lack of Exchangeability - Amendments to IAS 21

In August 2023, the International Accounting Standards Board (IASB) amended IAS 21.

In particular, the amendments which will become effective 1 January 2025 clarify:

- when a currency is exchangeable into another currency; and
- how a company estimates a spot rate when a currency lacks exchangeability.

The ICAV considered the amendments and noted that there is no impact on the measurement, recognition or presentation of any items in the ICAV's Financial Statements.

Amendments to IFRS 9 Financial Instruments and IFRS 7 Financial Instruments: Disclosures

The IASB's amendments to IFRS 9 and IFRS 7 issued in May 2024 are effective for annual periods beginning on or after 1 January 2026. Earlier application of either all the amendments at the same time or only the amendments to the classification of financial assets is permitted. An entity is required to apply the amendments retrospectively.

The amendments to IFRS 9 address the following topics:

- Derecognition of a financial liability settled through electronic transfer. The application guidance in IFRS 9 has been amended to clarify the date of initial recognition or derecognition of financial assets and financial liabilities. The amendments permit an entity to consider a financial liability (or part of it) that will be settled in cash using an electronic payment system as discharged before the settlement date if specified criteria are met.
- The amendments to the application guidance of IFRS 9 provide guidance on how an entity can assess whether contractual cash flows of a financial asset are consistent with a basic lending arrangement.
- The amendments enhance the description of the term 'non-recourse'. Under the amendments, a financial asset is considered to have non-recourse features if an entity's ultimate right to receive cash flows is contractually limited to the cash flows generated by specified assets. In other words, the entity is primarily exposed to the specified assets' performance risk rather than the debtor's credit risk.
- The amendments clarify the characteristics of contractually linked instruments that distinguish them from other transactions. The amendments also note that not all transactions with multiple debt instruments meet the criteria of transactions involving multiple contractually linked instruments and provide an example.

The amendments to IFRS 7 address the disclosure of:

- investments in equity instruments designated at FVTOCI
- contractual terms that could change the timing or amount of contractual cash flows

The ICAV is still in the process of assessing the impact of the new accounting standard and the impact that the application of these amendments may have on the financial statements.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

1. General Information (continued)

(b) New standards, amendments and interpretations issued but not effective for the financial year beginning 1 January 2024 and not early adopted (continued)

IFRS 18 - Presentation and Disclosure in Financial Statements

In April 2024, the IASB published IFRS 18 which will significantly update the requirements for presentation and disclosures in the financial statements, with a particular focus on improving the reporting of financial performance.

IFRS 18 will replace IAS 1 Presentation of financial statements and will be effective for annual reporting periods beginning on or after 1 January 2027 with early application permitted.

The new accounting standard introduces the following key new requirements.

- Entities are required to classify all income and expenses into five categories in the statement of profit or loss, namely the operating, investing, financing, discontinued operations and income tax categories. Entities are also required to present a newly-defined operating profit subtotal. Entities' net profit will not change as a result of applying IFRS 18.
- Management-defined performance measures (MPMs) are disclosed in a single note in the financial statements.
- Enhanced guidance is provided on how to group information in the financial statements. In addition, all entities are required to use the operating profit subtotal as the starting point for the statement of cash flows when presenting operating cash flows under the indirect method.

The ICAV is still in the process of assessing the impact of the new accounting standard, particularly with respect to the structure of the ICAV's statement of profit or loss, the statement of cash flows and the additional disclosures required for MPMs. The ICAV is also assessing the impact on how information is grouped in the financial statements, including for items currently labelled as 'other'.

There are no other standards, interpretations or amendments to existing standards that are not yet effective that would be expected to have a significant impact on the ICAV.

2. Material Accounting Policies

The material accounting policies applied in preparation of these Financial Statements are set out below. These policies have been consistently applied to all years presented, unless otherwise stated.

2.1 Accounting Policies

(a) Financial Assets and Liabilities

(i) Classification

The ICAV classifies financial assets and financial liabilities into the following categories:

Financial assets at Fair Value through Profit or Loss ("FVTPL"):

Designated at FVTPL:

- *Transferable Securities*
 - Bonds
 - Equities
 - Investment funds
 - Exchange traded commodities

FAM Series UCITS ICAV

2. Material Accounting Policies (continued)

2.1 Accounting Policies (continued)

(a) Financial Assets and Liabilities (continued)

(i) Classification (continued)

- *Derivative Instruments*
 - Futures contracts
 - Forward currency contracts
 - Interest rate swaps
 - Total return swaps
 - Credit default swaps
 - Option contracts
 - Rights and Warrants
 - Contracts for difference
- *Money Market Instruments*
 - Commercial papers
 - Treasury bills

Financial assets at amortised cost:

- *Loans and receivables: cash and cash equivalents and interest and other assets.*

Financial liabilities at FVTPL:

Designated at FVTPL:

- *Derivative Instruments*
 - Futures contracts
 - Forward currency contracts
 - Interest rate swaps
 - Total return swaps
 - Option contracts
 - Rights and Warrants
 - Contracts for difference

Financial liabilities at amortised cost:

- *Other liabilities: accrued expenses.*

The ICAV designates all equity securities, bonds, funds, treasury bills, exchange traded commodities, futures contracts, forward currency contracts, interest rate swaps, option contracts, contract for differences and rights and warrants at FVTPL on initial recognition because it manages these securities on a fair value basis in accordance with its documented investment strategy. Internal reporting and performance measurement of these securities are on a fair value basis.

A non-derivative financial asset with fixed or determinable payments may be classified as a loan and receivable unless it is quoted in an active market or is an asset for which the holder may not recover substantially all of its initial investment, other than because of credit deterioration.

(ii) Recognition

Financial assets and financial liabilities at FVTPL are initially recognised at fair value on the trade date, which is the date on which the ICAV becomes a party to the contractual provisions of the instrument. Other financial assets and financial liabilities are recognised on the date on which they are originated.

Purchases and sales of financial instruments are accounted for on the trade date. Realised gains and losses on disposals of financial instruments are calculated using the First In, First Out ("FIFO") method.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

2. Material Accounting Policies (continued)

2.1 Accounting Policies (continued)

(iii) Initial Measurement

Financial instruments categorised at FVTPL are measured initially at fair value, with transaction costs for such instruments being recognised directly in the Statement of Comprehensive Income. Financial assets and financial liabilities are recognised on the Statement of Financial Position when the ICAV becomes party to the contractual provisions of the instrument. A regular purchase of financial assets is recognised using trade date accounting. From this date any gains or losses arising from changes in fair value of the financial assets or financial liabilities are recorded.

(a) Financial Assets and Liabilities (continued)

(iv) Fair Value Measurement

‘Fair value’ is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date in the principal or, in its absence, the most advantageous market to which the ICAV has access at that date. The fair value of a liability reflects its non-performance risk.

When available, the ICAV measures the fair value of an instrument using the quoted price in an active market for that instrument. A market is regarded as ‘active’ if transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an on-going basis.

If there is no quoted price in an active market, then the ICAV uses valuation techniques that maximise the use of relevant observable inputs and minimise the use of unobservable inputs. The chosen valuation technique incorporates all of the factors that market participants would take into account in pricing a transaction.

Investments in open-ended investment funds are valued at fair value at the latest available unaudited net asset value for the shares or units obtained from the relevant administrator. The changes in the daily net asset value of these shares are recognised as movement in unrealised gains/(losses) on financial assets and liabilities held at FVTPL in the Statement of Comprehensive Income.

The ICAV recognises transfers between levels of the fair value hierarchy as at the end of the reporting period during which the change has occurred.

(v) Amortised Cost Measurement

The amortised cost of a financial asset or financial liability is the amount at which the financial asset or financial liability is measured at initial recognition, minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between the initial amount recognised and the maturity amount, minus any reduction for impairment.

(vi) Impairment

IFRS 9 replaces the ‘incurred loss’ model in IAS 39 with an ‘expected credit loss’ (“ECL”) model. The new impairment model applies to financial assets measured at amortised cost and debt investments at FVOCI, but not to investments in equity instruments. Under IFRS 9, credit losses are recognised earlier than under IAS 39.

A financial asset or liability not classified at FVTPL is assessed at each reporting date to determine whether there is objective evidence of impairment. A financial asset or a group of financial assets is ‘impaired’ if there is objective evidence of impairment as a result of one or more events that occurred after the initial recognition of the asset(s) and that loss event(s) had an impact on the estimated future cash flows of that asset(s) that can be estimated reliably.

Objective evidence that financial assets are impaired includes significant financial difficulty of the borrower or issuer, default or delinquency by a borrower, restructuring of the amount due on terms that the ICAV would not otherwise consider, indications that a borrower or issuer will enter bankruptcy, or adverse changes in the payment status of the borrower.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

2. Material Accounting Policies (continued)

2.1 Accounting Policies (continued)

(a) Financial Assets and Liabilities (continued)

(vi) Impairment (continued)

An impairment loss in respect of a financial asset measured at amortised cost is calculated as the difference between its carrying amount and the present value of the estimated future cash flows discounted at the asset's original effective interest rate. Losses are recognised in profit or loss and reflected in an allowance account against receivables. Interest on the impaired asset continues to be recognised, if an event occurring after the impairment was recognised causes the amount of impairment loss to decrease, then the decrease in impairment loss is reversed through profit or loss.

(vii) Derecognition

The ICAV derecognises a financial asset when the contractual rights to the cash flows from the asset expire, or it transfers the rights to receive the contractual cash flows in a transaction in which substantially all of the risks and rewards of ownership of the financial asset are transferred or in which the ICAV neither transfers nor retains substantially all of the risks and rewards of ownership and does not retain control of the financial asset.

On derecognition of a financial asset, the difference between the carrying amount of the asset (or the carrying amount allocated to the portion of the asset that is derecognised) and the consideration received (including any new asset obtained less any new liability assumed) is recognised in profit or loss. Any interest in such transferred financial assets that is created or retained by the ICAV is recognised as a separate asset or liability.

The ICAV enters into transactions whereby it transfers assets recognised on its Statement of Financial Position, but retains either all or substantially all of the risks and rewards of the transferred assets. If all or substantially all of the risks and rewards of the transferred assets are retained, then transferred assets are not derecognised. Transfer of assets usually includes sale and repurchase agreements where all or substantially all of the risks and rewards are retained.

The ICAV derecognises a financial liability when its contractual obligations are discharged, cancelled, or expired.

(b) Transferable Securities

Investment Funds

The Sub-Funds invest in a diversified portfolio of collective investment schemes, whether open or closed ended, regulated or unregulated, including investment companies, investment trusts and/or investment limited partnerships, which the Investment Manager considers will give consistent returns to investors in line with the target returns of the Sub-Funds and which may include investment in other Sub-Funds of the ICAV ("Underlying Funds").

(c) Derivative Instruments

The Sub-Funds may enter into derivatives instruments for the purposes of efficient portfolio management.

Forward currency contracts

When entering into a forward foreign currency exchange contract, the Sub-Fund agrees to receive or deliver a fixed quantity of foreign currency for an agreed price upon an agreed future date. These contracts are valued daily at the forward rate and the Sub-Fund's equity therein, representing unrealised gains or losses on the contracts, is included in the Statement of Comprehensive Income. The unrealised gain/(loss) on open forward currency contracts is calculated by reference to the difference between the contracted rate and the rate to close out the contract. Realised and movement in unrealised gains or losses are included in the Statement of Comprehensive Income.

Futures contracts

Futures contracts are valued at the last traded price on the Sub-Fund's valuation date or if no price at the valuation date, the recent last traded price. Any gain or loss in fair value is recorded as unrealised gains or losses in the Statement of Comprehensive Income. Upon settlement a realised gain or loss is recognised in the Statement of Comprehensive Income.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

2. Material Accounting Policies (continued)

2.1 Accounting Policies (continued)

(c) Derivative contracts (continued)

Interest rate swaps

Interest rate swaps involve the exchange by the Sub-Fund with another party for their respective commitment to pay or receive interest on the notional amount of principal. The changes in contract values are recorded as unrealised gains or losses and the Sub-Funds recognise a realised gain or loss when the contract is closed. Movement of unrealised gains and losses on interest rate swaps are recognised in the Statement of Comprehensive Income.

Total return swaps

A total return swap is a derivative contract between two parties where they agree to exchange the investment return and income on an underlying asset or a basket of assets for the investment return and income on a different underlying asset or a basket of assets which is agreed between the parties. Realised and movement of unrealised gains and losses are recognized in the Statement of Comprehensive Income.

Credit default swaps

Credit default swap contracts involve an arrangement between two parties, which allows one party to protect against losses incurred as a result of default by a specified reference entity. Realised and movement of unrealised gains and losses are recognized in the Statement of Comprehensive Income.

Rights and warrants

Rights and warrants are recorded as an asset or liability at their fair value on the Statement of Financial Position. Fair value as determined by the Administrator is the quoted market price as provided by electronic feed from one or more reputable price vendors. The change in fair value, if any, is recorded as an unrealised gain or loss in the Statement of Comprehensive Income. Realised gains or losses on warrants are shown in the Statement of Comprehensive Income. On the expiry of a warrant the amount previously recognised in the Statement of Financial Position is recognised in the Statement of Comprehensive Income as a realised gain or loss.

Option contracts

Option contracts give the right, but not the obligation, to buy or sell within a limited time, a specific financial instrument at a contracted price that may also be settled in cash, based on differentials between specified indices or prices. Options written create an obligation to buy or sell within a limited time, the specific financial instrument at a contracted price that may also be settled in cash, based on differentials between specified indices or prices.

There were open forward currency contracts, interest rate swaps, option contracts, futures contracts and rights and warrants at 31 December 2024, and these are disclosed on the relevant Condensed Schedule of Investments of each Sub-Fund.

Contracts for differences

Contracts for differences are over-the-counter derivatives which take advantage of economic benefits which are not afforded through investing directly in certain securities markets. The Sub-Fund may purchase an equity contract for differences as a means of gaining exposure to the economic performance and cash flows of an equity security without the need for taking or making physical delivery of the security. A contract for differences is a financial instrument linked to an underlying share price. Consequently, no rights are acquired or obligations incurred relating to the underlying share and the Sub-Fund may buy or sell depending on the Investment Manager's view of a ICAV's share price. Contracts for differences are highly leveraged instruments and for a small deposit it is possible for the Sub-Fund to hold a position much greater than would be possible with a traditional investment. These are valued daily based on quoted market prices at the Statement of Financial Position dates. The fair value of contracts for differences is the difference between the contracted price and the volume weighted average price of the financial instrument multiplied by the number of shares specified within the contract.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

2. Material Accounting Policies (continued)

2.1 Accounting Policies (continued)

(d) Offsetting Financial Instruments

Financial assets and liabilities are offset and the net amount reported on the Statement of Financial Position when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis, or realise the assets and settle the liability simultaneously.

(e) Redeemable Participating Shares

The issued redeemable participating Shares (“Shares”) is at all times equal to the net asset value of the ICAV. The Shares are redeemable at the shareholders option and are classified as financial liabilities. The Shares can be put back to the ICAV at any time for cash equal to a proportionate share of the ICAV’s net asset value. The Shares are carried at the redemption amount that is payable at the Statement of Financial Position date if the holder exercises the right to put the share back to the ICAV. Each Sub-Fund’s Net Asset Value (“NAV”) per Share is calculated by dividing the NAV of that Sub-Fund, being the value of its assets less its liabilities, by the numbers of shares of that Sub-Fund then in issue.

(f) Use of Judgements and Estimates

The preparation of Financial Statements in conformity with IFRS as adopted by the EU requires management to make judgements, estimates and assumptions that affect reported amounts of assets and liabilities and disclosure of contingent assets and liabilities as at the date of the Financial Statements. Estimates also affect the reported amounts of income and expenses for the reporting period in the Statement of Comprehensive Income. Actual results could differ from those estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the year in which the estimates are revised and in any future accounting periods affected. Information about assumptions and estimation uncertainties that have a significant risk of resulting in a material adjustment within the next financial year, as well as critical judgments in applying accounting policies that have the most significant effect on the amounts recognised in the Financial Statements are included in Note 14 and Note 15.

(g) Foreign Exchange

Items included in the ICAV’s Financial Statements are measured using the currency of the primary economic environment in which it operates (the “functional currency”). The functional currency for this ICAV is Euro (“EUR” or “€”) and each Sub-Fund’s base currency is disclosed below:

Sub-Fund	Base Currency
Fidelity Euro Bond FAM Fund	EUR

The ICAV has adopted the functional currency of each Sub-Fund as the presentation currency for these Financial Statements. Assets and liabilities expressed in currencies other than the functional currency are converted into the functional currency using the exchange rates prevailing as at the Statement of Financial Position date. Transactions in foreign currencies are translated into the Sub-Fund's functional currency at the transaction dates. Gains and losses on foreign exchange transactions are recognised in the Statement of Comprehensive Income in determining the results for the financial year.

(h) Income

Interest income is recognised in the Statement of Comprehensive Income at the effective interest rate method.

Dividends are recognised in the Statement of Comprehensive Income on the dates on which the relevant securities are listed as "ex-dividend". Dividend income is shown gross of any non-recoverable withholding taxes, which is disclosed separately in the Statement of Comprehensive Income, and net of any tax credits.

(i) Expenses

All expenses are recognised in the Statement of Comprehensive Income on an accruals basis.

FAM Series UCITS ICAV

2. Material Accounting Policies (continued)

2.1 Accounting Policies (continued)

(j) Cash and Cash Equivalents

Cash comprises cash at banks and bank overdrafts. Cash equivalents are short term (up to three months), highly liquid investments, that are readily convertible to known amounts of cash and which are subject to insignificant changes in value. For the financial years ended 31 December 2024 and 31 December 2023, cash equivalents held by the ICAV includes, commercial papers and treasury bills. They are held for the purpose of meeting short-term cash commitments rather than for investments or other purposes. The carrying amount of these assets is approximately equal to their fair value.

(k) Payable for Securities Purchased/Receivable for Securities Sold

Payable for securities purchased and receivable for securities sold include trades pending settlement.

(l) Redemptions Payable

Redemptions are recognized as liabilities when the amount requested by the unitholder in the irrevocable redemption notice becomes fixed.

(m) Subscriptions Receivable

Subscriptions receivable includes the amounts still to be collected from investors before the ICAV will issue the shares.

(n) Due from/to Brokers

Due from/to brokers represent margin accounts and cash collateral for borrowed securities. Margin accounts represent cash deposits with brokers, transferred as collateral against open derivative contracts.

(o) Organisational Costs

Costs incurred in organising the ICAV were amortised over the first five accounting periods of the ICAV as disclosed in the prospectus. This is not in accordance with IFRS but Management assessed the costs to be immaterial to the ICAV, please refer to Note 4 for details.

(p) Management Fee Rebate

The ICAV has rebate agreements with certain investment managers of the Underlying Funds. These rebates are recorded on an accruals basis in the Statement of Comprehensive income.

(q) Securities lending income

Securities lending income is earned from lending securities owned by the Sub-Fund to third party borrowers. Securities lending income is recognised in the Statement of Comprehensive Income on an accruals basis.

(r) Anti-Dilution Levy

The Directors reserve the right to impose “an anti-dilution levy” representing a provision for market spreads (the difference between the prices at which assets are valued and/or bought or sold), duties and charges and other dealing costs relating to the acquisition or disposal of assets and to preserve the value of the underlying assets of a Sub-Fund, in the event of receipt for processing of net subscriptions or net redemptions exceeding such percentage of the NAV of the Sub-Funds as determined by the Directors from time to time (including subscriptions and/or redemptions which would be effected as a result of requests for conversion from one Class into another Class). Any such provision will be deducted from the subscription proceeds in the case of net subscription requests exceeding the threshold of a Sub-Fund and deducted from the redemption proceeds in the case of net redemption requests exceeding the threshold of a Sub-Fund including the price of shares issued or redeemed as a result of requests for conversion. Any such sum will be paid into the account of the relevant Sub-Fund.

8. Share Capital

The actual value of paid up share capital of the ICAV shall at all times equal to the NAV of the ICAV after deduction of liabilities. The share capital of the ICAV shall be divided into share capital of 5,000,000,000,000 Shares of variable par value and 2 Subscriber Shares of €1.00 each and shall at all times be equal to the value for the time being of the issued share capital of the ICAV.

Each of the Shares (with the exception of the Subscriber Shares) entitles the Shareholder to participate equally on a pro rata basis in the dividends and net assets of the relevant Sub-Fund attributable to the relevant class in respect of which they are issued save in the case of dividends declared prior to becoming a Shareholder.

The proceeds from the issue of Shares shall be applied in the books of the ICAV to the relevant Sub-Fund and shall be used on behalf of such Sub-Fund for the acquisition of assets in which a Sub-Fund may invest. The records and accounts of each Sub-Fund shall be maintained separately.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

8. Share Capital (continued)

The Directors reserve the right to re-designate any class of Shares from time to time, provided that Shareholders in that class shall first have been notified by the ICAV that the Shares will be re-designated and shall have been given the opportunity to have their Shares redeemed by the ICAV, except that this requirement shall not apply where the Directors re-designate Shares in issue in order to facilitate the creation of an additional class.

Each of the Shares entitles the holder to attend and vote at meetings of the ICAV and of the relevant Sub-Fund represented by those Shares. No class of Shares confers on the holder there of any preferential or pre-emptive rights or any rights to participate in the profits and dividends of any other class of Shares or any voting rights in relation to matters relating solely to any other class of Shares.

Any resolution to alter the class rights of the Shares requires the approval of three quarters of the holders of the Shares of the relevant class represented or present and voting at a general meeting duly convened in accordance with the instrument of incorporation of the ICAV (the "Instrument").

The Instrument empowers the Directors to issue fractional shares in the ICAV. Fractional shares will be issued where any part of the subscription monies for Shares represents less than the subscription price for one Share, provided however, that fractions shall not be less than 0.01 of a Share and shall not carry any voting rights at general meetings of the ICAV or a Sub-Fund and the NAV of any fractional share shall be the NAV per Share adjusted in proportion to the fraction.

The movement in the number of Shares is as follows for the financial year ended 31 December 2024:

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

10. Directors' Fees

The Directors are entitled to a fee by way of remuneration for their services at a rate to be determined from time to time by the Directors. The aggregate amount of Directors' remuneration in any one year shall not exceed €30,000 (excluding Value Added Tax, ("VAT"), if any).

All Directors will be entitled to reimbursement by the ICAV of expenses properly incurred in connection with the business of the ICAV or the discharge of their duties. Fees related to the ICAV are charged to the trading Sub-Funds. Mr. Jim Finn is the only Director of the ICAV in receipt of a director's fee. All other Directors of the ICAV have each waived their entitlement to receive a director's fee.

The directors' fees charged for the year amounted to €15,444 (31 December 2023: €16,741) in respect of the Sub-Funds presented. The directors' fees payable as at 31 December 2024 was €7,672 (31 December 2023: €21,641) in respect of the Sub-Funds presented.

11. Administration Fees and Depositary Fees

The Manager and the Administrator entered into an administration agreement in November 2023. The annual fee, payable out of the assets of the relevant Sub-Fund, is at a maximum rate of 0.032% (plus VAT) and is a combined fee which includes both the Administrator and the fee of the Depositary. The fee is presented on the Statement of Comprehensive Income as Administration fees and Depositary fees.

Prior to the updated agreement on 22 November 2023, the annual fee, payable out of the assets of the relevant Sub-Fund, was at a maximum rate of 0.05% (plus VAT) and was a combined fee which included both the Administrator and the fee of the Depositary. The fee is presented on the Statement of Comprehensive Income as Administration fees and Depositary fees.

The Administrator is also entitled to be reimbursed for all agreed registration and transaction fees and out of pocket expenses (plus VAT thereon) properly incurred by it in the performance of its duties and responsibilities under the Administration Agreement.

12. Auditors Remuneration

The remuneration to the statutory audit firm in respect of the services rendered to the ICAV in respect of the Sub-Funds presented for the financial year is as follows:

	31 December 2024	31 December 2023
	EUR	EUR
Audit fee*	335,439	252,374

* Audit fee amount shown is excluding VAT of 23%. There were no other fees paid to the statutory audit firm for tax or other assurance or non-audit work during the year.

13. Related and Connected Persons Transactions

Parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial or operational decisions.

The Directors of the ICAV are considered related parties. Details of Directors' fees charged during the year are disclosed in Note 10.

Mr. Fabio Melisso and Mr. Jim Firm (Independent director) are directors of the Manager and Mr. Ciaran Brady and Lorenzo Di Pietrantonio are employees of the Manager and will be considered to be interested in any agreement entered into by the ICAV with the Manager.

Sub-Funds of Core Series and FAM Evolution ICAV, which are also managed by the Manager, have made investments in the ICAV during the year. There were no other agreements entered into by the ICAV with either Core Series or FAM Evolution ICAV during the year.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

13. Related and Connected Persons Transactions (continued)

Connected Persons

In accordance with the requirements of the UCITS Regulations, all transactions carried out with the ICAV by the promoter, manager, trustee, investment adviser and associates/group companies ("connected persons") must be carried out as if negotiated at arm's length and be in the best interests of shareholders. The Directors are satisfied that there are arrangements (evidenced by written procedures) in place to ensure that the obligations set out in the UCITS Regulations are applied to all transactions with connected parties and transactions with connected parties entered into during the period complied with the obligations set out in the UCITS Regulations.

Management Fee

The Manager is entitled to receive out of the assets of the ICAV a management fee in respect of each class, accrued daily and payable monthly in arrears at such annual percentage rate of the NAV of each class as set out in the relevant Sub-Fund supplement. Any out of pocket expenses incurred by the Manager in carrying out its role on behalf of the ICAV and its Sub-Funds shall be for its own account. These disclosed fees are the maximum charges capped as per the prospectus and actual fees charged may be lower.

14. Financial Instruments and Associated Risks

Each Sub-Fund's investment activities expose them to the various types of risk which are associated with the financial instruments and markets in which it invests. The following information is not intended to be a comprehensive summary of all risks and investors should refer to the prospectus for a more detailed discussion of the risks inherent in investing in each Sub-Fund. The Sub-Funds have exposure to the following risks from financial instruments:

- Market risk;
- Liquidity risk;
- Credit risk; and
- Operational risk.

Risk Management framework

The Directors review quarterly risk and investment performance reports and presentations from the Manager, or where applicable the Manager's delegate Investment Managers (together "the Manager" only for the purpose of Note 14), covering the Sub-Funds' performance and risk profile during the financial year.

The Manager is responsible for ensuring that each Sub-Fund is managed within the terms of their investment guidelines and limits set out in the prospectus. The Directors review the Manager's reporting on the investment performance, product risk monitoring and oversight activities and the monitoring and oversight of regulatory and operational risk for the Sub-Funds.

The Manager has been given discretionary authority to manage the assets in line with the investment objectives of each Sub-Fund. Compliance with the target asset allocations and the composition of the portfolio are monitored by the Directors on a quarterly basis. In instances where the portfolio has diverged from target asset allocations, the Manager is obliged to take actions to rebalance the portfolio in line with the established targets, within prescribed time limits.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

14. Financial Instruments and Associated Risks (continued)

(a) Market Risk

Market risk arises mainly from uncertainty about future values of financial instruments influenced by price, interest rate and currency movements. It represents the potential loss each Sub-Fund may suffer through holding market positions in the face of market movements. The Manager's strategy for the management of market risk is driven by the Sub-Funds' investment objective as set out in Note 1. The ICAV's market risk is managed on a daily basis by the Manager. The Manager moderates this risk through a careful selection of securities and other financial instruments within specified limits. Details of the nature of the ICAV's investment portfolio at the Statement of Financial Position date are disclosed in the Schedule of Investments.

Value at Risk

The Manager uses three approaches to measure the Sub-Funds' global risk exposures. These are the commitment approach, Absolute Value at Risk ("VaR") and Relative VaR. These approaches are described in the prospectus and the approach each Sub-Fund uses is outlined in the table below.

Sub-Fund	Base Currency	Risk Approach	Risk Basis

Using the absolute VaR, the Manager estimates the potential loss in the Sub-Fund's portfolio over a set period at a certain confidence level, and is based on statistical analysis of historical price trends and volatilities. The VaR of the Sub-Funds shall be calculated daily and shall not exceed 13-20% per cent of the NAV of the Sub Fund, based on a 1 month holding period and a "one-tailed" 99 per cent confidence interval using a historical observation period of at least 1 year.

Using the relative VaR, the Manager estimates the potential loss in the Sub-Fund's portfolio over a set period at a certain confidence level, and based on statistical analysis of historical price trends and volatilities. The VaR of the Sub-Fund's portfolio is measured relative to the benchmark index which the Manager consider a comparable benchmark to the Sub-Fund's portfolio. In compliance with the UCITS Regulations, the relative VaR of the Sub Fund's portfolio shall not exceed twice the VaR of the index, as determined daily using a one-tailed confidence interval of 99%, a holding period of one month and a historical observation period of at least 1 year.

The 1 day VaR as of 31 December 2024 and 31 December 2023 based on a 99% confidence level is outlined in the table below:

Absolute VaR	31 December 2024	31 December 2023
Amundi Strategic Bond FAM Fund	0.45%	1.50%
Euro Short Duration Bond FAM Fund	0.21%	0.08%
Fineco AM European Corporate Bond Fund	0.43%	0.80%
M&G Optimal Income FAM Fund	1.32%	1.21%

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

14. Financial Instruments and Associated Risks (continued)

(a) Market Risk (continued)

Value at Risk (continued)

Some limitations of VaR analysis are:

- The models are based on historical data and cannot take account of the fact that future market price movements, correlations between markets and levels of market liquidity in conditions of market stress may bear no relation to historical patterns. As a consequence, VaR can be highly variable and a single date point analysis can be of limited value. VaR can fluctuate significantly over time;
- The composition of the ICAV can change significantly over a short period of time and, as such, the ICAV's risk profile including VaR may also change materially over a short time frame;
- The market price risk information is a relative estimate of risk rather than a precise and accurate number;
- The market price information represents a hypothetical outcome and is not intended to be predictive (in the case of probability-based methods, such as VaR, profits and losses are almost certain to exceed the reported amount with a frequency depending on the confidence interval chosen);
- FX hedging for the benefit of a particular class are not included;
- Future market conditions could vary significantly from those experienced in the past.

(i) Price Risk

Price risk is the risk that the value of an instrument will fluctuate as a result of changes in market prices, whether caused by factors specific to an individual investment, its issuer or all factors affecting all instruments traded in the market.

Any increase or decrease in the market price of investments would alter the ICAV's net asset value to the extent that it was invested at the time. The ICAV's investment portfolio complies with the investment restrictions as disclosed in its prospectus.

Exposure to price risk

Sensitivity

Sensitivity analysis for the Sub-Funds where the Manager do not use VAR approach is disclosed below.

Any increase or decrease in the market price of investments would alter the Sub-Fund's net asset value to the extent that it was invested at the time. The Sub-Fund's investment portfolio complies with the investment restrictions as disclosed in its prospectus. As at 31 December 2024 and 31 December 2023, if the fair value of investments to which the Sub-Funds were exposed had changed by 5% with all other variables held constant, this would have resulted in a change of net assets attributable to the shareholders by the amounts detailed below:

Sub-Fund		2024	2023
Fidelity Euro Bond FAM Fund	EUR	20,801,034	17,883,060
Fidelity Euro Short Term Bond FAM Fund	EUR	15,363,812	15,517,440
Fidelity Global Dividend FAM Fund	USD	35,580,225	25,890,201
Fidelity Focus Equity FAM Fund	USD	54,951,103	57,989,498

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

14. Financial Instruments and Associated Risks (continued)

(a) Market Risk (continued)

(i) Price Risk (continued)

Sensitivity

Management of price risk

The Manager chooses assets for investment and divestment by considering the potential contribution to portfolio volatility from the price risk of the asset considered in the transaction and in reference to the risk framework and the ICAV's prospectus, supplement and marketing materials. The Manager monitors that the exposures are within any tolerances set out in the agreed risk framework.

(ii) Interest Rate Risk

The ICAV's financial assets include direct interest bearing instruments. As a result the ICAV is exposed to fair value interest rate risk due to fluctuations in the prevailing levels of market interest rates. The ICAV's interest rate risk is managed on a daily basis by the Manager.

Cash and cash equivalents are not considered to be significantly exposed to fair value interest rate risk due to the short term nature of the instruments. Cash earns interest at a variable interest rate.

The interest bearing financial instruments significantly exposed to fair value interest rate risk are the bond investments. Consequently, movements in interest rates would have an inverse effect on the movement of the net asset value of the Sub-Funds.

The Manager chooses assets for investment and divestment by considering the potential contribution to portfolio volatility from the interest rate risk of the asset considered in the transaction and in reference to the risk framework and the ICAV's prospectus, supplement and marketing materials. The Risk Management department monitors that the exposures are within any tolerances set out in the agreed risk framework.

The following Sub-Funds held interest bearing instruments. Sensitivity is not presented here for the following Sub-Funds as VaR is presented for this Sub-Fund on Page 880 to 883.

(iii) Currency Risk

Foreign currency risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in foreign exchange rates.

Each Sub-Fund may invest in securities denominated in currencies other than their functional currency. Consequently, each Sub-Fund is exposed to risks that the exchange rate of their functional currency relative to other currencies may change in a manner which has an adverse effect on the value of the portion of each Sub-Fund's assets which are denominated in currencies other than their own currency.

The currency risk is in relation to the notional exposure on the forward currency contracts held by the Sub-Funds. These are detailed on the Schedule of Investments.

The Manager chooses assets for investment and divestment by considering the potential contribution to portfolio volatility from the currency risk of the asset considered in the transaction and in reference to the risk framework and the ICAV's prospectus, supplement and marketing materials. The Risk Management department monitors that the exposures are within any tolerances set out in the agreed risk framework.

Sensitivity is not presented here for the following Sub-Funds as VaR is presented for this Sub-Fund on Page 880 to 883.

- Amundi Emerging Markets Bond FAM Fund
- Amundi Strategic Bond FAM Fund
- Amundi European Equity Value FAM Fund
- Emerging Markets Bond Hard Currency FAM Fund
- Euro Bond FAM Fund
- Euro Corporate Fixed Income FAM Fund
- Euro Short Duration Bond FAM Fund

(b) Liquidity Risk

Liquidity risk is the risk that the Sub-Funds' may not be able to generate sufficient cash resources to settle their obligations in full as they fall due or can do so only on terms that are materially disadvantageous.

Each Sub-Fund's principal liquidity risks arise from the ability of investors to effect redemption requests and the liquidity of the underlying investments each Fund has invested in.

Each Sub-Fund's Unitholders may redeem their units on the close of any daily dealing deadline for cash equal to a proportionate share of each Sub-Fund's NAV, excluding any duties and charges where applicable. Each Sub-Fund is therefore potentially exposed to the liquidity risk of meeting the unitholders' redemptions and may need to sell assets at prevailing market prices to meet liquidity demands.

The Manager chooses assets for investment and divestment by considering the potential contribution to portfolio liquidity from the liquidity risk of the asset considered in the transaction and in reference to the risk framework and the ICAV's prospectus, supplement and marketing materials. The Risk Management department monitors that the exposures are within any tolerances set out in the agreed risk framework. The ICAV's overall liquidity risks are monitored on a quarterly basis by the Board of Directors.

All of the Sub-Funds assets and liabilities as of 31 December 2024 can be received or paid within or less than 1 month. While the accrued expenses can be paid within or less than 1 month not all are and some can be paid at a later date due to frequency or delay of invoicing. This delay can at times exceed 1 year. The following were the contractual maturities of financial liabilities at the reporting date. The amounts are gross and undiscounted.

(c) Credit Risk

Credit risk is the risk that a counterparty to a financial instrument will fail to discharge an obligation or commitment that it has entered into with the ICAV. The carrying amount of financial assets as per the Statement of Financial Position best represents the maximum credit risk exposure as at its date. Credit risk on transactions with brokers relates to transactions awaiting settlement. Risk relating to unsettled transactions is considered small due to the short settlement period involved and the high credit quality of the broker used. Substantially all of the assets of the ICAV are held by the Depositary. Bankruptcy or insolvency of the Depositary may cause the ICAV's rights with respect to securities or cash held by the Depositary to be delayed or limited. The ICAV manages its risk by monitoring the credit quality and financial position of the Depositary the ICAV uses. The credit rating for the Depositary as at 31 December 2024 was A+ (31 December 2023: A+) published by Standard & Poor's.

The cash and cash equivalents, balances due from brokers and balances due to brokers are held with bank and financial institution counterparties, which are rated BBB+ to AA (31 December 2023: BBB+ to AA), based on Standard & Poor's ratings. The derivatives are entered into with bank and financial institution counterparties, which are rated BBB+ to AA (31 December 2023: BBB+ to AA), based on Standard & Poor's ratings.

The Manager manages issuer risk through building diversified portfolios to limit exposure to any one issuer in accordance with the ICAV's investment objectives. The ICAV employs well known counterparties and ensures that concentration of investment in any one stock or counterparty is monitored against set limits.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

14. Financial Instruments and Associated Risks (continued)

(c) Credit Risk (continued)

Additionally, if required, the Manager will limit ownership of debt instruments to those instruments carrying a credit rating equal to or in excess of that provided for in the ICAV's investment objectives. The Manager monitors compliance with these restrictions on a daily basis.

All transactions in listed securities are settled/paid upon delivery using approved brokers. The risk of default is considered minimal as delivery of securities sold is only made once the broker has received payment. Payment is made on a purchase once the securities have been received by the broker. The credit ratings of all derivative counterparties are monitored regularly. The risk managers review counterparty credit ratings and approve the use of such counterparties.

The below table shows the breakdown by credit rating of the bonds in the Sub-Funds' portfolios:

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

14. Financial Instruments and Associated Risks (continued)

(c) Credit Risk (continued)

Offsetting and amounts subject to master netting arrangements

The ICAV has not offset any financial assets and financial liabilities in the statement of financial position. The disclosures set out in the tables below include financial assets and financial liabilities that are subject to an enforceable master netting or derivative clearing agreement that covers derivatives.

The International Swaps and Derivatives Association (“ISDA”) and similar master netting agreements do not meet the criteria for offsetting in the statement of financial position. This is because the ICAV does not have any currently legally enforceable right to offset recognised amounts, because the right to offset is enforceable only on the occurrence of future events such as a default of the ICAV or the counterparties or other credit events.

The collateral provided in respect of the above transactions is subject to the standard industry terms of ISDA’s Credit Support Annex. This means that securities received/given as collateral can be pledged or sold during the term of the transaction but have to be returned on maturity of the transaction. The terms also give each counterparty the right to terminate the related transactions on the counterparty’s failure to post collateral.

The following tables disclose the derivative financial assets and liabilities subject to enforceable netting and similar arrangements, presented on an aggregate basis across multiple counterparties. Counterparties are analysed on an individual basis, offsetting assets and liabilities with individual counterparties where appropriate to do so while incorporating the collateral held by or posted by the Sub-Funds with respect to the open positions. The following tables present the total net exposure to counterparties with respect to derivative assets and liabilities on a Sub-Fund by Sub-Fund basis.

Fidelity Euro Bond FAM Fund

Financial assets subject to offsetting, enforceable master netting arrangements and similar agreements:

	Gross amounts of recognised financial assets	Gross amounts of recognised financial liabilities set-off in the statement of financial position	Net amounts of financial assets presented in the statement of financial position	Related amounts not set-off in the statement of financial position		Net amount

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

14. Financial Instruments and Associated Risks (continued)

(c) Credit Risk (continued)

Each Sub-Fund's engagement in securities lending activities expose the Sub-Fund to counterparty credit risk. The maximum exposure of each Fund is equal to the value of the securities loaned.

All securities lending transactions entered into by each Sub-Fund are subject to a written legal agreement between each Sub-Fund and the Manager and separately between the approved borrowing counterparty. Collateral received in exchange for securities lent is transferred under a title transfer arrangement and is delivered to and held in an account with a tri-party collateral manager in the name of the Trustee on behalf of each Sub-Fund. Collateral received is segregated from the assets belonging to each Sub-Fund's Trustee or the securities lending agent.

The collateral is registered and held in the name of Trustee on behalf of each Sub-Fund with the Depositary depending on the type of collateral the counterparty has to give in order to cover the required value of exposure. The collateral provided by these counterparties consists of shares admitted to dealing on a regulated market.

To mitigate this risk, each Sub-Fund receives either cash or securities as collateral equal to a certain percentage in excess of the fair value of the securities loaned. The Investment Manager monitors the fair value of the securities loaned and additional collateral is obtained, if necessary.

As at 31 December 2024 all collateral received consists of securities admitted to or dealt on a regulated market.

Each Sub-Fund also benefits from a borrower default indemnity provided by the Manager. The indemnity allows for full replacement of securities lent. The Manager bears the cost of indemnification against borrower default.

(d) Operational Risk

Operational risk is the risk of direct or indirect loss arising from a wide variety of causes associated with the processes, technology and infrastructure supporting the Sub-Fund activities with financial instruments, either internally within the Sub-Fund or externally at the Sub-Fund's service providers, and from external factors other than credit, market and liquidity risks such as those arising from legal and regulatory requirements and generally accepted standards of investment management behaviour.

The Sub-Funds' objectives are to manage operational risk so as to balance the limiting of financial losses and damage to its reputation with achieving its investment objective of generating returns to investors.

The primary responsibility for the development and implementation of controls over operational risk rests with the Directors. This responsibility is supported by the development of overall standards for the management of operational risk, which encompasses the controls and processes at the service providers and the establishment of service levels with the service providers, in the following areas:

- Documentation of controls and procedures;
- Requirements for:
 - Appropriate segregation of duties between various functions, roles and responsibilities;
 - Reconciliation and monitoring of transactions; and
 - Periodic assessment of operational risk faced.
- The adequacy of controls and procedures to address the risks identified;
- Compliance with regulatory and other legal requirements;
- Development of contingency plans;
- Training and professional development;
- Ethical and business standards; and
- Risk mitigation, including insurance if this is effective.

The Directors' assessment of the adequacy of the controls and processes in place at the service providers with respect to operational risk is carried out via regular discussions with the service providers and a review of the service providers' Service Organisation Controls reports on internal controls, if any are available.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

15. Fair Value of Financial Instruments

Each Sub-Fund classifies financial instruments measured at fair value using a fair value hierarchy. The fair value hierarchy has the following categories:

- Level 1: The unadjusted quoted price in an active market for identical assets or liabilities that the entity can access at the measurement date;
- Level 2: Inputs other than quoted prices included within Level 1 that are observable (i.e. developed using market data) for the asset or liability, either directly or indirectly. This category includes instruments valued using: quoted prices in active markets for similar instruments; quoted prices for similar instruments in markets that are considered less than active; or other valuation techniques where all significant inputs are directly or indirectly observable from market data; and
- Level 3: Inputs are unobservable (i.e. for which market data is unavailable) for the asset or liability. This category includes all instruments where the valuation techniques used include inputs not based on market data and these inputs could have a significant impact on the instrument's valuation. This category also includes instruments that are valued based on quoted prices for similar instruments where significant entity determined adjustments or assumptions are required to reflect differences between the instruments and instruments for which there is no active market.

The Administrator will, where possible, obtain asset pricing or valuation information from various sources and apply those valuations in line with agreed price sources and validation procedures to the assets held by the Sub-Funds for the purposes of calculating the Sub-Funds' NAVs. The Administrator is required to ensure that the valuation methodology applied to the Sub-Funds' assets is in compliance with Valuation Policy and the valuation rules as set out in the relevant Sub-Funds' constitutional documents and the Prospectus.

For this purpose, the significance of an input is assessed against the fair value measurement in its entirety. The ICAV recognises transfers between levels of the fair value hierarchy as at the end of the reporting period during which the change has occurred. There were transfers between levels for the year ended 31 December 2024 and year ended 31 December 2023.

The determination of what constitutes 'observable' requires significant judgement. The Directors consider observable data to be that market data that is readily available, regularly distributed or updated, reliable, verifiable, not proprietary, and provided by independent sources that are actively involved in the relevant market.

The following tables provide an analysis of each Sub-Fund's financial assets and financial liabilities measured at fair value as at 31 December 2024.

Cash and cash equivalents, receivable for securities, subscriptions receivable, due from brokers, interest and other assets, payable for securities purchased, management fees payable, redemptions payable, dividend payable, due to shareholders, due to brokers, accrued expenses and net assets attributable to holders of redeemable participating shares are not included in the tables below. Their carrying amount is a reasonable approximation of fair value.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

17. Efficient Portfolio Management

The ICAV may employ investment techniques and instruments for efficient portfolio management of the assets of the ICAV and, in particular, the ICAV may, for the purpose of hedging (whether against currency, exchange or interest rate risks or otherwise), or for direct investment purposes, purchase or sell put options and call options, spot contracts, forward contracts, futures contracts and other derivative instruments and may also enter into securities lending transactions and sale and repurchase agreement.

Subject to the conditions and within the limits otherwise stated in the investment objective and policies of a Sub-Fund, the Manager may employ investment techniques and instruments such as futures, options, forward foreign currency contracts and other derivatives for investment purposes, hedging or efficient portfolio management.

Please refer to the Prospectus for more details regarding efficient portfolio management.

18. Cross Liability

Liabilities incurred by a Sub-Fund of the ICAV may be discharged solely out of the assets of that Sub-Fund such that creditors of Sub-Funds will not have recourse to the assets of the other Sub-Funds of the ICAV to settle any liabilities incurred.

19. Taxation

Under current law and practice, the ICAV qualifies as an investment undertaking as defined in Section 739B of the Taxes Consolidation Act, 1997, as amended. It is not chargeable to Irish tax on its income or capital gains. However, the ICAV is obliged to apply a withholding tax on any distribution payments to Irish residents or ordinarily resident shareholders on any encashment, redemption or transfer of units by an Irish resident or ordinarily resident shareholder, unless the shareholder is exempted under Section 739D of the Taxes Consolidation Act, 1997, as amended. Shareholders who complete a declaration confirming that they are not Irish residents are not liable to Irish tax on the income or gains arising from their investment in the ICAV and no withholding tax will be deducted on any payments made to them. Where the ICAV has a concession from the Revenue Commissioners it may be possible to obtain an exemption from the requirement to have a valid non-resident declaration in place.

If the ICAV fails to deduct the tax or fails to collect the appropriate signed declaration from any non-resident or exempted shareholders, the ICAV will remain liable for the tax. In these circumstances, the ICAV would seek to recover the tax paid from the relevant shareholder.

Capital gains and interest received by the ICAV may be subject to withholding taxes imposed by the country of origin and such taxes may not be recoverable by the ICAV or its shareholders.

* These Financial Statements exclude the Sub-Funds marked above which are presented in a separate sets of Financial Statements, refer to Note 1.

Effective from 30 December 2024, the following Sub-Funds have updated the supplements as the Sub-Fund investment manager's intention is to pursue a new investment objective with the aim to provide dividends at certain dates, while protecting the NAV of EUR 100 at the new defined maturity intended to be 3 years from the expiration of the previous term. As a result, the following Sub-Funds have updated the supplement with new maturity date and has been renamed to the following:

Previous Name	New Fund Name post maturity	New Maturity Date
Smart Global Defence FAM Fund 2024	Smart Global Defence FAM Fund 2029 Roll*	12 January 2029
Smart Global Defence FAM Fund 2024 USD	Smart Global Defence FAM Fund 2029 USD Roll*	12 January 2029

* These Financial Statements exclude the Funds marked above which are presented in a separate sets of Financial Statements, refer to Note 1.

The following Sub-Funds of the ICAV were renamed in 2024 as disclosed below:

Current Sub-Fund Name	Old Sub-Fund Name	Date of Change
Fidelity Focus Equity FAM Fund	Fidelity World FAM Fund	5 April 2024

On 5 April 2024, the minimum sustainable investment threshold of Fidelity Focus FAM Fund decreased from 75% to 50%. In line with this change, the minimum allocation of socially sustainable investments with a social objective changed from 20% to 15%. The name of the sub-fund was also changed from Fidelity World FAM Fund to Fidelity Focus Equity FAM Fund.

On 9 May 2024, Flexible Income FAM Fund was reclassified from an Article 6 to an Article 8 fund pursuant to SFDR. Other amendments were also made to the sub-fund's supplement which included changing from the relative value-at-risk (VaR) approach to the absolute VaR approach and decreasing the expected level of gross leverage from 500% to 100% of the sub-fund's Net Asset Value. Additionally, interest rate swaps were also included as additional instruments that may be used by the sub-fund.

On 18 September 2024, the Manager appointed M&G Investment Management Limited to act as a non-discretionary Investment Advisor to Global Credit Coupon Fineco AM Fund.

On 1 October 2024, Allianz Global Investors GmbH was no longer appointed as the non-discretionary Investment Advisor to Fineco AM Global Equities Income Fund, Fineco AM Global Premium Equities Fund and Fineco AM Euro Credit Bond

On 31 October 2024, the reference index of Fineco AM MSCI World Semiconductors and Semiconductor Equipment 20% Capped UCITS ETF was changed from MSCI World Semiconductors and Semiconductor Equipment Index to a capped version with a 20% limit at issuer level, namely MSCI World Semiconductors and Semiconductor Equipment

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

20. Events During the Financial Year (continued)

20% Capped Index. The name of the sub-fund was also amended to reflect this change of index.

On 2 September 2024, the performance benchmarks of Fineco AM Global Equities Income Fund and Fineco AM Global Premium Equities Fund were changed from MSCI ACWI only to a benchmark composed of a 50:50 blend with an additional MSCI index to reflect the style tilt of the particular sub-fund.

On 18 December 2024, the Supplements of Diversity and Inclusion FAM Fund, Global Sustain Paris Aligned FAM Fund and Global Listed Infrastructure FAM Fund were updated to change the Valuation Point from 11.59pm (Irish time) to 12.00pm (Irish time).

The maturity date was extended by 4 years from 30 December 2024 for Smart Global Defence FAM Fund 2024 USD and 31 December 2024 for Smart Global Defence FAM Fund 2024 to 12 January 2029. In line with this change, the names of the sub-funds were also amended from Smart Global Defence FAM Fund 2024 to Smart Global Defence FAM Fund 2029 Roll and from Smart Global Defence FAM Fund 2024 USD to Smart Global Defence FAM Fund 2029 USD Roll.

The Dealing Deadline which was due to occur on 2 January 2025 of the following funds was cancelled in light of a public holiday over the Christmas period. There were Dealing Days on 27 December 2024 and 8 January 2025 for those funds and in line with Central Bank requirements.

Geopolitical Conflicts

The recent outbreak of geopolitical conflicts all over the world can have an impact on the global economies. The Directors are carefully monitoring the situation as well as its potential impacts on the ICAV. The ICAV is fully capable of continuing its usual operations.

There were no other significant events during the financial year.

21. Events Post Financial Year End

Effective 2nd April 2025, Fiona Mulhall was appointed as a Director of the ICAV

The following Sub-Funds launched after the financial year:

Smart Defence Multi Strategy 2030 Fineco AM Fund IV	12 February 2025
Smart Global Defence Callable After 4 Years Fineco AM Fund	26 February 2025
Fineco AM MSCI World High Dividend Yield UCITS ETF	03 March 2025
Smart Global Defence Callable After 4 Years Fineco AM Fund I	26 March 2025
Smart Equity Defence 95 Fineco AM Fund	26 March 2025
Fineco AM Dynamically Hedged US Equities UCITS ETF	01 April 2025
Smart Global Defence Callable After 2 Years Fineco AM Fund II	16 April 2025

There has been an escalation in geopolitical tensions and global trade uncertainty, contributing to increased market volatility and a more cautious economic outlook in certain regions. While the situation remains fluid, the Directors of the ICAV are actively monitoring developments and assessing any potential implications for the ICAV's investments and operations. The ICAV remains well-positioned to continue its usual operations.

There are no other events after the year end that had a material effect on the Financial Statements.

FAM Series UCITS ICAV

Notes to the Financial Statements for the financial year ended 31 December 2024 (continued)

22. Soft Commission Arrangements

The Manager or the relevant Investment Managers of the Sub-Funds may effect transactions that will from time to time provide or procure the Manager or the Investment Managers goods and services and other benefits such as research and advisory services provided that the nature of which is such that their provision shall assist in the provision of investment services to the ICAV as a whole and which no direct payment is made but instead the Manager undertakes to place business with that party. In any event it is agreed that the execution of transactions will be on the basis of best execution standards and brokerage rates will not be in excess of customary institutional rates. Each Investment Manager shall also comply with additional regulations governing soft commission practices including where relevant requirements under MiFID II, which governs the extent to which commissions, inducements, research reports or other non-minor monetary benefits may be paid or received from brokers.

For the year ended 31 December 2024, the following Investment Manager has entered into a soft commission arrangement for research purposes as permitted by applicable regulation on behalf of the Sub-Fund with broker counterparties.

Investment Manager	Sub-Fund
Invesco Advisers, Inc	US Equity Value FAM Fund

For the year ended 31 December 2023, the following Investment Managers have entered into soft commission arrangements for research purposes as permitted by applicable regulation on behalf of the Sub-Funds with broker counterparties.

Investment Manager	Sub-Fund
Invesco Advisers, Inc	US Equity Value FAM Fund
Infusive Asset Management Inc.	Infusive Consumer Alpha Global Leaders FAM Fund

The total aggregate amount of soft commissions is USD 232,975 for the Financial Statements year ended 31 December 2024 (31 December 2023: USD 406,803).

There were no other soft commission arrangements for the financial year ended 31 December 2024 and year ended 31 December 2023.

23. Reconciliation to Published NAV

As at 31 December 2024 and 31 December 2023, the NAV stated in these Financial Statements differ from the published NAV for certain Sub-Funds. The differences are due to late trades and Investor dealing booked after the NAV was finalised as well as for pricing updates on US securities. This difference was not material on any Sub-Fund and therefore the NAV was not republished. The materiality threshold for these adjustments changed from the prior year from 50bps to 5bps for the current year.

(i) Reconciliation of Net Asset Value

The following tables show the reconciliation between the NAV as per Financial Statements, Published NAV, and impact in basis points ("BPS"):

Portfolio changes for the financial year ended 31 December 2024 (Unaudited)

Fidelity Euro Bond FAM Fund (continued)

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

Portfolio changes for the financial year ended 31 December 2024 (Unaudited)

M&G North American Value FAM Fund (continued)

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

Fineco AM European Corporate Bond Fund (continued)

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

In accordance with the UCITS Regulations the annual report documents material changes that have occurred in the disposition of the assets of the Sub-Funds during the year. A material change is defined as aggregate purchases of a security exceeding 1 per cent of the total value of purchases for the year or aggregate disposals greater than 1 per cent of the total value of sales. If there were fewer than 20 purchases that met the material changes definition, the Sub-Funds shall disclose those purchases and such number of the next largest purchases so that at least 20 purchases are disclosed. If there are fewer than 20 sales that met the material changes definition, the Sub-Funds shall disclose those sales and such number of the next largest sales so that at least 20 sales are disclosed.

Value at Risk Approach

Value at Risk (“VaR”) is a statistical risk measure that estimates the potential loss from adverse market movements in an ordinary market environment.

Please refer to the financial risks Note 14 to the Financial Statements for further details on the measure of VaR.

The Directors use Relative VaR to monitor and manage the global exposure of some of the Funds and Absolute VaR for others as set out below. For Relative VaR, the VaR of the respective Fund’s portfolio will not exceed twice the VaR of the reference portfolio. For Absolute VaR, the monthly VaR will not exceed 20% of the Fund’s NAV. Where a VaR calculation is performed using a horizon other than the one-month regulatory limit, this 20% limit shall be rescaled to reflect the appropriate risk horizon period as directed by the relevant regulatory guidelines. Utilisation refers to the level of risk taken in this context.

The table below details the highest, lowest and average utilisation of the VaR limit, expressed as a percentage of the respective Absolute or Relative VaR regulatory limit.

Sub-Fund	Global Exposure Type	Risk Model	Reference Risk Portfolio	Highest utilisation of the VaR limit %	Lowest utilisation of the VaR limit %	Average utilisation of the VaR limit %
Amundi Emerging Markets Bond FAM Fund	Relative	VAR	95% JP Morgan EMBI Global Diversified Index and 5.00% JMP 1M Cash Index	49.2%	33.1%	41.2%

LEVERAGE

The use of FDIs may expose a Fund to a higher degree of risk. In particular, FDI contracts can be highly volatile, and the amount of initial margin is generally small relative to the size of the contract so that transactions may be leveraged in terms of market exposure. A relatively small market movement may have a potentially larger impact on FDIs than on standard bonds or equities.

Leveraged FDI positions can therefore increase a Fund's volatility. Disclosed in the table below is the level of leverage employed by each relevant Fund during the financial year ended 31 December 2024.

Sub-Fund	% Average Leverage Employed

UCITS V Remuneration Disclosure

Fineco Asset Management Designated Activity Company (the “Management Company”), the Management Company of FAM Series UCITS ICAV acts as the Management Company for two other umbrella UCITS.

The Management Company follows a remuneration policy which complies with the requirements of the UCITS regulation in Ireland and in particular the S.I. 143/2016.

The remuneration policy and practices objectives are consistent with and promote sound and effective risk management, aligning remuneration with long-term performance and risks in order to avoid conflicts of interest. Fixed remuneration components are linked to the roles covered, the professional services rendered and the scope of responsibilities, reflecting the level of the talent, skills and competencies, market pay levels, experience and skills required for each position, as well as the level of excellence demonstrated. Variable remuneration is designed to promote a sustainable long-term development of the Management Company and a solid and effective risk management system. Variable remuneration awards consider the performance of the employee, her/his business unit and the Management Company as a whole, and it is based on both financial and non-financial criteria, among other criteria.

The total remuneration paid by the Management Company to its staff for the financial year end 31 December 2024 is as follows:

Financial Year End 31 December 2024

	<u>Fixed</u>	<u>Variable</u>	<u>Total</u>
Employees	9,077,800	2,044,175	11,121,975
Executive Directors	1,053,967	1,268,549	2,322,516
Non-Executive Directors	97,500	-	97,500

The ICAV represents as at 31 December 2024 around 69% of the Total AUM of the Management Company.

The remuneration policy is reviewed at least annually.

Securities Financing Transaction Regulations Disclosure (SFTR) (continued)

Securities lending (continued)

All securities lending transactions entered into by each Sub-Fund are subject to a written legal agreement between each Sub-Fund and the securities lending agent, the Manager, a related party to the Entity, and separately between the securities lending agent and the approved borrowing counterparty. Collateral received in exchange for securities lent is transferred under a title transfer arrangement. Collateral received is delivered to and held in an account in the name of the Trustee on behalf of each Fund. Collateral received is segregated from the assets belonging to each Sub-Fund's Trustee or the securities lending agent.

All OTC FDIs and total return swaps are entered into by each Sub-Fund under an International Swaps and Derivatives Associations, Inc. Master Agreement ("ISDA Master Agreement") or similar agreement. An ISDA Master Agreement is a bilateral agreement between the Fund and a counterparty that governs OTC FDIs (including total return swaps) entered into by the parties. The parties' exposures under the ISDA Master Agreement are netted and collateralised together, therefore any collateral disclosures provided are in respect of all OTC FDIs entered into by a Sub-Fund under the ISDA Master Agreement, not just total return swaps.

All collateral received/posted by each Sub-Fund under the ISDA Master Agreement is transferred bilaterally under a title transfer arrangement.

The following table details the value of securities on loan as a proportion of each Sub-Fund's total lendable assets and NAV and the value of total return swaps as a proportion of the Sub-Fund's NAV, as at 31 December 2024 and the income/returns earned for the year ended 31 December 2024. Total lendable assets represent the aggregate value of assets forming part of a Sub-Fund's securities lending programme. This excludes any assets held by the Sub-Funds that are not considered lendable due to any market, regulatory, investment or other restriction. The value of total return swaps is based on the underlying exposure value on a gross absolute basis.

Sub-Fund	Currency	% of total lendable assets	% of max lendable limits	% of NAV	Total returns earned – Total gross revenue from January 2024 to December 2024

The total income earned from securities lending transactions is split between the relevant Sub-Fund and the Securities Lending Agent. Each Sub-Fund receives at least 65% while securities lending agent receives up to 35% of such income with all operational costs borne out of the securities lending agent's share.

All returns and costs from total return swaps will accrue to each Sub-Fund and are not subject to any returns or costs sharing arrangements with the Sub-Fund's Manager or any other third parties.

Sustainable Finance Disclosure Regulation (SFDR)

Environmental, social and governance ("ESG") Integration describes the mechanism by which the Manager, acting through the Investment Manager as its delegate, when applicable, may integrate sustainability risks into investment decision-making, which may, where relevant, require the Investment Manager to assess the potential sustainability risks associated with the purchase of investments.

Sustainability Risk means an ESG event or condition that, if it occurs, could potentially or actually cause a material negative impact on the value of a Sub-Fund's investment. Sustainability risks can either represent a risk of their own or have an impact on other risks which they may contribute significantly to such as market risks, operational risks, liquidity risks or counterparty risks.

The ICAV reserves the right to reassess the classification of its Sub-Funds under Regulation (EU) 2019/2088 ("SFDR") at any time and shall keep this classification under review in case of issuing of new or amendments made to the applicable Regulatory Technical Standards ("RTS") to SFDR or any other relevant pieces of legislation or regulation or regulatory guidance impacting such a classification. RTS are standards for implementation of the provisions set forth in SFDR issued by the European Supervisory Authorities ("ESAs") to market operators.

If the ICAV determines at any future point that a Sub-Fund does not meet the criteria to qualify as an Art. 8 or Art. 9 SFDR fund, the relevant disclosure pertaining to such a Sub-Fund shall be updated or withdrawn as appropriate, in accordance with the revised classification of the Sub-Fund.

The following Sub-Funds are classified as Article 6 funds under the Sustainable Finance Disclosure Regulation ("SFDR"):

Sub-Fund	SFDR Classification	Investment Manager
US Equity Value FAM Fund	Article 6	Invesco Advisers, Inc.
Amundi Emerging Markets Bond FAM Fund	Article 6	Amundi Ireland Limited
Emerging Markets Bond Hard Currency FAM Fund	Article 6	Amundi (UK) Limited
Euro Short Duration Bond FAM Fund	Article 6	Schroder Investment Management Limited
Flexible Equity Strategy FAM Fund	Article 6	Vontobel Asset Management AG
Euro High Yield Bond FAM Fund	Article 6	FIL Pensions Management AG
European High Yield Bond FAM Fund	Article 6	Vontobel Asset Management AG
Emerging Markets Debt FAM Fund	Article 6	M&G Investment Management Limited
Vontobel Emerging Markets Debt FAM Fund	Article 6	Vontobel Asset Management AG
Infusive Consumer Alpha Global Leaders FAM Fund	Article 6	Infusive Asset Management Inc.
Morgan Stanley US Advantage FAM Fund	Article 6	MSIM Fund Management (Ireland) Limited
Banor Club Fineco AM Fund	Article 6	Banor Capital Limited

The investments underlying the above-named Sub-Funds do not take into account the EU criteria for environmentally sustainable economic activities. The classification of the abovenamed Sub-Funds as Article 6 SFDR funds means that the Sub-Funds do not promote environmental or social characteristics in a way that meet the specific criteria contained in Article 8 of SFDR or have Sustainable Investment as its objective in a way that meet the specific criteria contained in Article 9 of SFDR.

When assessing the Sustainability Risks associated with the Fund's underlying investments, the Manager (or the Investment Manager, as the case) is attempting to understand the likelihood of the risk that the value of such underlying investments could be materially negatively impacted by an environmental, social or governance event or condition. While the Manager (or the Investment Manager, as the case) integrates Sustainability Risk into the Sub-Fund's investment decision making process, the output of such Sustainability Risk integration is not the determining factor, nor potentially even among the most prominent factors, considered in the investment decisions in respect of the assets which the Sub-Fund may buy and/or hold. Accordingly, the Manager (or the Investment Manager, as the case) may buy and/or hold assets which may expose the Sub-Fund to high or low levels of Sustainability Risk. For further information on how Sustainability Risks are integrated, please refer to section "SFDR disclosure" under each Sub-Fund's supplement.

SFDR and Regulation (EU) 2020/852 of the European Parliament and of the Council of 18 June 2020 on the establishment of a framework to facilitate sustainable investment, and amending SFDR (the "Taxonomy Regulation") require certain information to be disclosed in the audited financial statements where a Sub-Fund is classified under Article 8 or Article 9 of SFDR. This information is required to be presented in the form of the template set out in the annexes to Commission Delegated Regulation (EU) 2023/363 of 31 October 2022 amending and correcting the regulatory technical standards laid down in Delegated Regulation (EU) 2022/1288, which supplement SFDR. Further information on the environmental and/or social characteristics promoted by the Sub-Funds during the year can therefore be found in the annexes to these financial statements (the "SFDR Annexes").

FAM Series UCITS ICAV

Unaudited Section (continued)

Sustainable Finance Disclosure Regulation (SFDR) (continued)

The data used to complete the disclosures set out in the SFDR Annexes for the Sub-Funds is provided:

- For internally managed Sub-Funds other than Funds of Funds: by relevant third-party sources;
- For Sub-Funds managed by Delegate Investment Managers: by the relevant Delegate Investment Managers.
- The data used is the data available as at the year-end considered by the financial statements (December 2023) on backward-looking analysis.

The analysis is dependent on the underlying investee entities disclosing relevant data and the availability of this data can be limited. Data may also be incomplete, inaccurate and/or contain errors that may not be detected by the Manager. It has been observed that the availability and accuracy of data, from the relevant third party data providers and underlying investee entities, continues to be challenging in some respects. Additionally, there may be further regulatory guidance of relevance to the content of the disclosures that is still to be issued. The disclosures included in the SFDR Annexes should consequently be read and understood in light of these continuing challenges. With the assistance of the Manager and, where applicable for the relevant Sub-Fund, the Investment Manager, the Board of the ICAV continues to monitor the ongoing development and evolution of sustainability-related regulation, including SFDR and the Taxonomy Regulation, and associated guidance and the availability of relevant third party and investee entities' data in this regard.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Fidelity EURO Bond FAM Fund

Legal entity identifier: 635400QQSTLMRC4MMX19

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes**

☐ It made **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ ☒ **No**

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 38.42% of sustainable investments

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favourable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The Fund partially made sustainable investments.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

● *How did the sustainability indicators perform?*

The performance of the sustainability indicators the Fund used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of December 2024 was:

1. 93.07% of the Fund was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 38.42% of the Fund was invested in sustainable investments.
4. 2.32% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy).
5. 20.13% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 15.97% of the Fund invested in sustainable investments with a social objective.

● *...and compared to previous periods?*

During the prior reference period the mandate was invested

1. 90% of the Fund was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 19% of the Fund was invested in sustainable investments.
4. 2.69% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy).
5. 8% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 8% of the Fund invested in sustainable investments with a social objective.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While it did not have as its objective a sustainable investment, it had a proportion of 38.42% of sustainable investments. The sustainable investments had an environmental and social objective. The Fund determined a sustainable investment as follows:

- a) issuers that undertake economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with

EU Taxonomy. This contributed towards the climate change mitigation environmental EU Taxonomy objective; or

(b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or

(c) issuers which set a decarbonization target consistent with a 1.5 degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet’s oceans and forests. For further details see the UN website . Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This Included: Norms-based screens - the screening out of securities identified under Fidelity’s existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a ‘Very Severe’ controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators were used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available). Issuers with a low overall score were ineligible to be ‘sustainable investments’ unless Fidelity’s fundamental research determined that the issuer was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Norms-based screens were applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not considered sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

1. Due Diligence - analysis of whether principle adverse impacts were material and negative.
2. ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
3. Exclusions - Fidelity adopted a principles-based approach to ESG matters and as part of this we place companies which they regard as unsuitable investments on an Exclusion List, including but not limited to the following; a firm-wide exclusions list, that includes biological weapons, chemical weapons, the use of stock piling, production and transfer of anti-personnel mines, the treaty of non-proliferation of nuclear weapons and guidance from the UN, World Bank and other global authorities upholding ESG principles.
4. Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

5. Voting - Fidelity's voting policy included explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.
6. Quarterly reviews monitoring of principal adverse impacts through the Fund's quarterly review process.

Fidelity takes into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators are subject to data availability and may evolve with improving data quality and availability. The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2024 - 31/12/2024

Largest investments	Sector	% Assets	Country

The following data has been compiled as of December 31st 2024. Classification of securities including Sector and Country are determined as at the last day of the reference period. (December 31st 2024) This data includes all securities, excluding derivatives.

Asset allocation describes the share of investments in specific assets.

What was the proportion of sustainability-related investments?

The Fund invested 38.42% in sustainable investments for the period in review.

What was the asset allocation?

(#1 aligned with E/S characteristics) The Fund invested in:

1. 93.07% of its assets in securities of issuers with favourable ESG characteristics;
2. 38.42% in sustainable investments (#1A sustainable) of which 2.32% have an environmental objective (which is aligned with the EU Taxonomy), 20.13% have an environmental objective (which is not aligned with the EU Taxonomy), 15.97% have a social objective.

(#1B Other E/S characteristics) Includes securities of issuers with favourable ESG characteristics but are not sustainable investments.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Treasury	Treasury	34.0%
Quasi / Sov / Supra / Agency	Agencies	2.1%
	Local Authorities	1.0%
Banks & Brokers	Banking	8.7%
Insurance	Insurance: Life	5.8%
Property	Property	1.0%
Capital Goods	Building Materials	3.7%
	Diversified Manufacturing	1.9%
Consumer Cyclical	Automotive	4.4%
	Restaurants	2.1%
Consumer Non Cyclical	Consumer Products	2.1%
	Healthcare	3.6%
	Pharmaceuticals	9.5%
Energy	Energy: Integrated	5.3%
Transportation	Transportation Services	1.9%
Technology	Technology	2.3%
Utility	Utility: Electric	6.1%
	Utility: Other	1.6%
	Utility: Natural Gas	1.0%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund invested 2.32% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas ☒ In nuclear energy ☒

No ☐

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The following data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. The EU taxonomy figures disclosed may differ due to differences in the calculation methodology applied.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.01% for transitional activities and 1.2% for enabling activities, measured by Turnover.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 3.3% based on Turnover, 5.5% based on CapEx and 4.1% based on OpEx.

The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 4.6% based on Turnover, 7.6% based on CapEx and 5.7% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund invested 20.13% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund invested 15.97% in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period, and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilised their spheres of influence on companies via active engagement and stewardship activities.

How did this financial product perform compared to the reference benchmark?

Not applicable

- *How does the reference benchmark differ from a broad market index?*

Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

- *How did this financial product perform compared with the reference benchmark?*

Not applicable

- *How did this financial product perform compared with the broad market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Fidelity Euro Short Term Bond FAM Fund Legal entity identifier: 635400PB1H3MA6O1JH42

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 28.44% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favorable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The Fund partially made sustainable investments.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

● *How did the sustainability indicators perform?*

The performance of the sustainability indicators the Fund used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of December 2024 was:

1. 85.01% of the Fund was invested in securities of issuers with favorable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 28.44% of the Fund was invested in sustainable investments.
4. 1% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy).
5. 19.3% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 8.14% of the Fund invested in sustainable investments with a social objective.

● *...and compared to previous periods?*

During the prior reference period the Fund was invested

1. 89% of the Fund was invested in securities of issuers with favorable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 19% of the Fund was invested in sustainable investments.
4. 1.52% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy).
5. 14% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 3% of the Fund invested in sustainable investments with a social objective.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

While it did not have as its objective a sustainable investment, it had a proportion of 28.44% of sustainable investments. The sustainable investments had an environmental and social objective. The Fund determined a sustainable investment as follows:

- a) issuers that undertake economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy. This contributed towards the climate change mitigation environmental EU Taxonomy objective; or
- (b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or
- (c) issuers which set a decarbonization target consistent with a 1.5-degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

The SDGs are a series of goals published by the United Nations which recognize that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This Included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labor rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators were used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

— — — ***How were the indicators for adverse impacts on sustainability factors taken into account?***

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

EU SFDR Regulatory Technical Standards were taken into account (where data was available). Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Norms-based screens were applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labor, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labor Organization (ILO) Conventions, were not considered sustainable investments.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

1. Due Diligence - analysis of whether principle adverse impacts were material and negative.
2. ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
3. Exclusions - Fidelity adopted a principles-based approach to ESG matters and as part of this they place companies which we regard as unsuitable investments on an Exclusion List, including but not limited to the following; a firm-wide exclusions list, that includes biological weapons, chemical weapons, the use of stock

piling, production and transfer of anti-personnel mines, the treaty of non-proliferation of nuclear weapons and guidance from the UN, World Bank and other global authorities upholding ESG principles.

4. Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e., Climate Action 100+, Investors Against Slavery and Trafficking APAC).

5. Voting - Fidelity's voting policy included explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.

6. Quarterly reviews monitoring of principal adverse impacts through the Fund's quarterly review process.

Fidelity takes into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators are subject to data availability and may evolve with improving data quality and availability. The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

The following data has been compiled as of December 31st 2024. Classification of securities including Sector and Country are determined as at the last day of the reference period. (December 31st 2024) This data includes all securities, excluding derivatives.

What was the proportion of sustainability-related investments?

The Fund invested 28.44% in sustainable investments for the period in review

Asset allocation

describes the share of investments in specific assets.

What was the asset allocation?

(#1 aligned with E/S characteristics) The Fund invested in:

1. 85.01% of its assets in securities of issuers with favorable ESG characteristics.
2. 28.44% in sustainable investments (#1A sustainable) of which 1% have an environmental objective (which is aligned with the EU Taxonomy), 19.3% have an environmental objective (which is not aligned with the EU Taxonomy), 8.14% have a social objective.

(#1B Other E/S characteristics) Includes securities of issuers with favorable ESG characteristics but are not sustainable investments.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
01/01/2024 -
31/12/2024

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

To comply with the EU Taxonomy, the criteria for fossil gas include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Treasury	Treasury	16.68%
Quasi / Sov / Supra / Agency	Agencies	1.35%
Banks & Brokers	Banking	21.65%

	Wireless	2.46%
Utility	Utility: Electric	4.60%
	Utility: Other	2.42%
	Utility: Natural Gas	3.14%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund invested 1 % in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

 No

The following data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. The EU taxonomy figures disclosed may differ due to differences in the calculation methodology applied

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 0.42% for enabling activities, measured by Turnover

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.5% based on Turnover, 2.8% based on CapEx and 2.1% based on OpEx.

The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 1.9% based on Turnover, 3.5% based on CapEx and 2.6% based on OpEx.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund invested 19.3% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

What was the share of socially sustainable investments?

The Fund invested 8.14% in sustainable investments with a social objective

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilized their spheres of influence on companies via active engagement and stewardship activities.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Fidelity Global Dividend FAM Fund

Legal entity identifier: 635400I6FXODNXOBIV20

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 75.8% of sustainable investments

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favourable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The Fund partially made sustainable investments.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

● *How did the sustainability indicators perform?*

The performance of the sustainability indicators the Fund used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of December 2024 was:

1. 97.96% of the Fund was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 75.8% of the Fund was invested in sustainable investments.
4. 2.11% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy).
5. 37.9% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 35.79% of the Fund invested in sustainable investments with a social objective.

● *...and compared to previous periods?*

During the prior reference period the fund was invested

1. 96% of the Fund was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 62% of the Fund was invested in sustainable investments.
4. 0.68% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
5. 26% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 36% of the Fund invested in sustainable investments with a social objective.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While it did not have as its objective a sustainable investment, it had a proportion of 75.8% of sustainable investments. The sustainable investments had an environmental and social objective. The Fund determined a sustainable investment as follows:

a) issuers that undertake economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy. This contributed towards the climate change mitigation environmental EU Taxonomy objective; or

(b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or

(c) issuers which set a decarbonization target consistent with a 1.5 degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet’s oceans and forests. For further details see the UN website . Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This Included: Norms-based screens - the screening out of securities identified under Fidelity’s existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a ‘Very Severe’ controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators were used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available). Issuers with a low overall score were ineligible to be ‘sustainable investments’ unless Fidelity’s fundamental research determined that the issuer was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens were applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not considered sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

1. Due Diligence - analysis of whether principle adverse impacts were material and negative.
2. ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
3. Exclusions - Fidelity adopted a principles-based approach to ESG matters and as part of this they place companies which we regard as unsuitable investments on an Exclusion List, including but not limited to the following; a firm-wide exclusions list, that includes biological weapons, chemical weapons, the use of stock piling, production and transfer of anti-personnel mines, the treaty of non-proliferation of nuclear weapons and guidance from the UN, World Bank and other global authorities upholding ESG principles.
4. Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e., Climate Action 100+, Investors Against Slavery and Trafficking APAC).
5. Voting - Fidelity's voting policy included explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.
6. Quarterly reviews monitoring of principal adverse impacts through the Fund's quarterly review process.

Fidelity takes into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators are subject to data availability and may

evolve with improving data quality and availability. The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

The following data has been compiled as of December 31st 2024. Classification of securities including Sector and Country are determined as at the last day of the reference period. (December 31st 2024) This data includes all securities, excluding derivatives.

What was the proportion of sustainability-related investments?

The Fund invested 75.8% in sustainable investments for the period in review

What was the asset allocation?

(#1 aligned with E/S characteristics) The Fund invested in:

- 97.96% of its assets in securities of issuers with favourable ESG characteristics;
- 75.8% in sustainable investments (#1A sustainable) of which 2.11% have an environmental objective (which is aligned with the EU Taxonomy), 37.9% have an environmental objective (which is not aligned with the EU Taxonomy), 35.79% have a social objective.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2024 - 31/12/2024

Asset allocation describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

(#1B Other E/S characteristics) Includes securities of issuers with favourable ESG characteristics but are not sustainable investments.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments .
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made?*

Sector	Sub Sector	% of NAV

Industrials	Not applicable	20.69%
Financials	Not applicable	35.58%
Consumer Discretionary	Not applicable	7.11%
Communication Services	Not applicable	2.37%
Materials	Not applicable	5.33%
Utilities	Not applicable	3.97%
Consumer Staples	Not applicable	7.35%
Real Estate	Not applicable	0.00%
Health Care	Not applicable	5.80%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund invested 2.11% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The following data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. The EU taxonomy figures disclosed may differ due to differences in the calculation methodology applied

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 1.54% for enabling activities, measured by Turnover.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.8% based on Turnover, 1.4% based on CapEx and 1.1% based on OpEx.

The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.8% based on Turnover, 1.4% based on CapEx and 1.1% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund invested 37.9% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund invested 35.79% in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period, and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilised their spheres of influence on companies via active engagement and stewardship activities.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

How did this financial product perform compared to the reference benchmark?

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

- *How did this financial product perform compared with the reference benchmark?*

Not applicable

- *How did this financial product perform compared with the broad market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Fidelity World FAM Fund

Legal entity identifier: 635400XSVIZVRJLYNB15

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 75.73% of sustainable investments

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favourable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The Fund partially made sustainable investments.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

● *How did the sustainability indicators perform?*

The performance of the sustainability indicators the Fund used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of December 2024 was:

1. 87.52% of the Fund was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 75.73% of the Fund was invested in sustainable investments.
4. 0.3% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy).
5. 42.38% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 33.05% of the Fund invested in sustainable investments with a social objective.

● *...and compared to previous periods?*

During the prior reference period the Fund was invested

1. 93% of the Fund was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 91% of the Fund was invested in sustainable investments.
4. 2.29% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy);
5. 38% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy);
6. 50% of the Fund invested in sustainable investments with a social objective.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While it did not have as its objective a sustainable investment, it had a proportion of 75.73% of sustainable investments. The sustainable investments had an environmental and social objective. The Fund determined a sustainable investment as follows:

a) issuers that undertake economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy. This contributed towards the climate change mitigation environmental EU Taxonomy objective; or

(b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or

(c) issuers which set a decarbonization target consistent with a 1.5-degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet’s oceans and forests. For further details see the UN website . Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This Included: Norms-based screens - the screening out of securities identified under Fidelity’s existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a ‘Very Severe’ controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators were used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available). Issuers with a low overall score were ineligible to be ‘sustainable investments’ unless Fidelity’s fundamental research determined that the issuer was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens were applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not considered sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

1. Due Diligence - analysis of whether principal adverse impacts were material and negative.
2. ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
3. Exclusions - Fidelity adopted a principles-based approach to ESG matters and as part of this they place companies which we regard as unsuitable investments on an Exclusion List, including but not limited to the following; a firm-wide exclusions list, that includes biological weapons, chemical weapons, the use of stock piling, production and transfer of anti-personnel mines, the treaty of non-proliferation of nuclear weapons and guidance from the UN, World Bank and other global authorities upholding ESG principles.
4. Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e., Climate Action 100+, Investors Against Slavery and Trafficking APAC).
5. Voting - Fidelity's voting policy included explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.
6. Quarterly reviews monitoring of principal adverse impacts through the Fund's quarterly review process.

Fidelity takes into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators are subject to data availability and may evolve with improving data quality and availability. The above exclusions and screens (the "Exclusions") may

be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

The following data has been compiled as of December 31st 2024. Classification of securities including Sector and Country are determined as at the last day of the reference period. (December 31st 2024) This data includes all securities, excluding derivatives.

What was the proportion of sustainability-related investments?

The Fund invested 75.73% in sustainable investments for the period in review

What was the asset allocation?

(#1 aligned with E/S characteristics) The Fund invested in:

1. 87.52% of its assets in securities of issuers with favourable ESG characteristics;
2. 75.73% in sustainable investments (#1A sustainable) of which 0.3% have an environmental objective (which is aligned with the EU Taxonomy), 42.38% have an environmental objective (which is not aligned with the EU Taxonomy), 33.05% have a social objective.

(#1B Other E/S characteristics) Includes securities of issuers with favourable ESG characteristics but are not sustainable investments.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Information Technology	Not applicable	39.61%
Consumer Discretionary	Not applicable	8.97%
Financials	Not applicable	23.20%
Industrials	Not applicable	4.92%
Utilities	Not applicable	0.47%
Consumer Staples	Not applicable	1.71%
Health Care	Not applicable	10.18%

Real Estate	Not applicable	0.21%
Materials	Not applicable	0.51%
Energy	Not applicable	0.60%
Communication Services	Not applicable	7.33%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund invested 0.3% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The following data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. The EU taxonomy figures disclosed may differ due to differences in the calculation methodology applied

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.01% for transitional activities and 0.17% for enabling activities, measured by Turnover.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.5% based on Turnover, 3.4% based on CapEx and 2.5% based on OpEx.

The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.5% based on Turnover, 3.4% based on CapEx and 2.5% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund invested 42.38% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund invested 33.05% in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period, and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and

whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilised their spheres of influence on companies via active engagement and stewardship activities.

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Ah Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: M&G North American Value FAM Fund
Legal entity identifier: 635400NI1FETHUPUEU96

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
☒ ☐ Yes	☒ ☐ No
☐ It made sustainable investments with an environmental objective: ____% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 76.78% of sustainable investments ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective
☐ It made sustainable investments with a social objective: ____%	☐ It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach and a Positive ESG Tilt (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society ("Exclusionary Approach").

The Fund maintains a weighted average ESG rating that is either

- Higher than that of the equity market as represented by its investment universe; or
- Equivalent to at least an MSCI A rating, whichever is lower ("Positive ESG Tilt").

In constructing a portfolio positively tilted towards investments with better ESG characteristics, the Investment Manager may nonetheless invest in investments across the full spectrum of ESG ratings. At an individual security level, the Investment Manager favours investments with better ESG characteristics where this is not detrimental to the pursuit of the financial investment objective.

No reference benchmark has been designated for the purpose of attaining the Fund's promoted environmental and/or social characteristics.

The promoted environmental and social characteristics were met by all investments made for the Fund other than "Other" Investments. The alignment percentage indicated in the graphic below is tested against the Exclusionary Approach described below, showing the allocation between investments complying with the Exclusionary Approach and Investments which we as deem as "Other" as we do not consider they can be considered as aligned against the Exclusionary Approach as described in the precontractual annex, such as cash. The Positive ESG Tilt characteristic is not used as part of this alignment percentage test – instead, the Positive ESG Tilt is applied to all investments where data is available.

● **How did the sustainability indicators perform?**

Exclusionary Approach: *The Fund's sustainability indicators to test its compliance with its Exclusionary Approach were met at all times during the reporting period.*

Positive ESG Tilt:

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2024			
Portfolio weighted average ESG score	6.5	96.28%	99.50%
Investment Universe weighted average ESG score	6.6	-	-
ESG score corresponding to the lowest numerical value of the MSCI A rating	5.7	-	-

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2023			
Portfolio weighted average ESG score	6.5	98.75%	97.81%
Investment Universe weighted average ESG score	6.7	-	-
ESG score corresponding to the lowest numerical value of the MSCI A rating	5.7	-	-

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2022			
Portfolio weighted average ESG score	6.3	97.04%	97.04%
Investment Universe weighted average ESG score	6.7	-	-
ESG score corresponding to the lowest numerical value of the MSCI A rating	5.7	-	-

The Fund maintained a Weighted Average ESG score that was greater than the lower of the investment universe and the lowest numerical value of the MSCI A rating throughout the reporting period. The Fund's calculation methodology does not include those securities that do not have an ESG rating, or cash, near cash, some derivatives, and some collective investments schemes.

● **...and compared to previous periods?**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund's weighted average ESG Score was below the score of the investment universe this year, as it was last year.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Whilst the Fund does not commit to invest in sustainable investments, it can nonetheless allocate to sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager uses a series of proprietary tests based on available data to determine whether and how an investment makes positive contribution(s) towards environmental and social objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective as they are required to pass a series of tests, including:

- 1. Whether they represent significant exposure to businesses the Investment Manager considers harmful*
- 2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)*
- 3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures are compatible with sustainable investment*

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

All investments purchased by the Fund must pass the Investment Manager's good governance tests, and in addition, sustainable investments must also pass tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

How did this financial product consider principal adverse impacts on sustainability factors?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1st January 2024 to 31 December 2024

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

What were the top investments of this financial product? Please note that the Investment Manager identifies separate company issues when compiling this table of Top 15

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

holdings rather than grouping issuers at a company (issuer) level.

Asset Allocation
describes the
share of
investments in
specific assets.

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund has committed to a minimum of 70% of the Fund's assets to be aligned to the environmental or social characteristics promoted. This includes a minimum 20% of the assets that are qualified as sustainable investments. A minimum of 0% of the Fund's assets are other investments not aligned to the environmental or social characteristics.

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The figures were calculated as an annual average of four quarterly measurements for the period ending 31 December 2024. Actual % investments that were aligned to the environmental or social characteristic promoted was 96.29% of NAV as at 31 December 2024, which is above the 70% minimum commitment. This comprised 76.78% NAV relating to sustainable investments which was above the 20% minimum threshold, and the remaining 19.51% NAV related to investments with other environmental and or social characteristics.

● What was the asset allocation?

The graphic below provides an overview of the asset allocation versus the established minimum thresholds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● In which economic sectors were the investments made?

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic Sector	% of Assets
MANUFACTURING	43.72%
INFORMATION AND COMMUNICATION	16.67%
FINANCIAL AND INSURANCE ACTIVITIES	14.80%
WHOLESALE AND RETAIL TRADE; REPAIR OF MOTOR VEHICLES AND MOT	5.85%
Other	3.89%
ELECTRICITY, GAS, STEAM AND AIR CONDITIONING SUPPLY	3.72%
MINING AND QUARRYING	3.59%
TRANSPORTATION AND STORAGE	3.18%
REAL ESTATE ACTIVITIES	2.60%
PROFESSIONAL, SCIENTIFIC AND TECHNICAL ACTIVITIES	1.45%
ADMINISTRATIVE AND SUPPORT SERVICE ACTIVITIES	0.53%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The Financial Product held 0 % in Taxonomy-aligned sustainable investments during the reference period. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Zeros across all 6 bars

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

- The Fund did not set a minimum share of investments in transitional and enabling activities. However, it was recorded that 0% of the Portfolio's investments were in transitional activities and 0% in enabling activities.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The taxonomy-aligned investments were the same in the current reference period compared to the previous period.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The share of sustainable investments in the Fund with an environmental objective not aligned with the EU taxonomy over the period was 43.94% This compares to the commitment of 5% overall of sustainable investments with environmental objectives that were not aligned to the EU Taxonomy made in the precontractual disclosure.

What was the share of socially sustainable investments?

The share of sustainable investments in the Fund with a social objective over the period was 32.84%. This compares to the commitment of 5% overall of socially sustainable investments made in the precontractual disclosure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Fund held varying levels of cash, in accordance with the purposes and safeguards explained in the precontractual annex.

The Fund may hold cash, near cash and money market funds and derivatives as “Other” investments, for any purpose permitted by the Fund’s investment policy. No minimum environmental or social safeguards are applied, other than as set out below.

Derivatives used to take investment exposure to diversified financial indices, and funds (i.e. UCITS and other UCIs) may be held for any reason permitted by the Fund’s investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test. No minimum environmental or social safeguards are applied to FX derivatives.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments’ alignment with the promoted characteristics.

It is also possible that the Fund may hold investments that are not in line with the promoted characteristics,

e.g. as a result of a merger or other corporate action, or as a result of the characteristics of a previously acquired investment changing. Where this happens, the Fund will generally seek to dispose of them in the best interests of investors, but may not always be able to do so immediately.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund applied an exclusion policy to achieve its Exclusionary Approach. Its compliance with the same is reported in the sustainability indicators section above.

How did this financial product perform compared to the reference benchmark?

● How does the reference benchmark differ from a broad market index?

N/A.No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

N/A.No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

● ***How did this financial product perform compared with the reference benchmark?***

N/A.No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

● ***How did this financial product perform compared with the broad market index?***

N/A.No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: AMUNDI STRATEGIC
BOND FAM FUND

Legal entity identifier:
635400UJOIMZRUEVQL70

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ ☐ Yes ☒ ☐ ☒ No

☐ It made sustainable investments with an environmental objective: _____ ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 26.08% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☐ It made a sustainable investments with a social objective: _____	☐ It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The product has respected all material aspects of the characteristics described in the prospectus.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did the sustainability indicators perform?

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate. For more detail, please refer to the Sustainable Investment section of the Prospectus.

At the end of the period :

- The weighted average ESG rating of the portfolio is **0.472 (D)**

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was **0.24 (D)**.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

- ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and

better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.

- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/01/2024 to 31/12/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made ?

<i>Sector</i>	<i>Sub-Sector</i>	<i>% Assets</i>

<i>Cash</i>	<i>Cash</i>	<i>4.87%</i>

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.86% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 31/12/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund’s share of investment in transitional activities was 0.12% and the share of investment in enabling activities was 0.22%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period: the percentage of investments with Taxonomy alignment was 0.81%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **16.77%** at the end of the period. This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 What was the share of socially sustainable investments?

The share of socially sustainable investments at the end of the period was 8.45%.

 What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are

in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It made **sustainable investments with an environmental objective:** _____

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made a **sustainable investments with a social objective:** _____

☒ It promoted **Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **63.66%** of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The product has respected all material aspects of the characteristics described in the prospectus.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach.

Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

For more detail, please refer to the Sustainable Investment section of the Prospectus.

At the end of the period :

- The weighted average ESG rating of the portfolio is **1.038 (C)**
- The weighted average ESG rating of the reference index is **0.736 (C)**

● **... and compared to previous periods?**

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.024 (C) and the weighted average ESG rating of the reference index was 0.679 (C).

● **What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g.tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g.GHG intensity of investee companies) via a combination of indicators (e.g.carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion** : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration** : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/01/2024 to 31/12/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
HSBC HOLDING PLC GBP	Financials	Banks	United Kingdom	2.65%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period

renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

the fund invested 1.12% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 31/12/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.15% and the share of investment in

enabling activities was 3.51%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period: the percentage of investments with Taxonomy alignment was 0.77%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **57.91%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 4.63%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within Amundi’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

Product name: EURO BOND FAM FUND

Legal entity identifier:
635400SLFDFKXB6WMM23

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It made **sustainable investments with an environmental objective:** _____

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made a **sustainable investments with a social objective:** _____

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **36.91%** of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The product has respected all material aspects of the characteristics described in the prospectus.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach.

Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

For more detail, please refer to the Sustainable Investment section of the Prospectus.

At the end of the period :

- The weighted average ESG rating of the portfolio is **1.058 (C)**
- The weighted average ESG rating of the reference index is **1.099 (C)**

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 1.106 (C) and the weighted average ESG rating of the reference index was 1.14 (C).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

— ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and

better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.

- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/01/2024 to 31/12/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made ?

Sector	Sub-Sector	% Assets
Treasuries	Treasuries	40.10%
Corporates	Banking	22.59%
Securitized	Mortgage Assets	11.21%
Government-Related	Agencies	3.21%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 2.52% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover** reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 31/12/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund’s share of investment in transitional activities was 0.33% and the share of investment in enabling activities was 0.32%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period: the percentage of investments with Taxonomy alignment was 5.94%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **31.61%** at the end of the period.
This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 2.78%.

 What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are

in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI's control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI's Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: EURO CORPORATE
FIXED INCOME FAM FUND

Legal entity identifier:
6354005UGUWVFJSFML27

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

X

No

It made sustainable investments with an environmental objective:

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made a sustainable investments with a social objective:

X

It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 62.51% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

X

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The product has respected all material aspects of the characteristics described in the prospectus.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- How did the sustainability indicators perform?

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

For more detail, please refer to the Sustainable Investment section of the Prospectus.

At the end of the period :

966

- The weighted average ESG rating of the portfolio is **0.902 (C)**
- The weighted average ESG rating of the reference index is **0.546 (C)**

● **... and compared to previous periods?**

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.84 (C) and the weighted average ESG rating of the reference index was 0.569 (C).

● **What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?**

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- Exclusion : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- ESG factors integration : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and

better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.

- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/01/2024 to 31/12/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made ?

Sector	Sub-Sector	% Assets

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 6.53% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

☐ Yes:

☐ In fossil gas☐ In nuclear energy

☒ No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 31/12/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.79% and the share of investment in enabling activities was 1.31%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period: the percentage of investments with Taxonomy alignment was 7.97%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **52.67%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was 3.31%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: FINECO AM EUROPEAN CORPORATE BOND FAM FUND
Legal entity identifier: 635400VB7WY5JVUSOX26

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes ☐ It made sustainable investments with an environmental objective: ____% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ It made sustainable investments with a social objective: ____%	☒ ☐ ☒ No ☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 35% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective ☐ It promoted E/S characteristics, but did not make any sustainable investments
---	---

Unless otherwise stated, all actual data within this periodic report are calculated as quarterly average figures for 2024(1 January 2024 – 31 December 2024).

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by this financial product included:

1. **Sustainable Investments:** The Fund partially invested in sustainable investments as defined as investment in companies and issuers that contribute to an environmental and/or social objective, while doing no significant harm. In 2024 the Fund had a proportion of 35% of sustainable investments.
2. **Positive Screening:** Consideration of ESG factors were a key element of portfolio construction. The Manager determined how companies integrated environmental and/or social characteristics by analysing environmental and/or social ratings attributed to such companies with the exclusion of environmental and/or social “laggards” from the Fund’s investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.
3. **Fund Level ESG Scoring:** A monthly independent analysis and classification of the Fund’s ESG score was performed internally by the Manager. A minimum ESG score of “A” was applied at Fund Level to ensure that the Fund’s ESG score did not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control served to highlight a minimum Fund level ESG score and promoted engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

Negative Screening (Norm-based exclusions): The Manager applied norms-based exclusions based on its Exclusion Policy. Exclusion categories considered in the Exclusion Policy were:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

● ***How did the sustainability indicators perform?***

The following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- i. The percentage of the Fund portfolio made in sustainable investments which was 35% in 2024;
- ii. The minimum Fund level ESG score which was A in 2024;
- iii. The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider) which was 97% for 2024; and
- iv. The percentage of the Fund investment universe subject to the Manager's exclusion policy which was 97% for 2024.

● **...and compared to previous periods?**

Historical comparison of sustainability indicators	FY 2022	FY 2023	FY 2024
The percentage of the Fund portfolio made in sustainable investments	15%	33%	35%
The minimum Fund level ESG score which was A	AA	AA	AA-
The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider)	96%	95%	97%
The percentage of the Fund investment universe subject to the Manager's exclusion policy	96%	95%	97%

Please be informed that the difference between the percentages of sustainable investments disclosed between 2022 and 2023 mainly relies on an update to the third party data provider's sustainable investments calculation methodology which the Manager relies on as follow:

As of 7 June 2023, MSCI updated their Sustainable Investment calculation methodology. An extra metric has been added to the positive contribution category, that includes companies with a carbon emissions reduction target approved by the Science Based Targets initiative ("SBTi"). SBTi is a partnership between CDP, the United Nations Global Compact, the World Wildlife Fund for Nature (WWF) and the World Resources Institute (WRI). Other frameworks for measuring and comparing GHG reduction targets exist (including those developed by MSCI ESG Research), however, SBTi is currently the most commonly used framework to assess the aggressiveness of GHG emission reduction targets required under international treaties. As a result, the Manager implemented this new metric, into its sustainable investment calculation methodology.

Link to our published sustainable investments methodology:

<https://finecoassetmanagement.com/wp-content/uploads/2023/09/FINECO-AM-Sustainable-Investment-Methodology.pdf>

All actual data in 2022 are calculated on the closing date of the accounting year.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund made was to promote environmental and/or social characteristics. The Fund assessed issuers of the underlying security and classified investment in issuers that met the below criteria as sustainable investments inline with Article 2 (17) of SFDR:

- a. Made in investee companies that demonstrate good governance;
- b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
- c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund allocates between Underlying holdings with an environmental, and/or a social objective. The Fund did not favour any specific type of sustainable investment.

In 2024, the Fund had a proportion of 35% of sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its Exclusion Policy.

— — ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Principal adverse impact (“PAI”) indicators were calculated at portfolio level. The results were compared with that of a chosen proxy benchmark representative of the Fund’s investment universe and/or peers. These calculations are used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager could improve at Fund level and/or where the Manager could engage with relevant issuers to improve on such indicators.

The Fund considered the following principal adverse sustainability impacts indicators for the proportion of assets qualified as sustainable investments:

Corporate mandatory indicators;

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators - Environment;

15. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators - Social;

16. Lack of a human rights policy

Sovereign mandatory indicator;

17. GHG intensity
18. Investee countries subject to social violations

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments which the Fund made and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights were assessed in the following ways:

1. Via PAI monitoring of the following indicators;
 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; and
 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.
2. Through ensuring that the sustainable investments that the Manager made are:
 - a. Made in investee companies that demonstrate good governance;
 - b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
 - c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Manager considered principal adverse impacts of its investment decisions on sustainability factors on an ongoing basis by monitoring the Fund portfolio against

mandatory and additional PAI indicators and as part of its investment decision making process and investment due diligence process and procedures. Principal adverse impacts were prioritized based on materiality relative to the objectives or characteristics of the Fund, provided that all minimum standards are met. The results were compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations formed the basis of assessment of adverse impacts on sustainability factors in order to determine what the Portfolio Managers could improve at Fund level and where the Portfolio Managers could engage with relevant issuers to improve on such indicators.

The specific PAI indicators that were taken into consideration for this product were:

Corporate mandatory indicators;

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators - Environment;

15. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators - Social;

16. Lack of a human rights policy

Sovereign mandatory indicator;

17. GHG intensity

18. Investee countries subject to social violations

More detailed information on the manner in which the Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement; "*Statement on principal adverse impacts of investment decisions on sustainability factors*".

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

35%

● *What was the asset allocation?*

97% of the Fund's Investments were aligned with the environmental and/or social characteristics promoted by the Fund. The Fund also commits to a minimum proportion of 5% in sustainable investments and in 2024 the Fund had a proportion of 35% of sustainable investments. The remaining investments of the Fund were invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. Calculations may rely on incomplete or inaccurate company or third party data.

Asset allocation describes the share of investments in specific assets.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 to 31 December 2024

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Historical comparison of the asset allocation for Article 8	FY 2022	FY 2023	FY 2024
#1 Aligned with E/S characteristics	96%	95%	97%
#2 Other	4%	5%	3%
#1A Sustainable	15%	33%	35%
#1B Other E/S characteristics	81%	62%	62%
Other environmental	11%	17%	34%
Social	8%	7%	1%

● *In which economic sectors were the investments made?*

Sector	Total (%)
Finance	58.08
Utilities	11.14
Consumer Non-Durables	3.78
Health Technology	3.75
Energy Minerals	3.21
Miscellaneous	2.87

Government	2.08
Producer Manufacturing	2.07
Technology Services	1.69
Communications	1.68
Cash	1.53
Consumer Services	1.47
Retail Trade	1.29
Commercial Services	1.16
Process Industries	1.10
Transportation	1.07
Industrial Services	1.02
Consumer Durables	0.39
Electronic Technology	0.37
Non-Energy Minerals	0.23

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation was not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In both 2022 and 2023, the share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that was not aligned with the European Taxonomy Regulation is 34%.

What was the share of socially sustainable investments?

Socially sustainable investments represented 1% of the financial product.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The portion of “Others” includes cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes along with other amounts contributing to the total.

Any “#2 Other” potential investments, other than cash or cash equivalents are screened according to the Manager’s Exclusion Policy.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Manager has integrated various house ESG policies and procedures to ensure the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product, such as a Positive Screening, Fund Level ESG Scoring and Negative Screening have been implemented and are monitored regularly.

Furthermore, the Fund invested 35% of its assets in “sustainable investments” as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as “sustainable investment” are indicated in the above question “*What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*”.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did this financial product perform compared to the reference benchmark?

- **How does the reference benchmark differ from a broad market index?**

Not applicable.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: M&G Optimal Income FAM Fund
Legal entity identifier: 635400ZSWNWUL3K7NJ24

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective**: ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective**: ____%

☒ ☐ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 55.38% of sustainable investments

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach and a Positive ESG Tilt (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society. For securitised investments such as asset-backed securities (ABS), this also includes assessing them against the Investment Manager's proprietary scoring methodology ("Exclusionary Approach"). Accordingly, the Investment Manager is promoting environmental and/or social characteristics by excluding certain investments that are considered to be detrimental to ESG Factors.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund maintained a weighted average ESG rating that is higher than that of its investment universe (“Positive ESG Tilt”). In constructing a portfolio positively tilted towards investments with better ESG characteristics, the Investment Manager may nonetheless invest in investments across the full spectrum of ESG ratings. At an individual security level, the Investment Manager favours investments with better ESG characteristics where this is not detrimental to the pursuit of the financial investment objective.

No reference benchmark has been designated for the purpose of attaining the Fund’s promoted environmental and/or social characteristics.

The promoted environmental and social characteristics were generally met by all investments made for the Fund other than “Other” Investments. The alignment percentage indicated in the graphic below is tested against the Exclusionary Approach described below, showing the allocation between investments complying with the Exclusionary Approach and Investments which we as deem as “Other” as we don’t consider they can be considered as aligned against the Exclusionary Approach as described in the precontractual annex, such as cash. The Positive ESG Tilt characteristic is not used as part of this alignment percentage test – instead, the Positive ESG Tilt is applied to all investments where data is available.

● **How did the sustainability indicators perform?**

Exclusionary Approach: The Fund's sustainability indicators to test its compliance with its Exclusionary Approach were met at all times during the reporting period.

Positive ESG Tilt:

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2024			
Portfolio weighted average ESG score	7.59	36.24%	-
Investment Universe weighted average ESG score	6.24	-	-

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2023			
Portfolio weighted average ESG score	6.4	48.67%	42.68%
Investment Universe weighted average ESG score	5.9	-	-

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2022			
Portfolio weighted average ESG score	6.6	55.61%	51.62%
Investment Universe weighted average ESG score	5.8	-	-

The Fund maintained a Weighted Average ESG score that was greater than the investment universe throughout the reporting period. The Fund’s calculation methodology does not include those securities that do not have an ESG rating, or cash, near cash, some derivatives and some collective investments schemes.

● **...and compared to previous periods?**

The Fund's weighted average ESG Score was ahead of the score of the investment universe this year, as it was last year.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Whilst the Fund does not commit to invest in sustainable investments, it can nonetheless allocate to sustainable investments of any type, i.e., investments with an environmental and/or social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager uses a series of proprietary tests based on available data to determine whether and how an investment makes positive contribution(s) towards environmental and social objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective as they are required to pass a series of tests, including:

- 1. Whether they represent significant exposure to businesses the Investment Manager considers harmful*
- 2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)*
- 3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures are compatible with sustainable investment*

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

All investments purchased by the Fund must pass the Investment Manager's good governance tests, and in addition, sustainable investments must also pass tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 24th November 2022 to 31 December 2022

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

What were the top investments of this financial product? Please note that the Investment Manager identifies separate company issues when compiling this table of Top 15 holdings rather than grouping issuers at a company (issuer) level.

Largest Investments	Sector	% Assets	Country

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund has committed to a minimum of 70% of the Fund's assets to be aligned to the environmental or social characteristics promoted. This includes a minimum 20% of the assets that are qualified as sustainable investments. A minimum of 0% of the Fund's assets are other investments not aligned to the environmental or social characteristics.

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The figures were calculated as an annual average of four quarterly measurements for the period ending 31 December 2024. Actual % investments that were aligned to the environmental or social characteristic promoted was 91.55% of NAV as at 31 December 2024, which is above the 70% minimum commitment. This comprised 55.38% NAV relating to sustainable investments which was above the 20% minimum threshold, and the remaining 36.16% NAV related to investments with other environmental and or social characteristics.

What was the asset allocation?

The graphic below provides an overview of the asset allocation versus the established minimum thresholds.

Asset Allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic Sector	% of Assets
General public administration activities	55.065%

Other monetary intermediation	14.897%
Trusts, funds and similar financial entities	8.183%
Other financial service activities, except insurance and pen	4.192%
Others	3.494%
Life insurance	2.018%
Fund management activities	1.930%
Other activities auxiliary to financial services, except ins	1.099%
Manufacture of communication equipment	0.974%
Distribution of gaseous fuels through mains	0.793%
Manufacture of pharmaceutical preparations	0.586%
Rental and operating of own or leased real estate	0.541%
Reinsurance	0.504%
Activities of holding companies	0.498%
Other credit granting	0.479%
Hotels and similar accommodation	0.445%
Service activities incidental to land transportation	0.420%
Central banking	0.363%
Manufacture of refined petroleum products	0.298%
Non-life insurance	0.283%
Other telecommunications activities	0.279%
Distribution of electricity	0.255%
Television programming and broadcasting activities	0.234%
Wireless telecommunications activities	0.224%
Service activities incidental to air transportation	0.208%
Manufacture of paper and paperboard	0.208%
Wired telecommunications activities	0.169%
Production of electricity	0.120%
Manufacture of other organic basic chemicals	0.114%
Other business support service activities n.e.c.	0.109%

Distilling, rectifying and blending of spirits	0.109%
Other personal service activities n.e.c.	0.108%
Manufacture of other parts and accessories for motor vehicle	0.100%
Transmission of electricity	0.096%
Temporary employment agency activities	0.092%
Manufacture of plastics in primary forms	0.085%
Passenger air transport	0.069%
Processing and preserving of meat	0.053%
Other software publishing	0.053%
Research and experimental development on biotechnology	0.043%
Hospital activities	0.042%
Manufacture of glues	0.040%
Publishing of newspapers	0.040%
Manufacture of bodies (coachwork) for motor vehicles; manufa	0.039%
Activities of collection agencies and credit bureaus	0.032%

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The Financial Product held 0.05 % in Taxonomy-aligned sustainable investments during the reference period. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of investments made in transitional and enabling activities?

The share of the Fund's investments made in transitional activities over the period was 0.10% and in enabling activities was 0.09%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Fund held 0.05% in Taxonomy-aligned sustainable investments during the reference period. This reflects a slight increase on the previous reporting period's figure which was 0.01%.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments in the Fund with an environmental objective not aligned with the EU taxonomy over the period was 24.07%. This compares to the commitment of 5% overall of sustainable investments with environmental objectives that were not aligned to the EU Taxonomy made in the precontractual disclosure.

What was the share of socially sustainable investments?

The share of sustainable investments in the Fund with a social objective over the period was 31.26%. This compares to the commitment of 5% overall of socially sustainable investments made in the precontractual disclosure.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Fund held varying levels of cash and near cash and money market funds, and derivatives, in accordance with the purposes and safeguards explained in the precontractual annex.

The Fund may hold cash, near cash and money market funds, FX, interest rate derivatives and similar derivatives (which may include certain technical trades such as government bond futures used for duration trades) as “Other” investments, for any purpose permitted by the Fund’s investment policy. No minimum environmental or social safeguards are applied.

Derivatives used to take investment exposure to diversified financial indices (excluding technical trades), and funds (i.e., UCITS and other UCIs) may be held for any reason permitted by the Fund’s investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments’ alignment with the promoted characteristics. It is also possible that the Fund may hold investments that are not in line with the promoted characteristics, e.g., as a result of a merger or other corporate action, or as a result of the characteristics of a previously acquired investment changing. Where this happens, the Fund will generally seek to dispose of them in the best interests of investors but may not always be able to do so immediately.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund applied an exclusion policy to achieve its Exclusionary Approach. Its compliance with the same is reported in the sustainability indicators section above.

How did this financial product perform compared to the reference benchmark?

● How does the reference benchmark differ from a broad market index?

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

● How did this financial product perform compared with the reference benchmark?

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

● How did this financial product perform compared with the broad market index?

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Schroder Euro Bond FAM Fund

Legal entity identifier: 635400INXZXUO9N6HF24

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ____%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 70% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the Bloomberg EURO Aggregate Index, based on the Investment Manager's rating system. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by the Investment Manager's proprietary tool that provides an aggregate estimate of the social and environmental costs and benefits that an issuer may create. It does this by scoring the issuer against a list of indicators – scores may be positive (for example, when an issuer pays more than average living wages) or negative (for example, when an issuer emits carbon). It does this using third party data as well as the Investment Manager's own estimates and assumptions and the outcome may differ from other sustainability tools and measures.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales or GDP of the relevant underlying issuer. For example, a score of +2% would mean that for every \$100 of sales or GDP the issuer generates, it would provide a net positive contribution to society and/or the environment of \$2. The sustainability score of the Fund is derived from the scores of all eligible issuers in the Fund's portfolio measured by the Investment Manager's proprietary tool.

The Fund also invested at least 10% of its assets in sustainable investments during the reference period.

The Fund used derivatives to meet the environmental and/or social characteristics promoted by the Fund, specifically to attain the Fund's sustainability score in the proprietary tool.

The reference period for this Fund is 1 January 2024 to 31 December 2024.

● **How did the sustainability indicators perform?**

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund's sustainability score for the reference period was 2.8% and the benchmark's sustainability score for the reference period was 1.5%. This means that the Fund's weighted average score over a rolling six-month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data.

In each case the sustainability score is calculated as described above.

During the reference period, the top 5 indicators in the Investment Manager's proprietary tool that contributed positively to the sustainability score of the Fund were:

- Avoided Emissions
- Clean Energy
- Education
- Power Provision
- Socio-Political Stability

The Investment Manager invested 70% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments during the reference period, based on quarter-end data. Sustainable investments are measured by reference to the sustainability score in the Investment Manager's proprietary tool and / or whether the asset is classified as a green, social and / or sustainable bond.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework

● **...and compared to previous periods?**

Sustainable investments

This table details the percentage of assets invested in sustainable investments, year on year

Period	Fund (%)
Jan 2024 - Dec 2024	70
Jan 2023 - Dec 2023	68

Sustainability score

This table details the Fund's and benchmark's sustainability score, year on year.

Period	Fund (%)
Jan 2024 - Dec 2024	2.8
Jan 2023 - Dec 2023	1.7

For 2023 the Fund sustainability score was calculated as an average of quarter-end data, from 2024 it is calculated as a weighted average score of a rolling 6-month period.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by the Investment Manager's proprietary tool and / or was classified as a green, social and / or sustainable bond.

The objectives of the sustainable investments that the Fund made included, but were not limited to:

- Avoided Emissions: the estimated environmental benefits of companies that enable system-or economy-wide reductions in carbon emissions;
- Clean Energy: the estimated environmental benefit associated with renewables and the accelerated transformation of countries' energy systems;
- Education: the estimated societal benefits of a country's education spend per school age capita;
- Power Provision: the estimated societal benefits of access to power and electricity. Assigned in proportion to a company's share of power provision revenues; and
- Socio-Political Stability: the estimated societal benefit a politically and socially stable country can provide in supporting a favourable business environment and attracting investment, thus contributing to long-run economic growth;

The above examples of the objectives of the sustainable investments that the Fund made during the reference period are based on the most significant objectives at each quarter-end. Other objectives may have applied during the reference period.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- The Investment Manager applied firm-wide exclusions to the Fund. These related to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons and thermal coal mining.
- The Fund excluded companies that derive revenues above certain thresholds from activities related to tobacco and thermal coal.
- The Fund excluded companies that are assessed by the Investment Manager to have breached one or more 'global norms' thereby causing significant environmental or social harm; these companies comprise the Investment Manager's 'global norms' breach list. The Investment Manager's determination of whether a company has been involved in such a breach considers relevant principles such as those contained in the UN Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. The 'global norms' breach list may be informed by assessments performed by third party providers and by proprietary research, where relevant to a particular situation. In exceptional circumstances a derogation may have been applied in order to allow the Fund to continue to hold a company on the Investment Manager's 'global norms' breach list, for example where the stated investment strategy of the Fund may otherwise be compromised. Any such company was not categorised as a sustainable investment.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- The Fund may have also applied certain other exclusions in addition to those summarised above.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

When seeking to identify significant harm, the Investment Manager's approach to taking into account the Principal Adverse Impacts (PAI) indicators involved taking both a quantitative and a qualitative approach. Investee companies deemed not to satisfy the quantitative thresholds would generally have been excluded, unless on a case-by-case basis the data was deemed not representative of a company's performance in the relevant area. Where it was not considered appropriate or feasible to set quantitative thresholds, the Investment Manager engaged, where relevant, in accordance with the priorities documented in the Schroders Engagement Blueprint and/or voting policy.

This framework is subject to ongoing review, particularly as the availability and quality of the data evolves.

The Investment Manager's approach included:

1. Quantitative: this included indicators where specific thresholds have been established:

- Via the application of exclusions. This approach is relevant to PAI 4 (Exposure to companies active in the fossil fuel sector), PAI 5 (Share of non-renewable energy consumption and production) and PAI 14 (Exposure to controversial weapons). Further, the following PAIs were assessed as part of Schroders 'global norms' breach list exclusion (which seeks to exclude companies where significant harm is occurring): PAI 7 (Activities negatively affecting biodiversity-sensitive areas), PAI 8 (Emissions to water), PAI 9 (Hazardous waste and radioactive waste ratio), PAI 10 (Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development Guidelines for Multinational Enterprises), PAI 11 (Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises and Voluntary) and PAI 14 in Table 3 (Number of identified cases of severe human rights issues and incidents).

- Via the application of an alert system flag if the relevant indicator(s) exceeded a threshold. These quantitative thresholds to assess significant harm are established centrally by their Sustainable Investment team and monitored systematically. This approach applies to indicators where they have segmented the population into harm groups to establish a threshold, such as carbon related PAI metrics, PAI 1 (GHG emissions), PAI 2 (Carbon footprint) and Voluntary PAI 4 in Table 2 (Investing in companies without carbon emission reduction initiatives). PAI 3 (GHG intensity of investee companies) operates in a similar way but the threshold is based on a revenue metric. A threshold for PAI 6 (Energy consumption intensity per high impact climate sector) is established based on the above-mentioned carbon measures. A similar approach has been taken for PAI 15 (GHG intensity). PAI 16 (Investee countries subject to social violations) also operates in the same way but based on data availability regarding social violations. Through this process the relevant issuer(s) that were deemed not to satisfy the quantitative thresholds were flagged to the Investment Manager for consideration, whose response may have involved selling the holdings(s) or maintaining the position if on a case-by-case basis the data was deemed not representative of a company's performance in the relevant area. Investee companies deemed to cause significant harm were excluded from the Fund.

2. Qualitative: This included PAI indicators where the Investment Manager believed that the data available did not enable them to make a quantitative determination regarding whether significant harm was done so as to warrant excluding an investment. In such cases, the Investment Manager engaged where possible with the company or companies held, in accordance with the priorities documented in the Schroders Engagement Blueprint and/or voting policy. This approach applies to indicators such as PAI 12 (Unadjusted gender pay

gap) and PAI 13 (Board gender diversity), where they engaged and used their voting rights where they considered appropriate. Both board gender diversity and disclosure of gender pay gap information are captured in the Schroders Engagement Blueprint.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

Companies on the Investment Manager's 'global norms' breach list were not categorised as sustainable investments. The Investment Manager's determination of whether a company should be included on such list considered the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, among other relevant principles. The 'global norms' breach list was informed by third party providers and proprietary research, where relevant.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager's approach to considering principal adverse impacts on sustainability factors differs depending on the relevant indicator. Some indicators were considered via the application of exclusions, some were considered via the investment process and some via engagement. Further details on how these have been considered during the reference period are detailed below.

PAIs were considered as part of pre-investment through the application of exclusions. These included:

- Controversial weapons: PAI 14 (Exposure to controversial weapons, such as anti-personnel mines, cluster munitions, chemical weapons and biological weapons).
- UNGC violators: PAI 10 (Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises) and Schroders' 'global norms' breach list which covers: PAI 7 (Activities negatively affecting biodiversity-sensitive areas), PAI 8 (Emissions to water), PAI 9 (Hazardous waste ratio), PAI 10 (Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises), PAI 11 (Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for

Multinational Enterprises) and PAI 14 in Table 3 (Number of identified cases of severe human rights issues and incidents).

- Companies that derived revenues above certain thresholds from activities related to thermal coal, that were deemed by the Investment Manager to contribute significantly to climate change were excluded from the investible universe: PAIs 1, 2, 3, 4 and 5 (Greenhouse gas emissions).

During the reference period, PAIs were also considered through integration in the issuer analysis part of their investment process. As part of the investment process, the Investment Manager's proprietary tool was used which incorporates several PAIs as a component of its scoring methodology. For example, PAI 1 and 2, were included as part of a company's overall governance/ environmental score and they considered the decarbonising and minimising emissions plans for a number of companies. For sovereign issuers, PAIs 15 (GHG intensity) and 16 (investee countries subject to social violation) are highly relevant and were considered when assessing the suitability of various countries' debt for the portfolio.

PAIs were also considered post-investment through engagement where the Investment Manager engaged in line with the approach and expectations set out in the Schroders Engagement Blueprint, which outlines their approach to active ownership. During the reference period, they engaged with investee companies on climate alignment related to PAI 1, 2, 3 and 4. For example, in reference to PAI 1, they engaged with a company in the energy sector to have them provide an update on their climate targets and transition plan. All PAI indicators are monitored via the Investment Manager's PAI dashboard.

There tend to be fewer opportunities to engage with sovereign issuers, as opposed to corporate issuers. During the reference period, however, they have had opportunities to engage with relevant sovereign and supranational issuers, primarily with respect to their approach to net zero carbon strategies (relating to PAI 15, GHG intensity).

A summary of the Fund's engagement activity during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Climate Change	51
Corporate Governance	17
Human Rights	12
Natural Capital and Biodiversity	9
Diversity and Inclusion	6
Human Capital Management	4

The engagements shown relate to engagements with companies and issuers. The Investment Manager's approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves.

What were the top investments of this financial product?

During the reference period the top 15 investments were:

Largest Investments	Sector	% Assets	Country
SPAIN (KINGDOM OF) SR REGS .7% 30 Apr 2032	Sovereign (Developed)	2.08	Spain
SPAIN (KINGDOM OF) SR GOVT 0% 31 Jan 2028	Sovereign (Developed)	2.07	Spain

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **1 January 2024 to 31 December 2024**

The list above represents the average of the Fund's holdings at each quarter-end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source.

What was the proportion of sustainability-related investments?

What was the asset allocation?

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 93%. The Fund maintained a higher overall sustainability score than the Bloomberg EURO Aggregate Index and so the Fund's investments that were scored by the Investment Manager's proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average during the reference period, based on quarter-end data. From June 2024 also included within #1 are any green, social or sustainable bonds that were not scored by the Investment Manager's proprietary sustainability tool.

The Fund invested 70% of its assets in sustainable investments. This percentage represents the average during the reference period, based on quarter-end data. Within this, 35% was invested in sustainable investments with an environmental objective and 36% was invested in sustainable investments with a social objective. The percentage of sustainable investments with an environmental objective and the percentage of sustainable investments with a social objective may not sum to the percentage of

sustainable investments, due to rounding. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by the Investment Manager's proprietary tool or from June 2024 was classified as a green, social and / or sustainable bond. With the exception of any green or social bonds, which will be classified as having an environmental and social objective respectively, a sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in the Investment

Asset allocation describes the share of investments in specific assets.

Manager’s proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both “costs” and “benefits”.

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders’ proprietary sustainability tool and so did not contribute towards the Fund’s sustainability score.

In which economic sectors were the investments made?

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Sovereign (Developed)	Sovereign (Developed)	29.37
Financial	Banking	21.22
Financial	Financial Services	4.4
Financial	Insurance	1.35
Industrial	Automotive	1.86
Industrial	Healthcare	1.07
Industrial	Retail	1.06
Industrial	Transportation	1.05
Industrial	Basic Industry	1.04
Industrial	Consumer Goods	0.99
Industrial	Integrated Energy	0.84
Industrial	Capital Goods	0.79
Industrial	Media & Entertainment	0.7
Industrial	Real Estate	0.64
Industrial	Telecommunications	0.63
Industrial	Technology & Electronics	0.35
Industrial	Energy - Exploration & Production	0.33
Industrial	Leisure	0.06
Supranational	Supranational	6.13
Utilities	Electric - Generation	2.44
Utilities	Electric - Distr/Trans	1.13
Utilities	Electric - Integrated	1.09
Utilities	Non-Electric Utilities	0.26
Securitized	Mortgage Backed	3.93
Foreign Sovereign	Foreign Sovereign	3.48
Agency	Agency	3.37
Local Authority	Local Authority	3.22
Cash Equivalents	Treasury Bills	2.46
Government Guaranteed	Government Guaranteed	2.15
Cash	Cash	0.91
Cash	Margin Cash	0.67
EMD Sovereign	EMD Sovereign	1.08
Derivatives	Inflation Derivatives	0.02
Derivatives	Interest Rate Derivatives	-0.03
Derivatives	FX Derivatives	-0.05

The list above represents the average of the Fund's holdings at each quarter-end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund’s investments (including transitional and enabling activities) with an environmental objective were aligned with the EU Taxonomy. Taxonomy alignment of this Fund’s investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund’s portfolio.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

Yes:

In fossil gas

In nuclear energy

No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

² As there is no Taxonomy-alignment, there is no impact on the graph if sovereign bonds are excluded (i.e. the percentage of Taxonomy-aligned investments remains 0%) and the Management Company therefore believes that there is no need to mention this information.

● **What was the share of investments made in transitional and enabling activities?**

As per the above, the share of investments by the Fund in transitional and enabling activities has been deemed to constitute 0% of the Fund's portfolio.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The question is not applicable.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 35%.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 36%.

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders' proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders' credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through a Schroders' proprietary tool, which supports the analysis of a counterparty's management of environmental, social and governance trends and challenges.

Investment Manager's credit risk team monitored the counterparties and during the reference period, to the extent counterparties were removed from the approved list for all funds in line with Schroders' policy and compliance requirements, such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities

are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund when selecting the assets held by the Fund;
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in its Engagement Blueprint (link <https://mybrand.schroders.com/m/3222ea4ed44a1f2c/original/schroders-engagement-blueprint.pdf>). A summary of the Fund's engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through our engagement activities, we build relationships and have a two-way dialogue with our investee companies.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

● *How does the reference benchmark differ from a broad market index?*

This question is not applicable.

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This question is not applicable.

● *How did this financial product perform compared with the reference benchmark?*

This question is not applicable.

● *How did this financial product perform compared with the broad market index?*

This question is not applicable.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: European Equity FAM Fund

Legal entity identifier: 635400NG22RCW3MTWI11

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ ☐ ☒ No

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 86.83% of sustainable investments

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators

measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favourable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management

and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The Fund partially made sustainable investments.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

● *How did the sustainability indicators perform?*

The performance of the sustainability indicators the Fund used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of December 2024 was:

1. 98.73% of the Fund was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 86.83% of the Fund was invested in sustainable investments.
4. 1.53% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy).
5. 45.69% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 39.61% of the Fund invested in sustainable investments with a social objective.

● *...and compared to previous periods?*

During the prior reference period the Fund was invested

1. 99% of the Fund was invested in securities of issuers with favourable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 69% of the Fund was invested in sustainable investments.
4. 2.68% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy).
5. 38% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 28% of the Fund invested in sustainable investments with a social objective.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While it did not have as its objective a sustainable investment, it had a proportion of 86.83% of sustainable investments. The sustainable investments had an environmental and social objective. The Fund determined a sustainable investment as follows:

Principal adverse impacts are the most significant negative impact of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

(a) issuers that undertake economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy. This contributed towards the climate change mitigation environmental EU Taxonomy objective; or

(b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or

(c) issuers which set a decarbonization target consistent with a 1.5 degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

The SDGs are a series of goals published by the United Nations which recognise that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet’s oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This Included: Norms-based screens - the screening out of securities identified under Fidelity’s existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a ‘Very Severe’ controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labour rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators were used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available). Issuers with a low overall score were ineligible to be ‘sustainable investments’ unless Fidelity’s fundamental research determined that the issuer was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Norms-based screens were applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labour, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labour Organisation (ILO) Conventions, were not considered sustainable investments.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

1. Due Diligence - analysis of whether principle adverse impacts were material and negative.
2. ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
3. Exclusions - Fidelity adopted a principles-based approach to ESG matters and as part of this they place companies which we regard as unsuitable investments on an Exclusion List, including but not limited to the following; a firm-wide exclusions list, that includes biological weapons, chemical weapons, the use of stock piling, production and transfer of anti-personnel mines, the treaty of non-proliferation of nuclear weapons and guidance from the UN, World Bank and other global authorities upholding ESG principles.
4. Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).

5. Voting - Fidelity's voting policy included explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.
6. Quarterly reviews monitoring of principal adverse impacts through the Fund's quarterly review process.

Fidelity takes into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators are subject to data availability and may evolve with improving data quality and availability. The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 01/01/2024 - 31/12/2024

Largest investments	Sector	% Assets	Country

The following data has been compiled as of December 31st 2024. Classification of securities including Sector and Country are determined as at the last day of the reference period. (December 31st 2024) This data includes all securities, excluding derivatives.

What was the proportion of sustainability-related investments?

The Fund invested 86.83% in sustainable investments for the period in review.

What was the asset allocation?

(#1 aligned with E/S characteristics) The Fund invested in:

- 98.73% of its assets in securities of issuers with favorable ESG characteristics.
- 86.83% in sustainable investments (#1A sustainable) of which 1.53% have an environmental objective (which is aligned with the EU Taxonomy), 45.69% have an environmental objective (which is not aligned with the EU Taxonomy), 39.61% have a social objective.

(#1B Other E/S characteristics) Includes securities of issuers with favourable ESG characteristics but are not sustainable investments.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive safety and waste management

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

-turnover reflecting the share of revenue from green activities of investee companies.

-capital expenditure (CapEx) showing the green investments made by investee companies, e.g., for a transition to a green economy.

-operational expenditure (OpEx) reflecting green operational activities of investee companies.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852

Sector	Sub Sector	% of NAV

Consumer Staples	Not applicable	10.19%
Utilities	Not applicable	1.59%
Real Estate	Not applicable	1.21%
Energy	Not applicable	3.02%
Financials	Not applicable	18.86%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund invested 1.53% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The two graphs below show in dark blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The following data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. The EU taxonomy figures disclosed may differ due to differences in the calculation methodology applied

What was the share of investments made in transitional and enabling activities?

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0% for transitional activities and 1.09% for enabling activities, measured by Turnover.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.8% based on Turnover, 5.2% based on CapEx and 4.3% based on OpEx.

The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 2.8% based on Turnover, 5.2% based on CapEx and 4.3% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund invested 45.69% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund invested 39.61% in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilised their spheres of influence on companies via active engagement and stewardship activities.

How did this financial product perform compared to the reference benchmark?

Not Applicable

● *How does the reference benchmark differ from a broad market index?*

Not Applicable

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not Applicable

● *How did this financial product perform compared with the reference benchmark?*

Not Applicable

● *How did this financial product perform compared with the broad market index?*

Not Applicable

Reference benchmarks are indexes to measure whether the financial products attain the environmental or social characteristics that they promote.

ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: FINECO AM GLOBAL PREMIUM EQUITIES FUND

Legal entity identifier: 635400DO3AOIRW2P2Q44

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes	☒ ☐ ☒ No
☐ It made sustainable investments with an environmental objective: ____% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☐ It made sustainable investments with a social objective: ____%	☒ It promoted E/S characteristics, but did not make any sustainable investments

Unless otherwise stated, all actual data within this periodic report are calculated as quarterly average figures for 2024 (1 January 2024 – 31 December 2024).

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by this financial product included;

- Positive Screening:** Consideration of ESG factors was a key element of portfolio construction. The Manager determined how companies integrated environmental and/or social characteristics by analysing environmental and/or social ratings

attributed to such companies with the exclusion of environmental and/or social “laggards” from the Fund’s investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supported a tilt towards investment in issuers that have a more positive impact on the environment or society at large.

2. Fund Level ESG Scoring: A monthly independent analysis and classification of the Fund’s ESG score was performed internally by the Manager. A minimum ESG score of “A” was applied at Fund Level to ensure that the Fund’s ESG score did not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control served to highlight a minimum Fund level ESG score and promoted engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social characteristics.

3. Negative Screening (Norm-based exclusions): The Manager applied norms-based exclusions based on its Exclusion Policy. Exclusion categories considered in the Exclusion Policy were:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

● ***How did the sustainability indicators perform?***

The following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund in 2024;

- i. The Fund level ESG score was rated MSCI “AA-” or above in 2024;
- ii. The percentage of the Fund’s portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider) which was 98% in 2024; and
- iii. The percentage of the Fund investment universe subject to the Manager’s exclusion policy which was 98% in 2024.

● ***...and compared to previous periods?***

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Historical comparison of sustainability indicators	FY 2022*	FY 2023	FY 2024
The Fund level ESG score	A	AA	AA-
The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider)	97%	98%	98%
The percentage of the Fund investment universe subject to the Manager's exclusion policy	97%	98%	98%

**All actual data in 2022 are calculated on the closing date of the accounting year.*

- ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

Not applicable

- ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

Not applicable

- *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

- *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Manager considered principal adverse impacts of its investment decisions on sustainability factors on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators and as part of its investment decision making process and investment due diligence process and procedures. Principal adverse impacts were prioritized based on materiality relative to the objectives or characteristics of the Fund, provided that all minimum standards are met. The results were compared with that of a chosen proxy benchmark representative of the Fund’s investment universe and/or peers. These calculations formed the basis of assessment of adverse impacts on sustainability factors in order to determine what the Portfolio Managers could improve at Fund level and where the Portfolio Managers could engage with relevant issuers to improve on such indicators.

The specific PAI indicators that were taken into consideration for this product were;

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators: Environment

4. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators: Social

9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which the Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement; "*Statement on principal adverse impacts of investment decisions on sustainability factors*".

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas
 - ☐ In nuclear energy
- ☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In 2022, the share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The portion of “Others” includes cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes along with other amounts.

Any “#2 Other” potential investments, other than cash or cash equivalents are screened according to the Manager’s exclusion policy.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Manager has integrated various house ESG policies and procedures to ensure the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product, such as a Positive Screening, Fund Level ESG Scoring and Negative Screening have been implemented and are monitored regularly.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

How did this financial product perform compared to the reference benchmark?

- *How does the reference benchmark differ from a broad market index?*
Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
Not applicable

- *How did this financial product perform compared with the reference benchmark?*
Not applicable

- *How did this financial product perform compared with the broad market index?*
Not applicable

ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: FINECO AM GLOBAL EQUITY FUND

Legal entity identifier: 635400PYVTDBAFTZMC56

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 58% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise stated, all actual data within this periodic report are calculated as quarterly average figures for 2024 (1 January 2024– 31 December 2024).

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by this financial product included;

1. **Sustainable Investments:** The Fund partially invested in sustainable investments as defined as investment in companies and issuers that contribute to an environmental and/or social objective, while doing no significant harm. In 2024, the Fund had a proportion of 58% of sustainable investments
2. **Positive Screening:** Consideration of ESG factors was a key element of portfolio construction. The Manager determined how companies integrated environmental and/or social characteristics by analysing environmental and/or social ratings attributed to such companies with the exclusion of environmental and/or social “laggards” from the Fund’s investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supported a tilt towards investment in issuers that have a more positive impact on the environment or society at large.
3. **Fund Level ESG Scoring:** A monthly independent analysis and classification of the Fund’s ESG score was performed internally by the Manager. A minimum ESG score of “A” was applied at Fund Level to ensure that the Fund’s ESG score did not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control served to highlight a minimum Fund level ESG score and promoted engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social characteristics.
4. **Negative Screening (Norm-based exclusions):** The Manager applied norms-based exclusions based on its Exclusion Policy. Exclusion categories considered in the Exclusion Policy were:
 - United Nations Global Compact Principles
 - Controversial Weapons
 - Tobacco
 - Climate Change
 - Forced Labour

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

● ***How did the sustainability indicators perform?***

The following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund in 2024

;

- i. The percentage of the Fund portfolio made in sustainable investments which was 58%
- ii. The Fund level ESG score which was rated MSCI “AA-” or above in 2024;
- iii. The percentage of the Fund’s portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider) which was 99%; and
- iv. The percentage of the Fund investment universe subject to the Manager’s exclusion policy which was 99%

● **...and compared to previous periods?**

Historical comparison of sustainability indicators	FY 2022	FY 2023	FY 2024
The percentage of the Fund portfolio made in sustainable investments	0%	53%	58%
The Fund level ESG score	AA	AA	AA-
The percentage of the Fund’s portfolio rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider)	98%	98%	99%
The percentage of the Fund investment universe subject to the Manager’s exclusion policy	98%	98%	99%

Please be informed that the difference between the percentages of sustainable investments disclosed between 2022 and 2023 mainly relies on an update to the third party data provider’s sustainable investments calculation methodology which the Manager relies on as follow:

As of 7 June 2023, MSCI updated their Sustainable Investment calculation methodology. An extra metric has been added to the positive contribution category, that includes companies with a carbon emissions reduction target approved by the Science Based Targets initiative (“SBTi”). SBTi is a partnership between CDP, the United Nations Global Compact, the World Wildlife Fund for Nature (WWF) and the World Resources Institute (WRI). Other frameworks for measuring and comparing GHG reduction targets exist (including those developed by MSCI ESG Research), however, SBTi is currently the most commonly used framework to assess the aggressiveness of GHG emission reduction targets required under international treaties. As a result, the Manager implemented this new metric, into its sustainable investment calculation methodology.

Link to our published sustainable investments methodology:
<https://finecoassetmanagement.com/wp-content/uploads/2023/09/FINECO-AM-Sustainable-Investment-Methodology.pdf>

All actual data in 2022 are calculated on the closing date of the accounting year

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund made was to promote environmental and/or social characteristics. The Fund assessed issuers of the underlying security and classified investment in issuers that met the below criteria as sustainable investments inline with Article 2 (17) of SFDR;

- a. Made in investee companies that demonstrate good governance;
- b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
- c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund allocated between underlying holdings with an environmental, and/or a social objective. The Fund did not favour any specific type of sustainable investment.

In 2024, the Fund had a proportion of 58% of sustainable investments

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its Exclusion Policy.

— — ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Principal adverse impact (“PAI”) indicators were calculated at portfolio level. The results were compared with that of a chosen proxy benchmark representative of the Fund’s investment universe and/or peers. These calculations are used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager could improve at Fund level and/or where the Manager could engage with relevant issuers to improve on such indicators.

The Fund considered the following principal adverse sustainability impacts indicators for the proportion of assets qualified as sustainable investments:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators: Environment

4. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators: Social

9. Lack of a human rights policy

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments which the Fund made and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights were assessed in the following ways;

1. Via PAI monitoring of the following indicators;
 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
2. Through ensuring that the sustainable investments that the Manager made are:
 - a. Made in investee companies that demonstrate good governance:
 - b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
 - c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Manager considered principal adverse impacts of its investment decisions on sustainability factors on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators and as part of its investment decision making process and investment due diligence process and procedures. Principal adverse impacts were prioritized based on materiality relative to the objectives or characteristics of the Fund, provided that all minimum standards are met. The results were compared with that

of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations formed the basis of assessment of adverse impacts on sustainability factors in order to determine what the Portfolio Managers could improve at Fund level and where the Portfolio Managers could engage with relevant issuers to improve on such indicators.

The specific PAI indicators that were taken into consideration for this product were;

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators: Environment

4. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators: Social

9. Lack of a human rights policy

More detailed information on the manner in which the Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement; "*Statement on principal adverse impacts of investment decisions on sustainability factors*".

What were the top investments of this financial product?

Asset allocation describes the share of investments in specific assets.

Largest investments	Sector	% Assets	Country
Alphabet Inc. Class C	Interactive Media & Services	3.77	United States
Microsoft Corporation	Systems Software	3.01	United States
Broadcom Inc.	Semiconductors	2.15	United States
Oracle Corporation	Systems Software	1.88	United States
Mastercard Incorporated Class A	Transaction & Payment Processing Services	1.85	United States
Visa Inc. Class A	Transaction & Payment Processing Services	1.80	United States
Constellation Software Inc.	Application Software	1.76	Canada
Keysight Technologies Inc	Electronic Equipment & Instruments	1.59	United States
London Stock Exchange Group plc	Financial Exchanges & Data	1.58	United Kingdom
ServiceNow, Inc.	Systems Software	1.31	United States
Goldman Sachs Group, Inc.	Investment Banking & Brokerage	1.29	United States
Pfizer Inc.	Pharmaceuticals	1.29	United States
Applied Materials Corporation	Semiconductor Materials & Equipment	1.23	United States
Waste Management, Inc.	Environmental & Facilities Services	1.20	United States
Omnicom Group Inc	Advertising	1.18	United States

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 – 31 December 2024

What was the proportion of sustainability-related investments?

58%

● **What was the asset allocation?**

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

99% of the Fund’s Investments were aligned with the environmental and/or social characteristics promoted by the Fund. The Fund also commits to a minimum proportion of 10% in sustainable investments and as at 31 December the Fund had a proportion of 58% of sustainable investments. The remaining investments of the Fund were invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. Calculations may rely on incomplete or inaccurate company or third party data.

Historical comparison of the asset allocation for Article 8	FY 2022	FY 2023	FY 2024
#1 Aligned with E/S characteristics	98%	98%	99%
#2 Other	2%	2%	1%
#1A Sustainable	0%	53%	58%
#1B Other E/S characteristics	98%	45%	41%
Other environmental	12%	13%	58%
Social	12%	14%	0%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation was not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In 2022, the share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that was not aligned with the European Taxonomy Regulation is 58%.

What was the share of socially sustainable investments?

Socially sustainable investments represented 0% of the financial product.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The portion of “Others” includes cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes along with other amounts.

Any “#2 Other” potential investments, other than cash or cash equivalents are screened according to the Manager’s exclusion policy.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Manager has integrated various house ESG policies and procedures to ensure the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product, such as a Positive Screening, Fund Level ESG Scoring and Negative Screening have been implemented and are monitored regularly.

Furthermore, the Fund invested 58% of its assets in “sustainable investments” as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as “sustainable investment” are indicated in the above question *“What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives?”*.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did this financial product perform compared to the reference benchmark?

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable

- ***How did this financial product perform compared with the broad market index?***

Not applicable

ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: FAM EURO CORPORATE BONDS FUND

Legal entity identifier: 549300JHYC8E0CZ4L556

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ____%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 36% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise stated, all actual data within this periodic report are calculated as quarterly average figures for 2024(1 January 2024 – 31 December 2024).

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by this financial product included:

1. **Sustainable Investments:** The Fund partially invested in sustainable investments as defined as investment in companies and issuers that contribute to an environmental and/or social objective, while doing no significant harm. In 2024 the Fund had a proportion of 36% of sustainable investments.
2. **Positive Screening:** Consideration of ESG factors were a key element of portfolio construction. The Manager determined how companies integrated environmental and/or social characteristics by analysing environmental and/or social ratings attributed to such companies with the exclusion of environmental and/or social “laggards” from the Fund’s investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.
3. **Fund Level ESG Scoring:** A monthly independent analysis and classification of the Fund’s ESG score was performed internally by the Manager. A minimum ESG score of “A” was applied at Fund Level to ensure that the Fund’s ESG score did not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control served to highlight a minimum Fund level ESG score and promoted engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

Negative Screening (Norm-based exclusions): The Manager applied norms-based exclusions based on its Exclusion Policy. Exclusion categories considered in the Exclusion Policy were:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

● ***How did the sustainability indicators perform?***

The following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- i. The percentage of the Fund portfolio made in sustainable investments which was 36% in 2024;
- ii. The minimum Fund level ESG score which was A in 2024;
- iii. The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider) which was 98% for 2024; and
- iv. The percentage of the Fund investment universe subject to the Manager's exclusion policy which was 98% for 2024.

● **...and compared to previous periods?**

Historical comparison of sustainability indicators	FY 2022	FY 2023	FY 2024
The percentage of the Fund portfolio made in sustainable investments	12 %	37 %	36 %
Fund level ESG score	AA	AA	AA-
The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider)	95 %	96%	98 %
The percentage of the Fund investment universe subject to the Manager's exclusion policy	95 %	96%	98 %

Please be informed that the difference between the percentages of sustainable investments disclosed between 2022 and 2023 mainly relies on an update to the third party data provider's sustainable investments calculation methodology which the Manager relies on as follow:

As of 7 June 2023, MSCI updated their Sustainable Investment calculation methodology. An extra metric has been added to the positive contribution category, that includes companies with a carbon emissions reduction target approved by the Science Based Targets initiative ("SBTi"). SBTi is a partnership between CDP, the United Nations Global Compact, the World Wildlife Fund for Nature (WWF) and the World Resources Institute (WRI). Other frameworks for measuring and comparing GHG reduction targets exist (including those developed by MSCI ESG Research), however, SBTi is currently the most commonly used framework to assess the aggressiveness of GHG emission reduction targets required under international treaties. As a result, the Manager implemented this new metric, into its sustainable investment calculation methodology.

Link to our published sustainable investments methodology:

<https://finecoassetmanagement.com/wp-content/uploads/2023/09/FINECO-AM-Sustainable-Investment-Methodology.pdf>

All actual data in 2022 are calculated on the closing date of the accounting year.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund made was to promote environmental and/or social characteristics. The Fund assessed issuers of the underlying security and classified investment in issuers that met the below criteria as sustainable investments inline with Article 2 (17) of SFDR:

- a. Made in investee companies that demonstrate good governance;
- b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
- c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund allocates between Underlying holdings with an environmental, and/or a social objective. The Fund did not favour any specific type of sustainable investment.

In 2024, the Fund had a proportion of 36% of sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its Exclusion Policy.

— — ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Principal adverse impact (“PAI”) indicators were calculated at portfolio level. The results were compared with that of a chosen proxy benchmark representative of the Fund’s investment universe and/or peers. These calculations are used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager could improve at Fund level and/or where the Manager could engage with relevant issuers to improve on such indicators.

The Fund considered the following principal adverse sustainability impacts indicators for the proportion of assets qualified as sustainable investments:

Corporate mandatory indicators;

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators - Environment;

15. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators - Social;

16. Lack of a human rights policy

Sovereign mandatory indicator;

17. GHG intensity
18. Investee countries subject to social violations

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments which the Fund made and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights were assessed in the following ways:

1. Via PAI monitoring of the following indicators;
 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; and
 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.
2. Through ensuring that the sustainable investments that the Manager made are:
 - a. Made in investee companies that demonstrate good governance;
 - b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
 - c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Manager considered principal adverse impacts of its investment decisions on sustainability factors on an ongoing basis by monitoring the Fund portfolio against

mandatory and additional PAI indicators and as part of its investment decision making process and investment due diligence process and procedures. Principal adverse impacts were prioritized based on materiality relative to the objectives or characteristics of the Fund, provided that all minimum standards are met. The results were compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations formed the basis of assessment of adverse impacts on sustainability factors in order to determine what the Portfolio Managers could improve at Fund level and where the Portfolio Managers could engage with relevant issuers to improve on such indicators.

The specific PAI indicators that were taken into consideration for this product were:

Corporate mandatory indicators;

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators - Environment;

15. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators - Social;

16. Lack of a human rights policy

Sovereign mandatory indicator;

17. GHG intensity

18. Investee countries subject to social violations

More detailed information on the manner in which the Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement; "*Statement on principal adverse impacts of investment decisions on sustainability factors*".

What were the top investments of this financial product?

Largest investments	% Assets	Sector	Country
Government Of Germany 0.25% 15-feb-2027	0.97	Government	Germany
Government Of Italy 4.35% 01-nov-2033	0.83	Government	Italy

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 to 31 December 2024

What was the proportion of sustainability-related investments?

36%

● **What was the asset allocation?**

98% of the Fund's Investments were aligned with the environmental and/or social characteristics promoted by the Fund. The Fund also commits to a minimum proportion of 5% in sustainable investments and in 2024 the Fund had a proportion of 36% of sustainable investments. The remaining investments of the Fund were invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. Calculations may rely on incomplete or inaccurate company or third party data.

Asset allocation describes the share of investments in specific assets.

Historical comparison of the asset allocation for Article 8	FY 2022	FY 2023	FY 2024
#1 Aligned with E/S characteristics	95%	96%	98%
#2 Other	5%	4%	2%
#1A Sustainable	12%	37%	36%
#1B Other E/S characteristics	84%	59%	62%
Other environmental	7%	14%	35%
Social	7%	9%	1%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● ***In which economic sectors were the investments made?***

Sector	Total (%)
Finance	56.79
Utilities	9.88
Consumer Non-Durables	3.93
Government	3.74
Health Technology	3.54
Energy Minerals	2.52
Cash	2.22

Producer Manufacturing	1.76
Industrial Services	1.74
Commercial Services	1.72
Miscellaneous	1.66
Technology Services	1.57
Retail Trade	1.48
Transportation	1.06
Process Industries	0.97
Consumer Durables	0.89
Health Services	0.29
Electronic Technology	0.20
Non-Energy Minerals	0.07

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund’s portfolio alignment with the Taxonomy Regulation was not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

In both 2022 and 2023, the share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that was not aligned with the European Taxonomy Regulation is 35%.

What was the share of socially sustainable investments?

Socially sustainable investments represented 1% of the financial product.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The portion of “Others” includes cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes along with other amounts contributing to the total.

Any “#2 Other” potential investments, other than cash or cash equivalents are screened according to the Manager’s Exclusion Policy.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Manager has integrated various house ESG policies and procedures to ensure the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product, such as a Positive Screening, Fund Level ESG Scoring and Negative Screening have been implemented and are monitored regularly.

Furthermore, the Fund invested 36% of its assets in “sustainable investments” as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as “sustainable investment” are indicated in the above question *“What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives”*.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

How did this financial product perform compared to the reference benchmark?

- *How does the reference benchmark differ from a broad market index?*

Not applicable.

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable.

- *How did this financial product perform compared with the reference benchmark?*

Not applicable.

- *How did this financial product perform compared with the broad market index?*

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: FAM INVESTMENT GRADE EURO AGGREGATE BOND FUND

Legal entity identifier: 635400DX4FYP7WIXR06

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ____%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise stated, all actual data within this periodic report are calculated as quarterly average figures for 2024 (1 January 2024 – 31 December 2024).

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by this financial product included;

1. **Positive Screening:** Consideration of ESG factors was a key element of portfolio construction. The Manager determined how companies integrated environmental and/or social characteristics by analysing environmental and/or social ratings attributed to such companies with the exclusion of environmental and/or social “laggards” from the Fund’s investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supported a tilt towards investment in issuers that have a more positive impact on the environment or society at large.
2. **Fund Level ESG Scoring:** A monthly independent analysis and classification of the Fund’s ESG score was performed internally by the Manager. A minimum ESG score of “A” was applied at Fund Level to ensure that the Fund’s ESG score did not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control served to highlight a minimum Fund level ESG score and promoted engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social characteristics.
3. **Negative Screening (Norm-based exclusions):** The Manager applied norms-based exclusions based on its Exclusion Policy. Exclusion categories considered in the Exclusion Policy were:
 - United Nations Global Compact Principles
 - Controversial Weapons
 - Tobacco
 - Climate Change
 - Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

● ***How did the sustainability indicators perform?***

The following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund in 2024;

- i. The Fund level ESG score which was rated MSCI “A” or above in 2024;
- ii. The percentage of the Fund’s portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider) which was 99%; and
- iii. The percentage of the Fund investment universe subject to the Manager’s

exclusion policy which was 99%.

● **...and compared to previous periods?**

i.

Historical comparison of sustainability indicators	FY 2022	FY 2023	FY 2024
Fund level ESG score	A	A	A
The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider)	97 %	98 %	99%
The percentage of the Fund investment universe subject to the Manager's exclusion policy	97 %	98 %	99%

All actual data in 2022 are calculated on the closing date of the accounting year

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

Not applicable

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Manager considered principal adverse impacts of its investment decisions on sustainability factors on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators and as part of its investment decision making process and investment due diligence process and procedures. Principal adverse impacts were prioritized based on materiality relative to the objectives or characteristics of the Fund, provided that all minimum standards are met. The results were compared with that of a chosen proxy benchmark representative of the Fund’s investment universe and/or peers. These calculations formed the basis of assessment of adverse impacts on sustainability factors in order to determine what the Portfolio Managers could improve at Fund level and where the Portfolio Managers could engage with relevant issuers to improve on such indicators.

The specific PAI indicators that were taken into consideration for this product were;

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators: Environment

4. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators: Social

9. Lack of a human rights policy

Sovereign mandatory indicator:

15. GHG intensity
16. Investee countries subject to social violations

More detailed information on the manner in which the Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement; "*Statement on principal adverse impacts of investment decisions on sustainability factors*".

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes ☐ It made sustainable investments with an environmental objective: ____% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ It made sustainable investments with a social objective: ____%	☒ ☐ ☒ No ☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 38% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective ☐ It promoted E/S characteristics, but did not make any sustainable investments
---	---

Unless otherwise stated, all actual data within this periodic report are calculated as quarterly average figures for 2024(1 January 2024 – 31 December 2024).

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by this financial product included:

1. **Sustainable Investments:** The Fund partially invested in sustainable investments as defined as investment in companies and issuers that contribute to an environmental and/or social objective, while doing no significant harm. In 2024 the Fund had a proportion of 38% of sustainable investments.
2. **Positive Screening:** Consideration of ESG factors were a key element of portfolio construction. The Manager determined how companies integrated environmental and/or social characteristics by analysing environmental and/or social ratings attributed to such companies with the exclusion of environmental and/or social “laggards” from the Fund’s investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supports a tilt towards investment in issuers that have a more positive impact on the environment or society at large.
3. **Fund Level ESG Scoring:** A monthly independent analysis and classification of the Fund’s ESG score was performed internally by the Manager. A minimum ESG score of “A” was applied at Fund Level to ensure that the Fund’s ESG score did not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control served to highlight a minimum Fund level ESG score and promoted engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social Characteristics.

Negative Screening (Norm-based exclusions): The Manager applied norms-based exclusions based on its Exclusion Policy. Exclusion categories considered in the Exclusion Policy were:

- United Nations Global Compact Principles
- Controversial Weapons
- Tobacco
- Climate Change
- Forced Labour

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

● ***How did the sustainability indicators perform?***

The following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund:

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- i. The percentage of the Fund portfolio made in sustainable investments which was 38% in 2024;
- ii. The minimum Fund level ESG score which was AA- in 2024;
- iii. The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider) which was 99% for 2024; and
- iv. The percentage of the Fund investment universe subject to the Manager's exclusion policy which was 99% for 2024.

● ***...and compared to previous periods?***

Historical comparison of sustainability indicators	FY 2022	FY 2023	FY 2024
The percentage of the Fund portfolio made in sustainable investments	11%	40%	38%
The minimum Fund level ESG score which was A	AA	AA	AA-
The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider)	98%	99%	99%
The percentage of the Fund investment universe subject to the Manager's exclusion policy	98%	99%	99%

Please be informed that the difference between the percentages of sustainable investments disclosed between 2022 and 2023 mainly relies on an update to the third party data provider's sustainable investments calculation methodology which the Manager relies on as follow:

As of 7 June 2023, MSCI updated their Sustainable Investment calculation methodology. An extra metric has been added to the positive contribution category, that includes companies with a carbon emissions reduction target approved by the Science Based Targets initiative ("SBTi"). SBTi is a partnership between CDP, the United Nations Global Compact, the World Wildlife Fund for Nature (WWF) and the World Resources Institute (WRI). Other frameworks for measuring and comparing GHG reduction targets exist (including those developed by MSCI ESG Research), however, SBTi is currently the most commonly used framework to assess the aggressiveness of GHG emission reduction targets required under international treaties. As a result, the Manager implemented this new metric, into its sustainable investment calculation methodology.

Link to our published sustainable investments methodology:
<https://finecoassetmanagement.com/wp-content/uploads/2023/09/FINECO-AM-Sustainable-Investment-Methodology.pdf>

All actual data in 2022 are calculated on the closing date of the accounting year.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund made was to promote environmental and/or social characteristics. The Fund assessed issuers of the underlying security and classified investment in issuers that met the below criteria as sustainable investments inline with Article 2 (17) of SFDR:

- a. Made in investee companies that demonstrate good governance;
- b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
- c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund allocates between Underlying holdings with an environmental, and/or a social objective. The Fund did not favour any specific type of sustainable investment.

In 2024, the Fund had a proportion of 38% of sustainable investments.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its Exclusion Policy.

— — ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Principal adverse impact (“PAI”) indicators were calculated at portfolio level. The results were compared with that of a chosen proxy benchmark representative of the Fund’s investment universe and/or peers. These calculations are used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager could improve at Fund level and/or where the Manager could engage with relevant issuers to improve on such indicators.

The Fund considered the following principal adverse sustainability impacts indicators for the proportion of assets qualified as sustainable investments:

Corporate mandatory indicators;

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators - Environment;

15. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators - Social;

16. Lack of a human rights policy

Sovereign mandatory indicator;

17. GHG intensity
18. Investee countries subject to social violations

— — — *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments which the Fund made and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights were assessed in the following ways:

1. Via PAI monitoring of the following indicators;
 - Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises; and
 - Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises.
2. Through ensuring that the sustainable investments that the Manager made are:
 - a. Made in investee companies that demonstrate good governance;
 - b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
 - c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Manager considered principal adverse impacts of its investment decisions on sustainability factors on an ongoing basis by monitoring the Fund portfolio against

mandatory and additional PAI indicators and as part of its investment decision making process and investment due diligence process and procedures. Principal adverse impacts were prioritized based on materiality relative to the objectives or characteristics of the Fund, provided that all minimum standards are met. The results were compared with that of a chosen proxy benchmark representative of the Fund's investment universe and/or peers. These calculations formed the basis of assessment of adverse impacts on sustainability factors in order to determine what the Portfolio Managers could improve at Fund level and where the Portfolio Managers could engage with relevant issuers to improve on such indicators.

The specific PAI indicators that were taken into consideration for this product were:

Corporate mandatory indicators;

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators - Environment;

15. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators - Social;

16. Lack of a human rights policy

Sovereign mandatory indicator;

17. GHG intensity

18. Investee countries subject to social violations

More detailed information on the manner in which the Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement; "*Statement on principal adverse impacts of investment decisions on sustainability factors*".

What were the top investments of this financial product?

What was the proportion of sustainability-related investments?

38%

● What was the asset allocation?

99% of the Fund's Investments were aligned with the environmental and/or social characteristics promoted by the Fund. The Fund also commits to a minimum proportion of 5% in sustainable investments and in 2024 the Fund had a proportion of 38% of sustainable investments. The remaining investments of the Fund were invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. Calculations may rely on incomplete or inaccurate company or third party data.

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 to 31 December 2024

Historical comparison of the asset allocation for Article 8	FY 2022	FY 2023	FY 2024
#1 Aligned with E/S characteristics	98%	99%	99%
#2 Other	2%	1%	1%
#1A Sustainable	11%	40%	38%
#1B Other E/S characteristics	86%	59%	61%
Other environmental	8%	18%	37%
Social	7%	10%	1%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

 In which economic sectors were the investments made?

Sector	Total
Finance	58.29
Utilities	11.99
Consumer Non-Durables	3.87
Health Technology	3.60
Energy Minerals	2.79
Communications	2.69
Government	2.49
Miscellaneous	2.12
Producer Manufacturing	1.89
Technology Services	1.48
Cash	1.43
Process Industries	1.40
Commercial Services	1.29
Consumer Services	1.27
Industrial Services	1.14
Transportation	0.94
Consumer Durables	0.62
Retail Trade	0.50
Non-Energy Minerals	0.10
Health Services	0.07
Electronic Technology	0.04

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund’s portfolio alignment with the Taxonomy Regulation was not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy Regulation.

 Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change (“climate change mitigation”) and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In both 2022 and 2023, the share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that was not aligned with the European Taxonomy Regulation is 37%.

What was the share of socially sustainable investments?

Socially sustainable investments represented 1% of the financial product.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The portion of “Others” includes cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes along with other amounts contributing to the total.

Any “#2 Other” potential investments, other than cash or cash equivalents are screened according to the Manager’s Exclusion Policy.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Manager has integrated various house ESG policies and procedures to ensure the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product, such as a Positive Screening, Fund Level ESG Scoring and Negative Screening have been implemented and are monitored regularly.

Furthermore, the Fund invested 38% of its assets in “sustainable investments” as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as “sustainable investment” are indicated in the above question “*What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives*”.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did this financial product perform compared to the reference benchmark?

- **How does the reference benchmark differ from a broad market index?**

Not applicable.

- **How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?**

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: FAM GLOBAL EQUITIES INCOME FUND

Legal entity identifier: 54930082QJGJ9MRIP760

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective**: ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: ____%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 52% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise stated, all actual data within this periodic report are calculated as quarterly average figures for 2024 (1 January 2024– 31 December 2024).

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by this financial product included;

1. **Sustainable Investments:** The Fund partially invested in sustainable investments as defined as investment in companies and issuers that contribute to an environmental and/or social objective, while doing no significant harm. In 2024, the Fund had a proportion of 52% of sustainable investments
2. **Positive Screening:** Consideration of ESG factors was a key element of portfolio construction. The Manager determined how companies integrated environmental and/or social characteristics by analysing environmental and/or social ratings attributed to such companies with the exclusion of environmental and/or social “laggards” from the Fund’s investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supported a tilt towards investment in issuers that have a more positive impact on the environment or society at large.
3. **Fund Level ESG Scoring:** A monthly independent analysis and classification of the Fund’s ESG score was performed internally by the Manager. A minimum ESG score of “A” was applied at Fund Level to ensure that the Fund’s ESG score did not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control served to highlight a minimum Fund level ESG score and promoted engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social characteristics.
4. **Negative Screening (Norm-based exclusions):** The Manager applied norms-based exclusions based on its Exclusion Policy. Exclusion categories considered in the Exclusion Policy were:
 - United Nations Global Compact Principles
 - Controversial Weapons
 - Tobacco
 - Climate Change
 - Forced Labour

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

● ***How did the sustainability indicators perform?***

The following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund in 2024

;

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

- i. The percentage of the Fund portfolio made in sustainable investments which was 52%
- ii. The Fund level ESG score which was rated MSCI “AA-” or above in 2024;
- iii. The percentage of the Fund’s portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider) which was 98%; and
- iv. The percentage of the Fund investment universe subject to the Manager’s exclusion policy which was 98%

● *...and compared to previous periods?*

Historical comparison of sustainability indicators	FY 2022	FY 2023	FY 2024
The percentage of the Fund portfolio made in sustainable investments	0 %	54 %	52 %
Fund level ESG score	AA	AA	AA-
The percentage of the Fund’s portfolio rated above BB by MSCI ESG Manager (or an other corresponding rating from a similar rating provider)	97 %	98%	98%
The percentage of the Fund investment universe subject to the Manager’s exclusion policy	97 %	98%	98%

Please be informed that the difference between the percentages of sustainable investments disclosed between 2022 and 2023 mainly relies on an update to the third party data provider’s sustainable investments calculation methodology which the Manager relies on as follow:

As of 7 June 2023, MSCI updated their Sustainable Investment calculation methodology. An extra metric has been added to the positive contribution category, that includes companies with a carbon emissions reduction target approved by the Science Based Targets initiative (“SBTi”). SBTi is a partnership between CDP, the United Nations Global Compact, the World Wildlife Fund for Nature (WWF) and the World Resources Institute (WRI). Other frameworks for measuring and comparing GHG reduction targets exist (including those developed by MSCI ESG Research), however, SBTi is currently the most commonly used framework to assess the aggressiveness of GHG emission reduction targets required under international treaties. As a result, the Manager implemented this new metric, into its sustainable investment calculation methodology.

Link to our published sustainable investments methodology:
<https://finecoassetmanagement.com/wp-content/uploads/2023/09/FINECO-AM-Sustainable-Investment-Methodology.pdf>

All actual data in 2022 are calculated on the closing date of the accounting year

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments that the Fund made was to promote environmental and/or social characteristics. The Fund assessed issuers of the underlying security and classified investment in issuers that met the below criteria as sustainable investments inline with Article 2 (17) of SFDR;

- a. Made in investee companies that demonstrate good governance;
- b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
- c. Made in investee companies that make a positive contribution towards an environmental or social objective. The Fund allocated between underlying holdings with an environmental, and/or a social objective. The Fund did not favour any specific type of sustainable investment.

In 2024 , the Fund had a proportion of 52% of sustainable investments

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

The sustainable investments that the Fund made did not cause significant harm to any environmental or social sustainable investment objective based on screening applied by the Manager through its Exclusion Policy .

— — ***How were the indicators for adverse impacts on sustainability factors taken into account?***

Principal adverse impact (“PAI”) indicators were calculated at portfolio level. The results were compared with that of a chosen proxy benchmark representative of the Fund’s investment universe and/or peers. These calculations are used as the basis of assessment of adverse impacts on sustainability factors in order to determine whether the Manager could improve at Fund level and/or where the Manager could engage with relevant issuers to improve on such indicators.

The Fund considered the following principal adverse sustainability impacts indicators for the proportion of assets qualified as sustainable investments:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators: Environment

4. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators: Social

9. Lack of a human rights policy

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

The sustainable investments which the Fund made and their alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights were assessed in the following ways;

1. Via PAI monitoring of the following indicators;

- Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises

- Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises

2. Through ensuring that the sustainable investments that the Manager made are:

- a. Made in investee companies that demonstrate good governance:
- b. Made in a manner that demonstrates that they do no significant harm to other environmental objectives; and
- c. Made in investee companies that make a positive contribution towards an environmental or social objective.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Manager considered principal adverse impacts of its investment decisions on sustainability factors on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators and as part of its investment decision making process and investment due diligence process and procedures. Principal adverse impacts were prioritized based on materiality relative to the objectives or characteristics of the Fund, provided that all minimum standards are met. The results were compared with that of a chosen proxy benchmark representative of the Fund’s investment universe and/or

peers. These calculations formed the basis of assessment of adverse impacts on sustainability factors in order to determine what the Portfolio Managers could improve at Fund level and where the Portfolio Managers could engage with relevant issuers to improve on such indicators.

The specific PAI indicators that were taken into consideration for this product were;

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas
8. Emissions to water
9. Hazardous waste ratio
10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
12. Unadjusted gender pay gap
13. Board gender diversity
14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators: Environment

4. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators: Social

9. Lack of a human rights policy

More detailed information on the manner in which the Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of

the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement; "*Statement on principal adverse impacts of investment decisions on sustainability factors*".

What were the top investments of this financial product?

Name of Investment	Port. Average Weight %	Sector	Country
Microsoft Corporation	2.75	Systems Software	United States
Merck & Co., Inc.	1.76	Pharmaceuticals	United States
S&P Global, Inc.	1.59	Financial Exchanges & Data	United States

Asset allocation describes the share of investments in specific assets.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 – 31 December 2024

What was the proportion of sustainability-related investments?

52%

● **What was the asset allocation?**

98% of the Fund's Investments were aligned with the environmental and/or social characteristics promoted by the Fund. The Fund also commits to a minimum proportion of 10% in sustainable investments and as at 31 December the Fund had a proportion of 52% of sustainable investments. The remaining investments of the Fund were invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. Calculations may rely on incomplete or inaccurate company or third party data.

Historical comparison of the asset allocation for Article 8	FY 2022	FY 2023	FY 2024
#1 Aligned with E/S characteristics	97%	98%	98%
#2 Other	3%	2%	2%
#1A Sustainable	0%	54%	52%
#1B Other E/S characteristics	97%	44%	47%
Other environmental	6%	14%	48%
Social	18%	18%	3%

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

As the investments underlying this Fund do not take into account the EU criteria for environmentally sustainable economic activities within the meaning of the Taxonomy Regulation, the Fund's portfolio alignment with the Taxonomy Regulation was not calculated. It follows that the Fund does not currently commit to investing more than 0% of its assets in investments aligned with the Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In 2022, the share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that was not aligned with the European Taxonomy Regulation is 48%.

What was the share of socially sustainable investments?

Socially sustainable investments represented 3% of the financial product.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The portion of “Others” includes cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes along with other amounts.

Any “#2 Other” potential investments, other than cash or cash equivalents are screened according to the Manager’s exclusion policy.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Manager has integrated various house ESG policies and procedures to ensure the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product, such as a Positive Screening, Fund Level ESG Scoring and Negative Screening have been implemented and are monitored regularly.

Furthermore, the Fund invested 52% of its assets in “sustainable investments” as defined in Article 2 (17) of SFDR. Criteria to qualify an investment as “sustainable investment” are indicated in the above question *“What were the objectives of the sustainable investments that the financial product partially intends to make and does the sustainable investments contribute to such objectives?”*.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did this financial product perform compared to the reference benchmark?

- ***How does the reference benchmark differ from a broad market index?***

Not applicable

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

- ***How did this financial product perform compared with the reference benchmark?***

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
☒ ☐ ☐ Yes ☐ It made sustainable investments with an environmental objective: _____ % ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ It made sustainable investments with a social objective: _____ %	☒ ☐ ☒ No ☐ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of _____ % of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective ☒ It promoted E/S characteristics, but did not make any sustainable investments

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund applied, in addition to the regulatory mandated exclusions with regards to controversial weapons and sovereign debt sanctions, additional exclusions based on the following factors:

- Level of involvement in Coal extraction and production.
- Level of involvement in Unconventional Oil and Gas such as arctic oil and gas exploration extraction, oil sands extraction and Shale Energy extraction.
- Level of involvement in Tobacco production and tobacco related products.
- Level of involvement with recreational cannabis.
- Companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the Non-Proliferation Treaty.

In addition, companies were excluded if they were assessed as being in violation of any of the UN Global Compact’s principles, based on third parties’ data and the Investment Manager’s proprietary analysis and research.

The reference period for data reported in this document was from the 1st of January 2024 to the 31st of December 2024. The data is representative of the reference period unless specified otherwise.

How did the sustainability indicators perform?

The Fund used a variety of indicators to measure the attainment of the environmental and social

characteristics. This included:

Sustainability Indicator	Indicator description	Indicator performance
Exclusions with regards to controversial weapons	Companies involved in the manufacture of nuclear warheads or whole nuclear missiles outside of the Non-Proliferation Treaty	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Exclusions with regards to sovereign debt sanctions	Sovereign issuers with a non-satisfactory score for the Internal ESG Qualitative Review were excluded	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Level of involvement in Coal extraction and production.	Companies that generate $\geq 5\%$ of revenue from thermal coal extraction or $\geq 10\%$ of revenue from Thermal Coal Power Generation were excluded	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Level of involvement in Unconventional Oil and Gas such as arctic oil and gas exploration, oil sands extraction, and Shale Energy extraction;	Companies that generate $\geq 5\%$ of revenue from unconventional Oil and Gas were excluded (i.e. arctic oil & gas exploration, oil sands extraction, or shale energy extraction)	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Level of involvement in Tobacco production and tobacco related products;	Companies that generate $\geq 5\%$ of revenue from Tobacco products production or Tobacco related products and services were excluded Companies that generate $\geq 15\%$ of revenue from Tobacco Products Overall were excluded	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Level of involvement with recreational cannabis;	Companies that generate $\geq 5\%$ of their revenue from recreational cannabis were excluded	During the reference period, there were no active breaches of the Fund's exclusion criteria.
Companies excluded as being in violation of any UN Global Compact's principles	All non-compliant companies were excluded	During the reference period, there were no active breaches of the Fund's exclusion criteria.

● **...and compared to previous periods?**

As per the previous year, the Fund was managed with no breaches to the exclusions set out above.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

NA

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

NA

How were the indicators for adverse impacts on sustainability factors taken into account?

NA

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Fund considered principal adverse impacts on sustainability factors by carrying out a qualitative and quantitative review of key metrics (being the mandatory indicators defined in Table 1 of the Annex I of the regulatory technical standards for SFDR and any applicable additional indicators). The Fund identified priority investee entities using thresholds on each principal adverse impacts indicator and engaged through methods such as letters, meetings, proxy voting. If no improvement was established through such corporate engagement, then the Fund proceeded to divest and/or exclude investments.

The below table shows the fund level PAI scores.

Adverse sustainability indicator	PAI	Data	Metric
Greenhouse gas emissions	1.GHG Emissions	6,672.98	Scope 1 fund financed emissions (Tonnes of CO2 equivalent)
		896.02	Scope 2 fund financed emissions (Tonnes of CO2 equivalent)
		31,257.11	Scope 3 fund financed emissions (Tonnes of CO2 equivalent)
		38,826.10	Total Financed emissions (Scope 1 + Scope 2 + Scope 3) (Tonnes of CO2 equivalent)
	2. Carbon footprint	351.94	Fund level Carbon footprint (Scope 1 + Scope 2 + Scope 3) (Per Million EUR Invested)
	3. GHG Intensity of investee companies	1,218.50	Fund level Total Emission Intensity- Scope 1+2+3 (Per Million EUR Revenue)
	4. Exposure to companies active in the fossil fuel sector	0.00	% of the fund exposed to any fossil fuels revenue
	5. Share of non-renewable energy consumption	54.59	Adjusted Weighted Average of all issuers in the fund's share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources (%)
	5. Share of non-renewable energy production	37.07	
	6. Energy consumption intensity per high impact climate sector		
	Agriculture, Forestry & Fishing	0.00	
	Construction	0.00	
	Electricity, Gas, Steam & Air Conditioning Supply	3.17	
	Manufacturing	0.35	
	Mining & Quarrying	0.81	
	Real Estate Activities	0.92	
	Transportation & Storage	0.03	
	Water Supply, Sewerage, Waste Management & Remediation Activities	0.00	
	Wholesale & Retail Trade & Repair of Motor Vehicles & Motorcycles	0.04	
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	2.66	Share of investments in the fund of investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas
Water	8. Emissions to water	0.00	Adjusted weighted average per issuer in the fund's emissions to water generated by investee companies per million EUR invested (Tonnes)
Waste	9. Hazardous waste and radioactive waste ratio	0.47	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average
Social and employee matters	10. Violations of UN Global Compact principles and	0.00	Share of investments in investee companies that have been involved in violations of the

	Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises		UNGC principles or OECD Guidelines for Multinational Enterprises
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	14.01	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/ complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises
	12. Unadjusted gender pay gap	27.62	Weighted Average of all issuers' in the portfolio unadjusted gender pay gap of investee companies
	13. Board gender diversity	39.58	Weighted Average of all issuers in the portfolio ratio of female to male board members in investee companies, expressed as a percentage of all board members
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	0.00	Share of investments in investee companies involved in the manufacture or selling of controversial weapons

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: From the 1st of January 2024 to the 31st of December 2024. The data is representative of the reference period.

Largest Investments	Sector	% Assets	Country
US TREASURY N/B	Sovereign	7.88%	United States

What was the proportion of sustainability-related investments?

NA

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

95.70% of the Fund's portfolio was aligned with the environmental and or social characteristics (on average over the reference period). 4.30% of the portfolio was Cash & Derivatives and was not aligned with the environmental and or social characteristics, on average over the reference period.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

● **In which economic sectors were the investments made?**

The below table shows the sectors that the fund holdings are invested in:

Sector (GICS)	Weight %
Financials	20.60
Communication Services	5.99
Consumer Discretionary	3.14
Information Technology	1.05
Industrials	0.20
Consumer Staples	4.08
Energy	1.66
Real Estate	2.11
Health Care	1.53
Materials	0.25
Utilities	3.62
Sovereign	51.47
Cash	4.30
Total	100.00

Level 4 breakdown for Energy Sector

Sub-Industry Code	Sub-Industry Name	Weight
10101010	Oil & Gas Drilling	0.00
10101020	Oil & Gas Equipment & Services	0.00
10102010	Integrated Oil & Gas	1.11
10102020	Oil & Gas Exploration & Production	0.31
10102030	Oil & Gas Refining & Marketing	0.24
10102040	Oil & Gas Storage & Transportation	0.00
10102050	Coal & Consumable Fuels	0.00
Total		1.66

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:
- **turnover** reflecting the share of revenue

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

0% of the Fund's portfolio was aligned with the EU Taxonomy.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ **Yes**
- ☐ **In fossil gas** ☐ **In nuclear energy**
- ☒ **No**

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

from green activities of investee companies.

- **capital expenditure (CapEx)** shows the green investments made by investee companies, relevant for a transition to a green economy.

- **operational expenditure (OpEx)** reflects the green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

What was the share of investments made in transitional and enabling activities?

NA

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

NA

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

NA

What was the share of socially sustainable investments?

NA

What investments were included under "other", what was their purpose and were there any minimum environmental or social safeguards?

"#2 Other" investments include the remaining investments which were neither aligned with the environmental and social characteristics, nor are qualified as sustainable investments. They were investments that were treated as neutral, such as cash and money market instruments and derivatives used with the aim of reducing risk (hedging) or efficient portfolio management purposes. They may have been excluded from the Sub-Fund's ESG exposure calculation.

-4.30% reflects Cash & Derivatives for the whole portfolio on average over the reference period.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

See Second Question of the Report.

How did this financial product perform compared to the reference benchmark?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

NA

- *How does the reference benchmark differ from a broad market index?*

NA

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

NA

- *How did this financial product perform compared with the reference benchmark?*

NA

- *How did this financial product perform compared with the broad market index?*

NA

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Nordea Stable Performance FAM Fund
Legal entity identifier: 549300NRHNS6GWUSXS14

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 63 % of sustainable investments

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The E/S characteristics promoted could be environmental and/or social and included the following features:

Sustainable investments Although the product has not committed to make any sustainable investments, the product promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

Sector- and value-based exclusions The product promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

Nordea Asset Management's Paris-Aligned Fossil Fuel Policy The product promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the product was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the product.

How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint Scope 1+2	18 tCO ₂ e / m€ invested	91,88 %	91,86 %
	Carbon footprint Scope 1+2+3	134 tCO ₂ e / m€ invested	91,88 %	91,86 %
Investee countries subject to social violations (absolute and relative)	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	2,17 %	2,07 %
		0,00 % investee countries subject to violations	2,17 %	2,07 %

Coverage: The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● ***What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?***

The objective of the sustainable investments that the product partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

As part of the process to identify sustainable investments, companies were screened to ensure that they did not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

How were the indicators for adverse impacts on sustainability factors taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this product were:

CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	3.095 tCO2e	91,88 %	91,86 %
		Scope 2 GHG emissions	1.278 tCO2e	91,88 %	91,86 %

		Water supply sewerage waste management and remediation activities (E)	0,55 GWh / m€ of revenue	0,71 %	0,71 %
		Construction (F)	0,15 GWh / m€ of revenue	1,19 %	1,19 %
		Wholesale and retail trade repair of motor vehicles and motorcycles (G)	0,07 GWh / m€ of revenue	7,60 %	7,59 %
		Transportation and storage (H)	0,00 GWh / m€ of revenue	0,21 %	0,21 %
		Real estate activities (L)	0,00 GWh / m€ of revenue	0,00 %	0,00 %
Biodiversity	Activities negatively affecting biodiversity-sen sitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitiv e areas	2,79 % with negative impact	91,88 %	91,48 %
Water	Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0,00 tons / m€ invested	91,88 %	0,96 %
Waste	Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0,48 tons / m€ invested	91,88 %	88,56 %

**SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION
AND ANTI-BRIBERY MATTERS**

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	2,71 % involved in violations	91,88 % 91,85 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,02 % without policies	91,88 % 91,45 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	8,16 % pay gap	91,88 % 53,52 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	36,27 % (female directors / total directors)	91,88 % 90,34 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00 % involvement	91,88 % 90,73 %

INDICATORS APPLICABLE TO INVESTMENTS IN SOVEREIGNS AND SUPRANATIONAL

Adverse Sustainability Indicator		Metric	Metric Value	Eligibility	Coverage
Environmental	GHG Intensity for sovereigns	GHG intensity of investee countries	343,52 tCO2e / m€ of GDP	2,17 %	2,17 %
Social	Investee countries subject to social violations	Number of investee countries subject to social violations (absolute number and relative number divided by all investee countries), as referred to in international treaties and conventions, United Nations principles and, where applicable, national law	0 investee countries subject to violations	2,17 %	2,07 %
			0,00 % investee countries subject to violations	2,17 %	2,07 %
Governance	Non-cooperative tax jurisdictions	Investments in jurisdictions on the EU list of non-cooperative jurisdictions for tax purposes	0,00 % investee countries subject to violations	2,17 %	2,17 %

Eligibility: The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

Coverage: The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
1 January 2024 - 31 December 2024

Largest investments	Sector	Assets	Country
Alphabet	Communications	4,43 %	United States
Microsoft	Technology	4,02 %	United States
Automatic Data Processing	Consumer, Non-cyclical	2,55 %	United States
Novo Nordisk B	Consumer, Non-cyclical	2,25 %	Denmark
Coca-Cola	Consumer, Non-cyclical	2,17 %	United States
Visa	Financial	2,16 %	United States
Johnson & Johnson	Consumer, Non-cyclical	1,98 %	United States
PepsiCo	Consumer, Non-cyclical	1,73 %	United States

Mastercard	Financial	1,61 %	United States
Starbucks	Consumer, Cyclical	1,56 %	United States
Accenture	Technology	1,55 %	Ireland
Monster Beverage	Consumer, Non-cyclical	1,49 %	United States
NIKE	Consumer, Cyclical	1,48 %	United States

What was the proportion of sustainability-related investments?

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☒ Yes:

☐ In fossil gas

☒ In nuclear energy

☐ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0,01 %
Enabling activities	0,45 %
Sum	0,46 %

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2024	1,36 %
2023	0,00 %
2022	0,00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 48 %.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 57 %.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The product may have used derivatives and other techniques for the purposes described in the investment guidelines. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product have been monitored and documented on an ongoing basis.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: FINECO AM EURO CREDIT BOND FUND

Legal entity identifier: 635400SKB7Q3DB2CUM45

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

Yes

It made **sustainable investments with an environmental objective:** ____%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective:** ____%

No

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

Unless otherwise stated, all actual data within this periodic report are calculated as quarterly average figures for 2024 (1 January 2024 – 31 December 2024).

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by this financial product included;

1. **Positive Screening:** Consideration of ESG factors was a key element of portfolio construction. The Manager determined how companies integrated environmental and/or social characteristics by analysing environmental and/or social ratings attributed to such companies with the exclusion of environmental and/or social “laggards” from the Fund’s investment portfolio. By incorporating positive environmental and/or social factors as part of the overall portfolio construction process, the Fund through its investments supported a tilt towards investment in issuers that have a more positive impact on the environment or society at large.
2. **Fund Level ESG Scoring:** A monthly independent analysis and classification of the Fund’s ESG score was performed internally by the Manager. A minimum ESG score of “A” was applied at Fund Level to ensure that the Fund’s ESG score did not fall below a level deemed by the Manager to be appropriate for a fund promoting environmental and/or social characteristics. This additional control served to highlight a minimum Fund level ESG score and promoted engagement and challenge of portfolio managers to select more positive issuers, demonstrating better environmental and/or social characteristics.
3. **Negative Screening (Norm-based exclusions):** The Manager applied norms-based exclusions based on its Exclusion Policy. Exclusion categories considered in the Exclusion Policy were:
 - United Nations Global Compact Principles
 - Controversial Weapons
 - Tobacco
 - Climate Change
 - Forced Labour

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

● ***How did the sustainability indicators perform?***

The following sustainability indicators were used to measure the attainment of the environmental and social characteristics promoted by the Fund in 2024;

- i. The Fund level ESG score which was rated MSCI “AA” or above in 2024;
- ii. The percentage of the Fund’s portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider) which was 98%; and
- iii. The percentage of the Fund investment universe subject to the Manager’s

exclusion policy which was 98%

● **...and compared to previous periods?**

i.

Historical comparison of sustainability indicators	FY 2022	FY 2023	FY 2024
The Fund level ESG score	AA	AA	AA
The percentage of the Fund's portfolio rated above BB by MSCI ESG Manager (or another corresponding rating from a similar rating provider)	94%	98%	98%
The percentage of the Fund investment universe subject to the Manager's exclusion policy	94%	98%	98%

All actual data in 2022 are calculated on the closing date of the accounting year

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

Not applicable

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

Not applicable

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Manager considered principal adverse impacts of its investment decisions on sustainability factors on an ongoing basis by monitoring the Fund portfolio against mandatory and additional PAI indicators and as part of its investment decision making process and investment due diligence process and procedures. Principal adverse impacts were prioritized based on materiality relative to the objectives or characteristics of the Fund, provided that all minimum standards are met. The results were compared with that of a chosen proxy benchmark representative of the Fund’s investment universe and/or peers. These calculations formed the basis of assessment of adverse impacts on sustainability factors in order to determine what the Portfolio Managers could improve at Fund level and where the Portfolio Managers could engage with relevant issuers to improve on such indicators.

The specific PAI indicators that were taken into consideration for this product were;

Corporate mandatory indicators:

1. GreenHouse Gas (GHG) Emissions
2. Carbon footprint
3. GHG intensity of investee companies
4. Exposure to companies active in the fossil fuel sector
5. Share of non-renewable energy consumption and production
6. Energy consumption intensity per high impact climate sector
7. Activities negatively affecting biodiversity sensitive areas

- 8. Emissions to water
- 9. Hazardous waste ratio
- 10. Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- 11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises
- 12. Unadjusted gender pay gap
- 13. Board gender diversity
- 14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)

Corporate voluntary indicators: Environment

- 4. Investments in companies without carbon emission reduction initiatives Social

Corporate voluntary indicators: Social

- 9. Lack of a human rights policy

Sovereign mandatory indicator:

- 15. GHG intensity
- 16. Investee countries subject to social violations

More detailed information on the manner in which the Manager considers principal adverse impacts of investment decisions on sustainability factors taking due account of the size, the nature and scale of its activities and the types of financial products managed can be found in the Investment Manager's SFDR disclosure statement; "*Statement on principal adverse impacts of investment decisions on sustainability factors*".

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1 January 2024 – 31 December 2024

What was the proportion of sustainability-related investments?

Not applicable

● What was the asset allocation?

98% of the Fund's Investments were aligned with the environmental and/or social characteristics promoted by the Fund. The remaining investments of the Fund were invested in cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes. Calculations may rely on incomplete or inaccurate company or third party data.

Historical comparison of the asset allocation for Article 8	FY 2022	FY 2023	FY 2024
#1 Aligned with E/S characteristics	94%	98%	98%
#2 Other	6%	2%	2%

Asset allocation

describes the share of investments in specific assets.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **In which economic sectors were the investments made?**

Sector	Total %
Finance	48.50
Utilities	16.45
Consumer Non-Durables	7.65
Communications	3.38
Health Technology	4.03
Non-Energy Minerals	2.63

[Cash]	2.24
Government	0.24
Technology Services	1.09
Commercial Services	0.11
Retail Trade	0.64
Consumer Services	0.08
Electronic Technology	0.04

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Not applicable

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

In both 2022 and 2023, the share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulations was 0% for transitional activities and 0% for enabling activities.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

Not applicable

What was the share of socially sustainable investments?

Not applicable

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The portion of “Others” includes cash and cash equivalents for liquidity purposes and derivatives which may be used for investment, risk reduction and hedging purposes along with other amounts.

Any “#2 Other” potential investments, other than cash or cash equivalents are screened according to the Manager’s exclusion policy.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Manager has integrated various house ESG policies and procedures to ensure the binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product, such as a Positive Screening, Fund Level ESG Scoring and Negative Screening have been implemented and are monitored regularly.

No reference benchmark was designated for the purpose of attaining the environmental or social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

How did this financial product perform compared to the reference benchmark?

- *How does the reference benchmark differ from a broad market index?*
Not applicable
- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*
Not applicable
- *How did this financial product perform compared with the reference benchmark?*
Not applicable
- *How did this financial product perform compared with the broad market index?*
Not applicable

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: M&G Flexible Income FAM Fund
 Legal entity identifier: 6354006DDRFMHMEOVV17

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
☒ ☐ Yes	☐ ☒ No
☐ It made sustainable investments with an environmental objective : ____% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ It made sustainable investments with a social objective: ____%	☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 36.66% of sustainable investments ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective ☐ It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach (as defined below):

The Fund excluded certain potential investments from its investment universe based on the following ESG criteria (the “ESG Criteria”) to mitigate potential negative effects on the environment and society (the “Exclusionary Approach”).

In this regard, the Fund applied norms-based exclusions, whereby an investment that is assessed to be in breach of the Investment Manager’s good governance tests , as well as any company that is assessed to be in breach of the UNGC principles on human rights, labour, environment protection

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

and anti-corruption, is excluded. Sector-based exclusions comprise of the Investment Manager’s application of its thermal coal investment policy, while the fossil fuels exclusions test excludes companies that derive a certain percentage of revenues from the extraction of thermal coal, conventional and unconventional oil and gas extraction and carbon-intensive power generation. Social exclusions exclude companies that derive a certain percentage of revenues from adult entertainment, gambling, tobacco, controversial weapons and defence and other weapons. Where such exclusions apply, revenues are tested against the threshold set out for the relevant exclusion. For securitised investments such as asset-backed securities (ABS), this also includes assessing them against the Investment Manager’s proprietary scoring methodology. In respect of government bonds, the relevant government is assessed for factors indicating its social progress, with lower scoring governments being excluded, and governments that pass the social tests being subject to further tests to assess their environmental credentials. By applying its Exclusionary Approach, the Investment Manager is promoting environmental and/or social characteristics by excluding certain investments that are considered to be detrimental to ESG Factors. Investment Manager’s good governance tests, as well as any company that is assessed to be in breach of the UNGC principles on human rights, labour, environment protection and anti-corruption, is excluded. Sector-based exclusions comprise of the Investment Manager’s application of its thermal coal investment policy, while the fossil fuels exclusions test excludes companies that derive a certain percentage of revenues from the extraction of thermal coal, conventional and unconventional oil and gas extraction and carbon-intensive power generation. Social exclusions exclude companies that derive a certain percentage of revenues from adult entertainment, gambling, tobacco, controversial weapons and defence and other weapons. Where such exclusions apply, revenues are tested against the threshold set out for the relevant exclusion. For securitised investments such as asset-backed securities (ABS), this also includes assessing them against the Investment Manager’s proprietary scoring methodology. In respect of government bonds, the relevant government is assessed for factors indicating its social progress, with lower scoring governments being excluded, and governments that pass the social tests being subject to further tests to assess their environmental credentials. By applying its Exclusionary Approach, the Investment Manager is promoting environmental and/or social characteristics by excluding certain investments that are considered to be detrimental to ESG Factors.

No reference benchmark has been designated for the purpose of attaining the Fund’s promoted environmental and/or social characteristics.

The promoted environmental and social characteristics were generally met by all investments made for the Fund other than "Other" Investments. The alignment percentage indicated in the graphic below is tested against the Exclusionary Approach described below, showing the allocation between investments complying with the Exclusionary Approach and Investments which we as deem as "Other" as we don’t consider they can be considered as aligned against the Exclusionary Approach as described in the precontractual annex, such as cash.

● **How did the sustainability indicators perform?**

Exclusionary Approach: The Fund's sustainability indicators to test its compliance with its Exclusionary Approach were met most of the time during the reporting period. There was one inadvertent breach where the Fund held security SVITZER GROUP, which is not permitted under our internal screening rules. Trades were carried out to bring the fund back into compliance.

● **...and compared to previous periods?**

The Fund is not yet able to provide comparison to a previous reporting period as this is the Fund's first SFDR Level 2 Periodic Report disclosure. A historic comparison will be provided in the next Periodic Report.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Whilst the Fund does not commit to invest in sustainable investments, it can nonetheless allocate to sustainable investments of any type, i.e., investments with an environmental and/or social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager uses a series of proprietary tests based on available data to determine whether and how an investment makes positive contribution(s) towards environmental and social objectives.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective as they are required to pass a series of tests, including:

- 1. Whether they represent significant exposure to businesses the Investment Manager considers harmful*
- 2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)*
- 3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures are compatible with sustainable investment*

— — **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

All investments purchased by the Fund must pass the Investment Manager's good governance tests, and in addition, sustainable investments must also pass tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1st January 2024 to 31 December 2024

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

What were the top investments of this financial product? *Please note that the Investment Manager identifies separate company issues when compiling this table of Top 15 holdings rather than grouping issuers at a company (issuer) level.*

Largest Investments	Sector	% Assets	Country

Asset Allocation
describes the
share of
investments in
specific assets.

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund has committed to a minimum of 70% of the Fund's assets to be aligned to the environmental or social characteristics promoted. This includes a minimum 20% of the assets that are qualified as sustainable investments. A minimum of 0% of the Fund's assets are other investments not aligned to the environmental or social characteristics.

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). Actual % investments that were aligned to the environmental or social characteristic promoted was 97.73% of NAV as at 31 December 2024, which is above the 70% minimum commitment. This comprised 36.66% NAV relating to sustainable investments which was above the 20% minimum threshold, and the remaining 61.08% NAV related to investments with other environmental and or social characteristics.

● What was the asset allocation?

The graphic below provides an overview of the asset allocation versus the established minimum thresholds.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made?*

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic Sector	% of Assests
Public Administration and Defence; Compulsory Social Security	35.002%
Manufacturing	31.106%
Financial And Insurance Activities	13.179%
Information And Communication	7.972%
Activities Of Extraterritorial Organisations and Bodies	3.871%

Human Health and Social Work Activities	0.767%
Construction	0.468%
Administrative And Support Service Activities	0.381%
Accommodation And Food Service Activities	0.080%
Water Supply; Sewerage, Waste Management and Remediation Act	0.033%
Unallocated	-1.340%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The Fund held 0.22 % in Taxonomy-aligned sustainable investments during the reference period. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the "greenness" of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are

activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

What was the share of investments made in transitional and enabling activities?

The share of the Fund's investments made in transitional activities over the period was 0.01% and in enabling activities was 0.37%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The Fund is not yet able to provide comparison to a previous reporting period as this is the Financial Product's first SFDR Level 2 Periodic Report disclosure. A historic comparison will be provided in the next Periodic Report.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments in the Fund with an environmental objective not aligned with the EU taxonomy over the period was 19.14%. This compares to the commitment of 5% overall of sustainable investments with environmental objectives that were not aligned to the EU Taxonomy made in the precontractual disclosure.

What was the share of socially sustainable investments?

The share of sustainable investments in the Fund with a social objective over the period was 17.30%. This compares to the commitment of 5% overall of socially sustainable investments made in the precontractual disclosure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Fund held varying levels of cash, in accordance with the purposes and safeguards explained in the precontractual annex.

The Fund may hold cash, near cash and money market funds and derivatives as “Other” investments, for any purpose permitted by the Fund’s investment policy. No minimum environmental or social safeguards are applied, other than as set out below.

Derivatives used to take investment exposure to diversified financial indices, and funds (i.e. UCITS and other UCIs) may be held for any reason permitted by the Fund’s investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test. No minimum environmental or social safeguards are applied to FX derivatives.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments’ alignment with the promoted characteristics.

It is also possible that the Fund may hold investments that are not in line with the promoted characteristics,

e.g. as a result of a merger or other corporate action, or as a result of the characteristics of a previously acquired investment changing. Where this happens, the Fund will generally seek to dispose of them in the best interests of investors, but may not always be able to do so immediately.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund applied an exclusion policy to achieve its Exclusionary Approach. Its compliance with the same is reported in the sustainability indicators section above.

How did this financial product perform compared to the reference benchmark?

- **How does the reference benchmark differ from a broad market index?**

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

- ***How did this financial product perform compared with the reference benchmark?***

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

- ***How did this financial product perform compared with the broad market index?***

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Fidelity Sustainable Water & Waste FAM Fund **Legal entity identifier:** 2549002N1GC1ZSIQ9R66

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ Yes	☒ ☐ No
☐ It made sustainable investments with an environmental objective: ____% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 66.75% of sustainable investments ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective
☐ It made sustainable investments with a social objective: ____%	☐ It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favorable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The Fund partially made sustainable investments.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

● *How did the sustainability indicators perform?*

The performance of the sustainability indicators the Fund used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of December 2022 was:

1. 93.24% of the Fund was invested in securities of issuers with favorable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 66.75% of the Fund was invested in sustainable investments.
4. 6.49% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy).
5. 41.83% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
6. 18.44% of the Fund invested in sustainable investments with a social objective.

● *...and compared to previous periods?*

During the prior reference period the fund was invested

1. 92% of the Fund was invested in securities of issuers with favorable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 59% of the Fund was invested in sustainable investments.
4. 4.35% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that qualify as environmentally sustainable under the EU Taxonomy);
5. 30% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy);
6. 24% of the Fund invested in sustainable investments with a social objective.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While it did not have as its objective a sustainable investment, it had a proportion of 66.75% of sustainable investments. The sustainable investments had an environmental and social objective. The Fund determined a sustainable investment as follows:

a) issuers that undertake economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with

EU Taxonomy. This contributed towards the climate change mitigation environmental EU Taxonomy objective; or

(b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals (“SDGs”); or

(c) issuers which set a decarbonization target consistent with a 1.5-degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

The SDGs are a series of goals published by the United Nations which recognize that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet’s oceans and forests. For further details see the UN website . Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This Included: Norms-based screens - the screening out of securities identified under Fidelity’s existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a ‘Very Severe’ controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labor rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators were used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available). Issuers with a low overall score were ineligible to be ‘sustainable investments’ unless Fidelity’s fundamental research determined that the issuer was not breaching “do no significant harm” requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens were applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labor, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labor Organization (ILO) Conventions, were not considered sustainable investments.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/01/2024 - 31/12/2024

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

1. Due Diligence - analysis of whether principle adverse impacts were material and negative.
2. ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
3. Exclusions - Fidelity adopted a principles-based approach to ESG matters and as part of this they place companies which we regard as unsuitable investments on an Exclusion List, including but not limited to the following; a firm-wide exclusions list, that includes biological weapons, chemical weapons, the use of stock piling, production and transfer of anti-personnel mines, the treaty of non-proliferation of nuclear weapons and guidance from the UN, World Bank and other global authorities upholding ESG principles.
4. Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e., Climate Action 100+, Investors Against Slavery and Trafficking APAC).
5. Voting - Fidelity’s voting policy included explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.
6. Quarterly reviews monitoring of principal adverse impacts through the Fund’s quarterly review process.

Fidelity takes into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators are subject to data availability and may evolve with improving data quality and availability. The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: "[Sustainable investing framework](#)".

What were the top investments of this financial product?

Largest investments	Sector	% Assets	Country

The following data has been compiled as of December 31st 2024. Classification of securities including Sector and Country are determined as at the last day of the reference period. (December 31st 2024) This data includes all securities, excluding derivatives.

What was the proportion of sustainability-related investments?

The Fund invested 66.75% in sustainable investments for the period in review

Asset allocation describes the share of investments in specific assets.

What was the asset allocation?

(#1 aligned with E/S characteristics) The Fund invested in:

- 93.24% of its assets in securities of issuers with favorable ESG characteristics.
- 66.75% in sustainable investments (#1A sustainable) of which 6.49% have an environmental objective (which is aligned with the EU Taxonomy), 41.83% have an environmental objective (which is not aligned with the EU Taxonomy), 18.44% have a social objective.

(#1B Other E/S characteristics) Includes securities of issuers with favorable ESG characteristics but are not sustainable investments.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Information Technology	Not applicable	7.36%
Utilities	Not applicable	18.86%
Industrials	Not applicable	54.08%
Materials	Not applicable	13.85%
Consumer Discretionary	Not applicable	1.13%
Futures and Options	Not applicable	0.61%
Health Care	Not applicable	2.90%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund invested 6.49% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?**

☐ Yes:

☒ In fossil gas ☐ In nuclear energy

☐ No

The two graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The following data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. The EU taxonomy figures disclosed may differ due to differences in the calculation methodology applied

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.16% for transitional activities and 0.99% for enabling activities, measured by Turnover

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 5.5% based on Turnover, 0.9% based on CapEx and 0.9% based on OpEx.

The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 5.5% based on Turnover, 0.9% based on CapEx and 0.9% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund invested 41.83% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund invested 18.44% in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period, and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilized their spheres of influence on companies via active engagement and stewardship activities.

How did this financial product perform compared to the reference benchmark?

Not applicable

- *How does the reference benchmark differ from a broad market index?*

Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

- *How did this financial product perform compared with the reference benchmark?*

Not applicable

- *How did this financial product perform compared with the broad market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Product name: **JPMorgan China A-Shares Opportunities FAM Fund**

Legal entity identifier: **254900X39YSDFXAY5889**

Environmental and/or social characteristics

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Did this financial product have a sustainable investment objective?

Yes

No

It made **sustainable investments with an environmental objective**: __%

in economic activities that qualify as environmentally sustainable under the EU Taxonomy

in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

It made **sustainable investments with a social objective**: __%

It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **46.82%** of sustainable investments

with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

with a social objective

It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Strategy set out to promote a broad range of environmental, social and governance characteristics through its investment inclusion criteria, specifically with a minimum asset allocation of 51% of investments having positive environmental and/or social characteristics and a minimum of 20% of investments being sustainable investments. This commitment was met throughout the reference period (01 January 2024 - 31 December 2024). At the end of the reference period, the Strategy held 78.30% of investments with positive environmental and/or social characteristics and 46.82% of sustainable investments.

These investments were determined by the application of an inclusion and exclusion criteria which applied at both an asset and product level. The inclusion criteria is underpinned by an ESG score assigned to all investments within the strategy to identify those that may be considered to have environmental and/or social characteristics and those that meet the thresholds for being considered as sustainable investments.

The ESG score takes into account the following indicators: effective management of toxic emissions, waste, good environmental record and social characteristics such as effective sustainability disclosures, positive scores on labour relations and management of safety issues.

Through its exclusion criteria (which applied both full and partial exclusions); the Strategy promoted certain norms and values including supporting the protection of internationally proclaimed human rights. The Strategy fully excluded companies that are involved in the manufacture of controversial weapons and applied maximum revenue or production thresholds to others such as those that are involved in thermal coal and tobacco.

In relation to the consideration of Good Governance, all investments (excluding cash and derivatives) were screened to exclude known violators of good governance practices. In addition, for those investments considered to have environmental and/or social characteristics or qualifying sustainable investments, additional considerations applied. For these investments, the Strategy incorporated a peer group comparison and screened out companies that did not score in the top 80% relative to peers based on good governance indicators.

The Strategy had no specific allocation targets in favour of either environmental or social characteristics. The extent to which the promoted environmental and social characteristics were met may be understood by considering the actual % of assets allocated to the relevant companies for the reference period exhibiting such characteristics.

In summary: the Strategy met its pre-contractual committed minimums related to environmental and/or social characteristics and sustainable investments policy throughout the reference period. The Strategy applied screens with the aim of excluding all potential investments prohibited under its exclusion policy throughout this period. The extent to which the norms and values promoted by the Strategy were met is based on whether the Strategy held any positions in companies during the reference period that would have been

prohibited under the exclusion policy. The Investment Manager has no indication that such companies were held. The Investment Manager informs that the continuity of the percentage values and information disclosed cannot be guaranteed in the future and is subject to the constantly evolving legal and regulatory landscape. The duration of the reference period can be less than 12 months if the fund was launched, closed or changed its Article 8/9 status during this time.

● How did the sustainability indicators perform?

A combination of the Investment Manager's proprietary ESG scoring methodology: consisting of the Investment Manager's proprietary ESG score, and/or third-party data was used as part of the inclusion criteria to measure the attainment of the environmental and/or social characteristics that the Strategy promotes.

The methodology was based on a company's management of relevant environmental or social issues such as its toxic emissions, waste management, labour relations and safety issues, diversity/independence of the board of directors and data privacy. To be included in the 51% of assets considered to be promoting environmental and/or social characteristics, a company must score in the top 80% relative to its peers on either its environmental score or social score and meet the good governance conditions outlined above.

At the end of the reference period, the Strategy held 78.30% of investments with positive environmental and/or social characteristics and 46.82% of sustainable investments.

In respect of the applied norms and values based exclusions, the Investment Manager utilised data to measure a company's participation in the relevant activities. Screening on that data resulted in full exclusions on certain potential investments and partial exclusions based on maximum percentage thresholds on revenue or production as envisaged through the exclusions policy. Throughout the reference period, and at no point, were the exclusion rules breached. A subset of the "Adverse Sustainability Indicators" as set out in the EU SFDR Regulatory Technical Standards was also incorporated in the screening.

The Strategy had no specific allocation targets in favour of either environmental or social characteristics and therefore the performance of the indicators in respect of specific environmental or social characteristics is not set out here.

Please refer to the Environmental / Social Characteristics Disclosure for the Strategy on www.jpmorganassetmanagement.lu for further information by searching for your particular Strategy and accessing the ESG Information section.

● ...and compared to previous periods?

	E/S Characteristics	Sustainable Investments	Environmental Taxonomy-aligned	Other Environmental	Social
31/12/2024	78.30%	46.82%	7.46%	17.54%	21.82%
31/12/2023	92.53%	60.81%	0.00%	29.32%	31.49%
31/12/2022	94.14%	45.70%	0.00%	19.36%	26.34%

● What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

The objectives of the sustainable investments that the Strategy partially made were comprised of any individual or combination of the following during the reference period:

Environmental Objectives: (i) climate risk mitigation, (ii) transition to a circular economy

Social Objectives: (i) inclusive and sustainable communities - increased female executive representation, (ii) inclusive and sustainable communities - increased female representation on boards of directors, and (iii) provision of a decent working environment and culture.

Contribution to such objectives was determined by either (i) products and services sustainability indicators which may have included the percentage of revenue derived from providing products and/or services that contributed to the relevant sustainable objective, such as a company producing solar panels or clean energy technology that met the Investment Manager's proprietary thresholds contributing to climate risk mitigation. The current percentage of revenue is set at a minimum of 20% and the entire holding in the company is considered a sustainable investment; or (ii) being an operational peer group leader contributing to the relevant objective. Being a peer group leader is defined as scoring in the top 20% relative to peers based on certain operational sustainability indicators. For example, scoring in the top 20% relative to peers on total waste impact contributes to a transition to a circular economy.

The actual contribution to such objectives may be understood by considering the actual % of assets allocated to sustainable investments for the reference period. The Strategy was required to invest 20% in sustainable investments. At no time during the period did the Strategy hold sustainable investments below its committed minimum. At the end of the reference period, 46.82% of its assets were sustainable investments.

● How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The sustainable investments that the Strategy intended to make were subject to a screening process that sought to identify and exclude, from qualifying as a sustainable investment, those companies which the Investment Manager considered the worst performing companies, based on a threshold determined by the Investment Manager, in relation to certain environmental considerations. As a consequence, only those companies demonstrating the best indicators relative to both absolute and relative measures were considered sustainable investments.

Such considerations include climate change, protection of water and marine resources, transition to a circular economy, pollution and protection of biodiversity and ecosystems. In addition, the Investment Manager also applied a screen that sought to identify and exclude those companies that the Investment Manager considers to be in violation of the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights based on data supplied by third-party service providers.

● ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts on sustainability factors in Table 1 of Annex 1 and certain indicators, as determined by the Investment Manager, in Tables 2 and 3 of Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account as further described below. The Investment Manager used either the metrics in the EU SFDR Regulatory Technical Standards, or where this was not possible due to data limitations or other technical issues, a representative proxy. The Investment Manager consolidated the consideration of certain indicators into a “primary” indicator as set out further below and may have used an additional broader set of indicators than referenced below.

The relevant indicators in Table 1 of Annex 1 of the EU SFDR Regulatory Technical Standards consist of 9 environmental and 5 social and employee related indicators. The environmental indicators are listed at 1-9 and relate to green-house gas emissions (1-3), exposure to fossil fuel, share of non-renewable energy consumption and production, energy consumption intensity, activities negatively affecting biodiversity sensitive areas, emissions to water and hazardous waste (4-9 respectively). Indicators 10 - 14 relate to a company's social and employee matters and cover violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises, lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles, unadjusted gender pay gap, Board gender diversity and exposure to controversial weapons (antipersonnel mines, cluster munitions, chemical weapons and biological weapons) respectively.

The Investment Manager's approach included both quantitative and qualitative aspects to take the above indicators into account. It used particular indicators for screening, seeking to exclude companies that may cause significant harm. It used a subset for engagement with certain companies, seeking to influence best practice and it used certain of them as indicators of positive sustainability performance, by applying a minimum threshold in respect of the indicator to qualify as a sustainable investment. The data needed to take the indicators into account, where available, may have been obtained from investee companies themselves and/or supplied by third-party service providers (including proxy data). Data inputs that are self-reported by companies or supplied by third-party providers may be based on data sets and assumptions that may be insufficient, of poor quality or contain biased information. Due to dependency on third-parties, the Investment Manager cannot guarantee the accuracy or completeness of such data.

Screening

Certain of the indicators were taken into account through the values and norms-based screening to implement exclusions. These exclusions took into account indicators 10 and 14 in relation to UN Global Compact principles and OECD Guidelines for Multinational Enterprises and controversial weapons. The Investment Manager also applied a purpose-built screen. Due to certain technical considerations, such as data coverage in respect of specific indicators, the Investment Manager either applied the specific indicator per Table 1 or a representative proxy, as determined by the Investment Manager to screen investee companies in respect of the relevant environmental or social & employee matters. For example, greenhouse gas emissions are associated with several indicators and corresponding metrics in Table 1, such as greenhouse gas emissions, carbon footprint and greenhouse gas intensity (indicators 1-3). The Investment Manager used greenhouse gas intensity data (indicator 3), data in respect of non-renewable energy consumption and production (indicator 5) and data on energy consumption intensity (indicator 6) to perform its screening in respect of greenhouse gas emissions.

In connection with the purpose-built screening and in respect of activities negatively affecting biodiversity sensitive areas and the emissions to water (indicators 7 and 8), due to data limitations, third-party representative proxy data was used, rather than the specific indicators per Table 1. The Investment Manager also took into account indicator 9 in relation to hazardous waste in respect of the purpose-built screen.

Engagement

In addition to screening out certain companies as described above, the Investment Manager engaged on an ongoing basis with selected underlying investee companies. A subset of the indicators were used, subject to certain technical considerations such as data coverage, as the basis for engaging with selected underlying investee companies in accordance with the approach taken by the Investment Manager on stewardship and engagement. The indicators used in respect of such engagement include indicators 3, 5 and 13 in relation to greenhouse gas intensity, share of non-renewable energy and board gender diversity from Table 1. It also used indicators 2 in Table 2 and 3 in Table 3 in relation to emissions or air pollutants and number of days lost to injuries, accidents, fatalities or illness.

Indicators of Sustainability

The Investment Manager used indicators 3 and 13 in relation to GHG Intensity and board gender diversity as indicators of sustainability to assist in qualifying an investment as a sustainable investment. One of the pathways required a company to be considered as an operational peer group leader to qualify as a sustainable investment. This required scoring against the indicator in the top 20% relative to peers.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

● ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Norms based portfolio exclusions as described above under "To what extent were the environmental and/or social characteristics promoted by this financial product met?" were applied to seek alignment with these guidelines and principles.

Third-party data was used to identify potential violators. Unless an exception was granted, the Strategy prohibited relevant investments in these issuers.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do not significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The Strategy considered select principal adverse impacts on sustainability factors through values and norms-based screening to implement exclusions. Indicators 10 and 14 in relation to violations of the UN Global Compact and controversial weapons from the EU SFDR Regulatory Technical Standards were used in respect of such screening. The Strategy also used certain of the indicators as part of the “Do No Significant Harm” screen as detailed in the response to the question directly above to demonstrate that an investment qualified as a sustainable investment.

A subset of the above-mentioned Adverse sustainability indicators were used to determine engagement with investee companies based on their respective PAI performance.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/01/2024 - 31/12/2024

Largest investments	Sector	% Assets	Country
KWEICHOW MOUTAI CO LTD-A	Consumer Staple	7.05	China

What was the proportion of sustainability-related investments?

Asset allocation
describes the share of
investments in specific
assets.

What was the asset allocation?

At the end of the reference period, the Strategy allocated 78.30% of its assets to companies that exhibited positive environmental and/or social characteristics and 46.82% of assets to sustainable investments. The Strategy did not commit to investing any proportion of assets specifically in securities exhibiting positive environmental characteristics or specifically in positive social characteristics nor is there any commitment to any specific individual or combination of environmental or social objectives.

Ancillary Liquid Assets, Deposits with Credit Institutions, money market instruments/funds (for managing cash subscriptions and redemptions as well as current and exceptional payments) and derivatives for EPM are not included in the % of assets set out in the table below. These holdings fluctuate depending on investment flows and are ancillary to the investment policy with minimal or no impact on investment operations.

Nb: EU Taxonomy alignment for those instruments considered to be sustainable investments by JP Morgan may differ from the complete EU Taxonomy alignment of the Strategy as reflected below (in response to the question: To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?).

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.

- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made?

Although the Strategy promoted certain environmental and social characteristics through its inclusion and exclusion criteria, it may have invested across a broad range of sectors – please refer to the list below for a sector breakdown at the end of the reference period. In addition, the Investment Manager engaged on an ongoing basis with selected underlying investee companies. Investments within sectors and sub-sectors of the economy that derive revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels, will be included in the table below if held. Ancillary Liquid Assets, Deposits with Credit Institutions, money market instruments/funds (for managing cash subscriptions and redemptions as well as current and exceptional payments) and derivatives for EPM are excluded from the results, but are included in the denominator for the % of assets set out both in the table below, and in the Top Investments table.

Sector	Sub-Sector	Assets
Industrials	Capital Goods	19.20
Consumer Staples	Food Beverage And Tobacco	14.74
Information Technology	Technology Hardware And Equipment	11.41
Financials	Insurance	6.72
Information Technology	Semiconductors And Semiconductor Equip	6.43
Financials	Banks	6.06
Health Care	Pharmaceuticals Biotech & Life Sciences	5.35
Consumer Discretionary	Consumer Durables And Apparel	5.28

Consumer Discretionary	Automobiles And Components	3.20
Health Care	Health Care Equipment And Services	3.02
Financials	Financial Services	2.62
Communication Services	Media & Entertainment	1.53
Industrials	Transportation	1.09
Real Estate	Real Estate Management & Development	0.42

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Data on EU Taxonomy alignment is currently very limited, in particular with regards to fossil gas and nuclear energy. We expect this to improve over time as more issuers disclose their alignment, and the data becomes more available.

The Sub-Fund has made no minimum commitment to sustainable investment with environmental objectives aligned to the EU Taxonomy.

Therefore, the precontractual disclosure document for the Sub-Fund indicates the extent of targeted sustainable investments with an environmental objective aligned with the EU Taxonomy as 0%. The alignment of the Sub-Fund is 7.46% based on turnover and is a by-product of the Sub-Fund's framework which considers investments that have environmental and/or social characteristics and sustainable investments (as defined by SFDR).

The below graphs further illustrate the actual extent of investments in sustainable investments with an environmental objective aligned with the EU Taxonomy as measured at the end of the reference period. Holdings of less than 1% will not be reflected in the bar graph.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

The graphs below show in light blue the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the Taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy-alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy-alignment only in relation to the investments of the financial product other than sovereign bonds.

* For the purpose of these graphs, ‘sovereign bonds’ consist of all sovereign exposures

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● **What was the share of investments made in transitional and enabling activities?**

Further to the above, the Strategy has made no minimum commitment to making EU Taxonomy aligned investments – including Transitioning and Enabling activities. Any alignment outlined below is a by-product of the Strategy’s framework which considers investments that have positive environmental and/or social characteristics and sustainable investments.

The calculated share of Transitioning activities represents 0.00% and the calculated share of Enabling activities represents 13.24%, at the end of the reference period.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

Taxonomy aligned	
31/12/2024	7.46%
31/12/2023	0.00%
31/12/2022	0.00%

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 17.54% of assets at the end of the reference period.

are sustainable investments with an environmental

objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 21.82% of assets at the end of the reference period.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The 21.70% of assets in “other” investments were comprised of companies that did not meet the criteria described in response to above question entitled, “How did the sustainability indicators perform?” to qualify as exhibiting positive environmental or social characteristics. They are investments for diversification purposes. Ancillary Liquid Assets, Deposits with Credit Institutions, money market instruments/funds (for managing cash subscriptions and redemptions as well as current and exceptional payments) and derivatives for EPM were not included in the % of assets included in the asset allocation diagram above, including under “other”. These holdings fluctuate depending on investment flows and are ancillary to the investment policy with minimal or no impact on investment operations.

All investments, including “other” investments were subject to the following ESG Minimum Safeguards/principle:

- The minimum safeguards as outlined by Article 18 of the EU Taxonomy Regulation (including alignment with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights), as implemented by the Investment Manager.
- Application of good governance practices (these include sound management structures, employee relations, remuneration of staff and tax compliance), as implemented by the Investment Manager.
- Compliance with the Do No Significant Harm principle as prescribed under the definition of sustainable investment in EU SFDR

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The following binding elements of the investment strategy were applied during the reference period to select the investments to attain each of the environmental or social characteristics:

- The requirement to invest at least 51% of assets in companies with positive environmental and/or social characteristics.
- The values and norms-based screening to implement full exclusions in relation issuers that are involved in certain activities such as manufacturing controversial weapons and applying maximum revenue, production or distribution percentage thresholds to others such as those that are involved in thermal coal and tobacco. Please refer to the exclusions policy for the Strategy on www.jpmorganassetmanagement.lu for further information by searching for your particular Strategy and accessing the ESG Information section.
- The requirement for all companies in the portfolio to follow good governance practices.

The Sub- Fund also committed to investing at least 20% of assets in sustainable investments.

Further information on engagement is available in the answer to the question "How were the indicators for adverse impacts on sustainability factors taken into account?"

How did this financial product perform compared to the reference benchmark?

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Diversity and Inclusion FAM Fund
Legal entity identifier: 254900CFRFO6N4U4IW65

Sustainable investment objective

Did this financial product have a sustainable investment objective?

☒ ☒ ☒ Yes	☐ ☐ ☐ No
☒ It made sustainable investments with an environmental objective: 0% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☐ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of ____% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☒ It made sustainable investments with a social objective: 97.34%	☐ It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Fund invested in companies that have demonstrable gender and/or ethnic diversity, or which provide solutions empowering social equality, in line with its sustainable investment objective. The strength of the fund's performance against this objective is evaluated in the sustainability indicators section below.

The Investment Manager operates data driven quantitative good governance tests used to consider investments into companies. The Investment Manager excludes investments in securities that are considered as failing the Investment Manager's good governance tests. When assessing good governance practice the Investment Manager will, as a minimum, have regard to matters it sees

relevant to the four identified pillars of good governance (sound management structures, employee relations, remuneration of staff and tax compliance).

All investments purchased for the Fund were in compliance with the sustainable investment objective save for as permitted under the "Other" Investments allocation.

The alignment percentage indicated in the graphic below shows the allocation between sustainable investments made in pursuit of the sustainable investment objective and "Other" investments

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● **How did the sustainability indicators perform?**

Please see the below table for an overview of the fund's performance relative to its sustainability indicators.

The 'Eligibility' figure is a measure of the percentage of fund assets which are eligible to be measured by the sustainability indicator. The 'Coverage' figure indicates the percentage of eligible assets for which data is available.

The Fund's sustainability indicators to test its compliance with its sustainable investment approach were met most of the time during the reporting period. There was one inadvertent breach where the Fund held security GRAIL INC, which is not permitted under our internal screening rules. Trades were carried out to bring the fund back into compliance.

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2024			
Year-on-Year Change of women on the board	0.43%	97.33%	98.69%
Year-on-Year Change of women in leadership roles	1.05%	97.33%	81.95%

As at 31 December 2024, the year-on-year change of women in leadership roles within companies held by the portfolio was 1.05%. This covered 81.95% of the portfolio's NAV. The year-on-year change of women on the board at investee companies was 0.43%, with coverage of 98.69% of portfolio NAV. The year-on-year change recorded with regard to ethnic diversity on the board, was -3.04% although data coverage was only 4.82% of the portfolio's NAV. Companies with board gender diversity of 30%, as reported by the company, accounted for 80.11% of NAV and coverage was for 97.33% of NAV. Companies with board ethnic diversity of more than 30%, as reported by the company, accounted for 12.85% of NAV, while coverage was for only 33.80% of NAV (as some companies choose not to or are unable to share data on

employee ethnic diversity). We had no data coverage to report on the following sustainability indicators: year-on-year change of ethnic diversity in leadership roles, and percentage (%) of NAV considered by the Investment Manager to have leadership diversity, based on data reported by the company. Where data coverage is yet to be published, we shall seek to secure these data sets via direct engagement or through a market vendor.

With regard to the percentage (%) of NAV in investments aligned to the United Nations Sustainable Development Goals ("SDGs"), this can be seen in the table above. We consider companies to be aligned with the SDGs if they are impactful companies making intentional, measurable, material positive contributions towards one or more of the goals. The largest proportion of portfolio NAV (16.23%) was aligned to SDG9: Industry, innovation and infrastructure.

For each investment considered to be SDG-aligned, the strength of contribution to the relevant SDG as assessed by percentage of company revenues is decided. These can be seen in the table above. For certain companies, SDG alignment may be below 100% because some of its business activities may contribute towards secondary SDGs or other areas not related to its primary SDG.

● ...and compared to previous periods?

During the reference period, there has been a slight decrease in the percentage of NAV with board gender diversity (more than 30%), as reported by the company, from 81.08% as at 31 December 2023, to 80.11% as at 31 December 2024. With data coverage increasing from 97.29% to 97.33%. The percentage of NAV with board ethnic diversity (more than 30%), as reported by the company, increased from 12.34% to 12.85%, with data coverage increasing from 31.34% to 33.80%.

With regard to portfolio alignment with the United Nations Sustainable Development Goals (SDGs), the total percentage of NAV in investments aligned to the SDGs rose from 42.6% as at 31 December 2023, to 44.79% as at 31 December 2024. Within this, the percentage of NAV aligned to SDG 5: Gender Equality fell from 4.49% to 4.4.31% although coverage increased from 97.29% to 100.00%. While the percentage of NAV aligned to SDG 4: Quality Education fell from 2.17% to 2.04%, whilst coverage fell from 97.29% to 84.51%.

Elsewhere, the percentage of NAV aligned to SDG 9: Industry, Innovation and Infrastructure increased from 14.20% to 16.23%, with increased coverage from 97.29% to 100.00%. Alignment to SDG 10: Reduced Inequalities fell from 3.73% to 2.88% with reduced coverage from 97.29% to 84.51%.

● How did the sustainable investments not cause significant harm to any sustainable investment objective?

Sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective as they are required to pass a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas).

3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures are compatible with sustainable investment.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

— **Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:**

All investments purchased by the Fund must pass the Investment Manager's good governance tests, and in addition, sustainable investments must also pass tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund has committed to a minimum of 80% of the Fund's assets to be invested in social sustainable investments, in pursuit of the social sustainable investment objective. A minimum of 0% of the Fund's assets are to be invested in "Not sustainable" investments, and a minimum of 0% of the Fund's assets are to be invested in "Environmental sustainable" investments.

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The figures were calculated as an annual average of four quarterly measurements for the period ending 31 December 2024.

As of 31 December 2024, 97.34% of the Net Asset Value of the Fund was in sustainable investments, which is above the minimum commitment of 80%. The fund did not commit to invest in investments aligned to the EU Taxonomy: 0% of the sustainable investments were aligned to the EU Taxonomy and 0% related to investments with environmental objectives. 97.34% related to investments with a social objective.

2.66% of the Fund was composed of "not sustainable" investments.

● What was the asset allocation?

The graphic below provides an overview of the asset allocation versus the established minimum thresholds.

● In which economic sectors were the investments made?

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic Sector	% Assets
Manufacturing	34.57%
Information and communication	26.04%
Financial and insurance activities	17.25%
Human health and social work activities	6.77%
Wholesale and retail trade; repair of motor vehicles and motorcycles	4.77%
Administrative and support service activities	3.51%
Unallocated	3.14%
Construction	2.49%
Water supply; sewerage, waste management and remediation activities	1.47%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The Fund held 0% in Taxonomy-aligned sustainable investments during the reference period. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

The percentage of the fund's investments that contributed to the environmental objective of climate mitigation was 1.39%. The percentage of the fund's investments that contributed to the environmental objective of transition to circular economy was 1.89%.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The share of the Fund's investments made in transitional activities over the period was 0% and in enabling activities was 11.24%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

● **How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?**

The share of sustainable investments in the Fund with an environmental objective aligned with the EU Taxonomy was 0% as at 31 December 2024. This compares to 0% in the previous reporting period.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments in the Fund with an environmental objective not aligned with the EU taxonomy over the period was 0%. This compares to the commitment of 0% overall of sustainable investments with environmental objectives that were not aligned to the EU Taxonomy made in the precontractual disclosure.

What was the share of socially sustainable investments?

The share of sustainable investments in the Fund with a social objective over the period was 97.34%. This compares to the commitment of 80% overall of socially sustainable investments made in the precontractual disclosure.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Fund held varying levels of cash, in accordance with the purposes and safeguards explained in the precontractual annex.

The Fund may hold cash, near cash and money market funds, and derivatives as “Other” investments, for hedging purposes or in connection with cash held for ancillary liquidity. No minimum environmental or social safeguards are applied, other than as stated below.

Where derivatives are used to take investment exposure to diversified financial indices, these will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test.

It is also possible that the Fund may hold investments that are not in line with the promoted characteristics, e.g. as a result of a merger or other corporate action, or as a result of the characteristics of a previously acquired investment changing. Where this happens, the Fund will generally seek to dispose of them in the best interests of investors, but may not always be able to do so immediately.

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Fund has invested in companies that have demonstrable gender and/or ethnic diversity, or which provide solutions empowering social equality.

ESG engagements are also a key focus for the fund in order to help investment companies improve their impact and sustainability standards, to support the fund's sustainable investment objective.

How did this financial product perform compared to the reference sustainable benchmark?

● How did the reference benchmark differ from a broad market index?

NA/No reference benchmark was designated to determine whether this fund is aligned with its sustainable investment objective.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?

NA/No reference benchmark was designated to determine whether this fund is aligned with its sustainable investment objective.

● How did this financial product perform compared with the reference benchmark?

NA/No reference benchmark was designated to determine whether this fund is aligned with its sustainable investment objective.

● How did this financial product perform compared with the broad market index?

NA/No reference benchmark was designated to determine whether this fund is aligned with its sustainable investment objective.

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Global Listed Infrastructure FAM Fund
 Legal entity identifier: 254900K08VD3YVM3ZV45

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?	
☒ ☐ ☐ Yes	☒ ☐ ☒ No
☐ It made sustainable investments with an environmental objective : ____% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ It made sustainable investments with a social objective: ____%	☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 57.42% of sustainable investments ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective ☐ It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promoted the use of an Exclusionary Approach and it made investments that are SDG-aligned (as defined below):

The Fund excluded certain potential investments from its investment universe to mitigate potential negative effects on the environment and society and to assist it in delivering more sustainable outcomes ("Exclusionary Approach").

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

The Fund considered the UN Sustainable Development Goals (SDGs) as part of its investment process and the sustainability themes considered by the Investment Manager are based on the SDGs as a relevant framework to measure contribution to sustainability factors (“SDG-alignment”). At least 70% of the Fund’s investments by value will be in investments considered by the Investment Manager to be related to sustainability themes.

No reference benchmark has been designated for the purpose of attaining the Fund’s promoted environmental and/or social characteristics.

The promoted environmental and social characteristics were generally met by all investments made for the Fund other than "Other" Investments. The alignment percentage indicated in the graphic below is tested against the Exclusionary Approach described below, showing the allocation between investments complying with the Exclusionary Approach and Investments which we as deem as “Other” as we don’t consider they can be considered as aligned against the Exclusionary Approach as described in the precontractual annex, such as cash. The SDG aligned characteristic is not used as part of this alignment percentage test – ie investments do not need to be “both” compatible with the Exclusionary Approach and SDG-aligned to be treated as “aligned”.

● **How did the sustainability indicators perform?**

Exclusionary Approach: The Fund's sustainability indicators to test its compliance with its Exclusionary Approach were met at all times during the reporting period.

SDG Aligned:

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2024			
SDG-alignment: Percentage (%) of investments by value that is SDG-aligned	71.76%	98.86%	98.86%

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2023			
SDG-alignment: Percentage (%) of investments by value that is SDG-aligned	79.94%	99.03%	99.03%

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV
As at 31 December 2022			
SDG-alignment: Percentage (%) of investments by value that is SDG-aligned	80.99%	98.81%	98.81%

The Fund maintained an SDG-alignment that was greater than 70% of the Fund’s investments by value excluding cash.

● **...and compared to previous periods?**

The SDG alignment of the fund was slightly lower this year compared to last year.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Whilst the Fund does not commit to invest in sustainable investments, it can nonetheless allocate to sustainable investments of any type, i.e. investments with an environmental, and/or a social objective. The Fund is not required to favour any specific type of sustainable investment.

The Investment Manager uses a series of proprietary tests based on available data to determine whether and how an investment makes positive contribution(s) towards environmental and social objectives.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective as they are required to pass a series of tests, including:

- 1. Whether they represent significant exposure to businesses the Investment Manager considers harmful*
- 2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas)*
- 3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures are compatible with sustainable investment*

How were the indicators for adverse impacts on sustainability factors taken into account?

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

All investments purchased by the Fund must pass the Investment Manager's good governance tests, and in addition, sustainable investments must also pass tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the Union criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the Union criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country

The list includes the **Asset Allocation** describes the share of investments in specific assets.

period which is: 1st January 2024 to 31 December 2024

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund has committed to a minimum of 70% of the Fund's assets to be aligned to the environmental or social characteristics promoted. This includes a minimum 51% of the assets that are qualified as sustainable investments. A minimum of 0% of the Fund's assets are other investments not aligned to the environmental or social characteristics.

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The figures were calculated as an annual average of four quarterly measurements for the period ending 31 December 2024. Actual % investments that were aligned to the environmental or social characteristic promoted was 98.86% of NAV as at 31 December 2024, which is above the 70% minimum commitment. This comprised 57.42% NAV relating to sustainable investments which was above the 51% minimum threshold, and the remaining 41.43% NAV related to investments with other environmental and or social characteristics.

● What was the asset allocation?

The graphic below provides an overview of the asset allocation versus the established minimum thresholds.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflects the “greenness” of investee companies today.
- **capital expenditure** (CapEx) shows the green investments made by investee companies, relevant for a transition to a green economy.
- **operational expenditure** (OpEx) reflects the green operational activities of investee companies.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● *In which economic sectors were the investments made?*

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic Sector	% of Assests
Electricity, Gas, Steam And Air Conditioning Supply	30.44%
Financial And Insurance Activities	15.20%
Real Estate Activities	14.05%
Information And Communication	6.84%
Mining And Quarrying	5.11%
Transportation And Storage	15.59%
Wholesale And Retail Trade; Repair Of Motor Vehicles And Mot	5.46%
Construction	3.50%
Water Supply; Sewerage, Waste Management And Remediation Act	2.97%
Other	0.88%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The Financial Product held 5.42 % in Taxonomy-aligned sustainable investments during the reference period. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

Both charts show 7% Turnover (other i.e. nil gas nil nuclear), 10% CapEx 8% OpEx

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The share of the Fund's investments made in transitional activities over the period was 0.2% and in enabling activities was 4.8%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?

The percentage of investments that were aligned with the EU Taxonomy was lower than last year.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

are sustainable investments with an environmental objective that do not take into account the criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The share of sustainable investments in the Fund with an environmental objective not aligned with the EU taxonomy over the period was 23.12%. This compares to the commitment of 5% overall of sustainable investments with environmental objectives that were not aligned to the EU Taxonomy made in the precontractual disclosure.

What was the share of socially sustainable investments?

The share of sustainable investments in the Fund with a social objective over the period was 28.88%. This compares to the commitment of 5% overall of socially sustainable investments made in the precontractual disclosure.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Fund held varying levels of cash, in accordance with the purposes and safeguards explained in the precontractual annex.

The Fund may hold cash, near cash and money market funds and derivatives as “Other” investments, for any purpose permitted by the Fund’s investment policy. No minimum environmental or social safeguards are applied, other than as set out below.

Derivatives used to take investment exposure to diversified financial indices, and funds (i.e. UCITS and other UCIs) may be held for any reason permitted by the Fund’s investment policy and will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test. No minimum environmental or social safeguards are applied to FX derivatives.

The Fund may also hold as Other investments those investments where insufficient data exists to determine the investments’ alignment with the promoted characteristics. It is also possible that the Fund may hold investments that are not in line with the promoted characteristics, e.g. as a result of a merger or other corporate action, or as a result of the characteristics of a previously acquired investment changing. Where this happens, the Fund will generally seek to dispose of them in the best interests of investors, but may not always be able to do so immediately.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Fund applied an exclusion policy to achieve its Exclusionary Approach. Its compliance with the same is reported in the sustainability indicators section above.

How did this financial product perform compared to the reference benchmark?

● How does the reference benchmark differ from a broad market index?

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

● How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

● ***How did this financial product perform compared with the reference benchmark?***

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

● ***How did this financial product perform compared with the broad market index?***

N/A. No reference benchmark was designated to determine whether this fund is aligned with the environmental and social characteristics that it promotes.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: European STARS Equity FAM Fund

Legal entity identifier: 254900TOMCSFNB6RAO25

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 78 % of sustainable investments

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The E/S characteristics promoted could be environmental and/or social and included the following features:

Minimum proportion of sustainable investments The product promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

ESG scoring The product promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

Sector- and value-based exclusions The product promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

Nordea Asset Management's Paris-Aligned Fossil Fuel Policy The product promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the product was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the product.

How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint Scope 1+2	75 tCO ₂ e / m€ invested	98,12 %	98,12 %
	Carbon footprint Scope 1+2+3	381 tCO ₂ e / m€ invested	98,12 %	98,12 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00 % involved in violations	98,12 %	98,12 %

Coverage: The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the product partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

As part of the process to identify sustainable investments, companies were screened to ensure that they did not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How were the indicators for adverse impacts on sustainability factors taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this product were:

CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	8.005 tCO2e	98,12 %	98,12 %
		Scope 2 GHG emissions	1.548 tCO2e	98,12 %	98,12 %

SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Social and employee matters	Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00 % involved in violations	98,12 %
	Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance /complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0,00 % without policies	98,12 %
	Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	12,50 % pay gap	70,81 %
	Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members	43,23 % (female directors / total directors)	98,12 %
	Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0,00 % involvement	98,12 %

Eligibility: The proportion of the assets in the financial product (relative to NAV), which are in scope for the indicator.

Coverage: The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

What were the top investments of this financial product?

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is:
1 January 2024 - 31 December 2024

Largest investments	Sector	Assets	Country
Nestle	Consumer, Non-cyclical	5,16 %	Switzerland
Siemens	Industrial	4,89 %	Germany
ASML Holding	Technology	4,80 %	Netherlands
Novo Nordisk B	Consumer, Non-cyclical	4,31 %	Denmark
AstraZeneca	Consumer, Non-cyclical	4,05 %	United Kingdom
Deutsche Telekom	Communications	3,51 %	Germany
Societe Generale	Financial	3,23 %	France
Unilever	Consumer, Non-cyclical	3,05 %	United Kingdom
BT Group	Communications	2,79 %	United Kingdom
Legal & General Group	Financial	2,73 %	United Kingdom
Infineon Technologies	Technology	2,72 %	Germany
ING Groep	Financial	2,67 %	Netherlands
Cie de Saint-Gobain	Industrial	2,51 %	France
National Grid	Utilities	2,45 %	United Kingdom

What was the proportion of sustainability-related investments?

What was the asset allocation?

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

● *In which economic sectors were the investments made?*

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☒ Yes:

☐ In fossil gas

☒ In nuclear energy

☐ No

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	1,09 %
Enabling activities	5,91 %
Sum	7,01 %

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2024	8,33 %
2023	0,00 %
2022	0,00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 51 %.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 49 %.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The product may have used derivatives and other techniques for the purposes described in the investment guidelines. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product have been monitored and documented on an ongoing basis.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Template periodic disclosure for the financial products referred to in Article 9, paragraphs 1 to 4a, of Regulation (EU) 2019/2088 and Article 5, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852 establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: Global Sustain Paris Aligned FAM Fund
Legal entity identifier: 2549005BYRQXNZPSR450

Sustainable investment objective

Did this financial product have a sustainable investment objective?	
☒ ☒ ☐ Yes ☒ It made sustainable investments with an environmental objective: 97.73% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ It made sustainable investments with a social objective: _0_ %	☒ ☐ ☐ No ☐ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of _____% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective ☐ It promoted E/S characteristics, but did not make any sustainable investments

To what extent was the sustainable investment objective of this financial product met?

The Fund invested in companies that contribute towards the Paris Agreement climate change goal, in line with its sustainable investment objective. The strength of the fund’s performance against this objective is evaluated in the sustainability indicators section below.

Sustainability indicators measure how the sustainable objectives of this financial product are attained.

● **How did the sustainability indicators perform?**

The Fund invested in companies that contribute towards the Paris Agreement climate change goal, in line with its sustainable investment objective. The strength of the fund's performance against this objective is evaluated in the sustainability indicators section below.

The percentage of the fund's investments that contributed to the environmental objective of climate mitigation was 3.11%. The percentage of the fund's investments that contributed to the environmental objective of transition to circular economy was 1.72%.

0% of the fund's investments contributed to the following environmental objectives: climate adaptation, pollution prevention and control, protection and restoration of biodiversity and ecosystems, , and sustainable use and protection of water and marine resources.

The Investment Manager operates data driven quantitative good governance tests used to consider investments into companies. The Investment Manager excludes investments in securities that are considered as failing the Investment Manager's good governance tests. When assessing good governance practice the Investment Manager will, as a minimum, have regard to matters it sees relevant to the four identified pillars of good governance (sound management structures, employee relations, remuneration of staff and tax compliance).

All investments purchased for the Fund were in compliance with the sustainable investment objective save for as permitted under the "Other" Investments allocation.

The alignment percentage indicated in the graphic below shows the allocation between sustainable investments made in pursuit of the sustainable investment objective and "Other" investments.

Please see the below table for an overview of the fund's performance relative to its sustainability indicators.

Sustainability Indicator Name	Value	Eligibility % NAV	Coverage % NAV

The 'Eligibility' figure is a measure of the percentage of fund assets which are eligible to be measured by the sustainability indicator. The 'Coverage' figure indicates the percentage of eligible assets for which data is available.

As at 31 December 2024, companies accounting for 57.53% of the portfolio's NAV had ratified science-based targets while companies accounting for 19.13% of the portfolio's NAV had committed science-based targets. Data was available for companies accounting for up to 91.95% of NAV. Meanwhile, companies accounting for 71.45% of the portfolio's NAV said they were participating in Task Force on Climate-Related Financial Disclosures (TCFD) reporting. Data was available for companies accounting for 97.72% of NAV (in other words it excluded cash). We are unable to report on the total renewable energy produced (in megawatt hours) as we had no data coverage of companies in the portfolio.

The weighted average carbon intensity (WACI) of the portfolio (calculated as metric tonnes of CO₂ emitted per US\$ million of sales) indicates the intensity of the fund's carbon emissions. The number combines the carbon intensity of every holding in the fund, weighted to their proportions in the fund. As at 31 December 2024, this was 43.85 compared to 95.4 for the investment universe as represented by the MSCI World Net Return Index. 100% of the portfolio was covered by the calculation as it excluded cash and "other" investments.

At a security level, companies in the portfolio providing direct solutions to the climate challenge via their products and services avoided 252.9 million metric tonnes of CO₂. The emissions avoided by six holdings for which data was available, which together accounted for 15.10% of the portfolio's NAV, are shown in the table above. Please note that Oersted changed its methodology to now report avoided GHG emissions from the proceeds of green bonds only. Based on this new methodology, the equivalent 2023 figure for Oersted is 1.4.

● **...and compared to previous periods?**

Since the Fund's first SFDR Level 2 Periodic Report disclosure, the percentage of NAV represented by companies with ratified science-based targets has increased, from 53.8% as at 31 December 2023, to 57.53% as at 31 December 2024. At the same time, the percentage of NAV represented by companies with committed science-based targets has fallen from 20.8% as at 31 December 2023 to 19.1% as at 31 December 2024. The above percentage changes reflect companies in the fund moving from the initial 'commitment' stage to the 'ratified' stage with regards to science-based target setting. During the reporting period we engaged with a number of investee companies, and encouraged them to set science-based targets. Since the previous reporting period, the percentage of NAV represented by companies participating in Task Force on Climate-Related Financial Disclosures (TCFD) reporting dropped slightly, from 71.9% to 71.5%.

With regards to Weighted Average Carbon Intensity (WACI), the fund's WACI was 43.85 as at 31 December 2024, while the WACI for the investment universe (MSCI World Net Return

Index) was 95.47. In the previous year's disclosure, these figures were 48.6 for the fund and 105.4 for the investment universe.

There was an increase to the total amount of avoided emissions from investee companies providing climate solutions since the previous reporting period. Notably, investee company Schneider Electric saw its avoided emissions increase from 93 million tonnes to 113 million tonnes. Conversely, industrial chemicals producer Linde's avoided emissions increased from 90 million tonnes to 91 million tonnes, while facilities management services provider Johnson Controls maintained its avoided emissions of 4.5 million tonnes.

Solar power component manufacturer SolarEdge, and online marketplace eBay, together delivered 41.6 million tonnes of avoided emissions, by facilitating the generation of clean electricity and the resale of used or out-of-season goods. This is a slight increase from 32.5 million delivered in the previous period. Orsted's number dropped significantly from 18.2 million tons avoided emissions to 2.8 in the most recent period. However, it is important to note that Oersted changed its methodology to now report avoided GHG emissions from the proceeds of green bonds only. Based on this new methodology, the equivalent 2023 figure for Orsted is 1.4.

● **How did the sustainable investments not cause significant harm to any sustainable investment objective?**

Sustainable investments that the Fund intends to make do not cause significant harm to any environmental or social sustainable investment objective as they are required to pass a series of tests, including:

1. Whether they represent significant exposure to businesses the Investment Manager considers harmful.
2. Principal Adverse Impact indicators considered to render the investment incompatible with sustainable investment (violations of the UN Global Compact Principles or the OECD Guidelines for Multinational Enterprises, social violations by sovereigns such as being subject to sanctions, negative effects on biodiversity sensitive areas).
3. Other Principal Adverse Impact indicators form part of a materiality assessment to understand whether any exposures are compatible with sustainable investment.

— **How were the indicators for adverse impacts on sustainability factors taken into account?**

The Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available (i.e. not just for sustainable investments), which allows the Investment Manager to make informed investment decisions.

The Fund's consideration of Principal Adverse Impact indicators is used as part of understanding the operating practices of the investments purchased by the Fund. Investments held by the Fund are then subject to ongoing monitoring and a quarterly review process.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

All investments purchased by the Fund must pass the Investment Manager's good governance tests, and in addition, sustainable investments must also pass tests to confirm they do no significant harm, as described above. These tests embed a consideration of the OECD Guidelines and UN Guiding Principles.

How did this financial product consider principal adverse impacts on sustainability factors?

For sustainable investments, principal adverse impacts are a key part of assessing such investments do not do significant harm as explained above. For other investments the Investment Manager's research process includes consideration of Principal Adverse Impact indicators for all investments where data is available, which allows the Investment Manager to make informed investment decisions, as explained above.

Further information on the Principal Adverse Impact indicators which are taken into account by the Investment Manager can be found in the Annex to the Manager's website disclosures for the Fund.

What were the top investments of this financial product?

Largest Investments	Sector	% Assets	Country
Microsoft Corp	Information And Communication	7.80%	US

Siemens Ag	Manufacturing	2.89%	Germany

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: 1st January 2022 to 31st December 2022

What was the proportion of sustainability-related investments?

In the SFDR Level 2 Pre-Contractual Disclosure (annex to the Fund Prospectus) the Fund has committed to a minimum of 80% of the Fund's assets to be invested in environmental sustainable investments, in pursuit of the environmental sustainable investment objective. The Fund is not required to favour any specific type of environmental sustainable investment.

Asset allocations below are expressed as a percentage of Net Asset Value (NAV). The figures were calculated as an annual average of four quarterly measurements for the period ending 31 December 2024.

As of 31 December 2024, 97.73 % of the Net Asset Value of the Fund was in sustainable investments, which is above the minimum commitment of 80%. Whilst the fund did not commit to invest in investments aligned to the EU Taxonomy, 1.81% of the sustainable investments were aligned to the EU Taxonomy. 97.73 related to investments with environmental objectives.

2.27% of the Fund was composed of "not sustainable" investments. This is equivalent to the cash position in the portfolio.

● What was the asset allocation?

The graphic below provides an overview of the asset allocation versus the established minimum thresholds.

● In which economic sectors were the investments made?

The investment breakdown uses NACE (Nomenclature of Economic Activities) and is expressed as a % of Net Asset Value (NAV).

Economic Sector	% of Assests
Information And Communication	27.00%
Financial And Insurance Activities	31.95%
Manufacturing	32.04%
Wholesale And Retail Trade; Repair Of Motor Vehicles And Mot	5.55%
Electricity, Gas, Steam And Air Conditioning Supply	1.55%
Administrative And Support Service Activities	1.14%
unallocated	0.77%

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under the EU Taxonomy.

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

Whilst the minimum mandatory allocation to Taxonomy-aligned sustainable investments is 0%, the Fund is permitted to allocate to such investments, which would form part of its overall allocation to sustainable investments with environmental objectives.

The Fund held 1.81% in Taxonomy-aligned sustainable investments during the reference period. This percentage is determined by taking the quarter end figure for each quarter in the reference period and averaging it. The information was obtained from public disclosures.

The percentage of the fund's investments that contributed to the environmental objective of climate mitigation was 3.11%. The percentage of the fund's investments that contributed to the environmental objective of transition to circular economy was 1.72%.

No assurance from an auditor, third party or review was undertaken on the EU Taxonomy data.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

*For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

What was the share of investments made in transitional and enabling activities?

The share of the Fund's investments made in transitional activities over the period was 0% and in enabling activities was 8.36%. This compares to a minimum percentage commitment of 0% stated in the Fund's precontractual disclosure.

How did the percentage of investments aligned with the EU Taxonomy compare with previous reference periods?

The share of sustainable investments in the Fund with an environmental objective aligned with the EU Taxonomy was 1.81% as at 31 December 2024. This compares to 3.62% in the previous reporting period.

What was the share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 95.92%. This compares to the commitment of 5% overall of sustainable investments with environmental objectives that were not aligned to the EU Taxonomy made in the precontractual disclosure.

What was the share of socially sustainable investments?

The share of sustainable investments in the Fund with a social objective over the period was 0%. This compares to the commitment of 0% overall of socially sustainable investments made in the precontractual disclosure.

What investments were included under “not sustainable”, what was their purpose and were there any minimum environmental or social safeguards?

During the reference period the Fund held varying levels of cash, in accordance with the purposes and safeguards explained in the precontractual annex.

The Fund may hold cash, near cash and money market funds, and derivatives as “Other” investments, for hedging purposes or in connection with cash held for ancillary liquidity. No minimum environmental or social safeguards are applied, other than as stated below.

Where derivatives are used to take investment exposure to diversified financial indices, these will be subject to such minimum environmental or social safeguard tests as the Investment Manager considers appropriate, for example a minimum weighted ESG score test.

It is also possible that the Fund may hold investments that are not in line with the promoted characteristics, e.g. as a result of a merger or other corporate action, or as a result of the characteristics of a previously acquired investment changing. Where this happens, the Fund will generally seek to dispose of them in the best interests of investors, but may not always be able to do so immediately.

What actions have been taken to attain the sustainable investment objective during the reference period?

The Fund has invested in companies that contribute towards the Paris Agreement climate change goal. Its compliance with the same is reported in the sustainability indicators above.

ESG engagements are also a key focus for the fund in order to help investment companies improve their climate and sustainability standards, to support the fund's sustainable investment objective.

How did this financial product perform compared to the reference sustainable benchmark?

- *How did the reference benchmark differ from a broad market index?*

Reference benchmarks are indexes to measure whether the financial product attains the sustainable objective.

N/A.No reference benchmark was designated to determine whether this fund is aligned with its sustainable investment objective.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the sustainable investment objective?***

N/A.No reference benchmark was designated to determine whether this fund is aligned with its sustainable investment objective.

- ***How did this financial product perform compared with the reference benchmark?***

N/A.No reference benchmark was designated to determine whether this fund is aligned with its sustainable investment objective.

- ***How did this financial product perform compared with the broad market index?***

N/A.No reference benchmark was designated to determine whether this fund is aligned with its sustainable investment objective.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: North American STARS Equity FAM Fund

Legal entity identifier: 254900AWYCN71JRUY496

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 77 % of sustainable investments

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The E/S characteristics promoted could be environmental and/or social and included the following features:

Minimum proportion of sustainable investments The product promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

ESG scoring The product promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

Sector- and value-based exclusions The product promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

Nordea Asset Management's Paris-Aligned Fossil Fuel Policy The product promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the product was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the product.

How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint Scope 1+2	18 tCO ₂ e / m€ invested	98,89 %	98,89 %
	Carbon footprint Scope 1+2+3	116 tCO ₂ e / m€ invested	98,89 %	98,89 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	6,50 % involved in violations	98,89 %	98,89 %

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the product partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

As part of the process to identify sustainable investments, companies were screened to ensure that they did not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How were the indicators for adverse impacts on sustainability factors taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this product were:

CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	6.082 tCO2e	98,89 %	98,89 %

Danaher	Consumer, Non-cyclical	1,80 %	United States
AbbVie	Consumer, Non-cyclical	1,76 %	United States

What was the proportion of sustainability-related investments?

What was the asset allocation?

The product contains investments with both an environmental and a social objective. A single investment can both contribute to an environmental and a social objective resulting in a total allocation amounting to more than 100 per cent. There is no prioritisation of environmental and social objectives, and the strategy does not target any specific allocation or minimum proportion for either of these categories. The investment process accommodates the combination of environmental and social objectives by allowing the investment manager the flexibility to allocate between these based on availability and attractiveness of investment opportunities.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

- Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas

☐ In nuclear energy

☒ No

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

1. Taxonomy-alignment of investments including sovereign bonds*

2. Taxonomy-alignment of investments excluding sovereign bonds*

***For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures**

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significant harm to any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

There is no data available for the reporting period to confirm that the financial product invested in any fossil fuel gas and/or nuclear energy related activities that comply with the EU Taxonomy.

Assessment on Taxonomy alignment is currently conducted with data from third party providers as well as self-reported data from investee companies when available. Proprietary tools and processes to measure significant harm and minimum social safeguards have been developed.

The methodology applied by the third-party data providers assesses how companies are involved in economic activities that substantially contribute to an environmental objective while not significantly harming other sustainable objectives and meeting minimum social safeguards. Taxonomy-alignment of the investment is based on the percentage of turnover exposed or potentially exposed to taxonomy-aligned activities. Data providers' methodologies vary and results may not be fully aligned as long as publicly reported company data is still lacking and assessments rely largely on equivalent data.

We prioritise the use of self-reported data where available. Where data providers are used to deliver equivalent data, NAM has conducted due diligence on the data provider's methodology. Out of caution, unless we are able to confirm available data for the majority of the portfolio's holdings, we will report 0 (zero) per cent of Taxonomy-Aligned Investments.

The compliance of the investments with the EU Taxonomy has not been subject to an assurance by auditors or a review by third parties. Data provider methodologies vary and results may not be fully aligned as long as publicly reported data is still lacking.

● ***What was the share of investments made in transitional and enabling activities?***

Type of Activity	Assets
Transitional activities	0,03 %
Enabling activities	0,92 %
Sum	0,94 %

● ***How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?***

Reference Period	Taxonomy-Aligned Investments
2024	1,98 %
2023	0,00 %
2022	0,00 %

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective not aligned with the EU Taxonomy was 58 %.

What was the share of socially sustainable investments?

The share of socially sustainable investments was 63 %.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

Cash may have been held as ancillary liquidity or for risk balancing purposes. The product may have used derivatives and other techniques for the purposes described in the investment guidelines. This category may also have included securities for which relevant data is not available. Minimum environmental or social safeguards were not applicable.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The binding elements of the investment strategy used to select the investments to attain each of the environmental or social characteristics promoted by this product have been monitored and documented on an ongoing basis.

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not include a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Product name: GLOBAL Stars Equity FAM FUND

Legal entity identifier: 254900PEW9O0DN154A24

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes
☒ ☐ ☒ No

☐ It made sustainable investments with an environmental objective: ____% ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ It made sustainable investments with a social objective: ____%	☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 75 % of sustainable investments ☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☒ with a social objective ☐ It promoted E/S characteristics, but did not make any sustainable investments
---	---

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The E/S characteristics promoted could be environmental and/or social and included the following features:

Minimum proportion of sustainable investments The product promoted E/S characteristics by partially investing in companies and issuers involved in activities that contributed to an environmental or social objective as outlined in UN Sustainable Development Goals (SDGs) and/or the EU Taxonomy, while not significantly harming any other environmental or social objectives and following good governance practices.

ESG scoring The product promoted E/S characteristics by investing in companies or issuers with favourable ESG scores. Investee companies or issuers have been analysed and scored by NAM or by an external provider to ensure that only securities issued by companies that met the minimum required ESG score were eligible for inclusion.

Sector- and value-based exclusions The product promoted E/S characteristics by excluding companies that were deemed to be inappropriate based on their business activities or corporate behaviour.

Nordea Asset Management's Paris-Aligned Fossil Fuel Policy The product promoted E/S characteristics by refraining from investing in companies that had significant exposure to fossil fuels unless they had a credible transition strategy.

The benchmark used by the product was not designated as a reference benchmark for the purpose of attaining the E/S characteristics promoted by the product.

How did the sustainability indicators perform?

Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage
Carbon Footprint	Carbon footprint Scope 1+2	21 tCO ₂ e / m€ invested	98,38 %	98,32 %
	Carbon footprint Scope 1+2+3	124 tCO ₂ e / m€ invested	98,38 %	98,32 %
% of total investments in companies violating United Nations Global Compact	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	5,02 % involved in violations	98,38 %	98,38 %

Coverage: The proportion of the assets in the financial product (relative to NAV), where data is available to present the indicator.

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

The objective of the sustainable investments that the product partially made, was to contribute to one or several of the UN SDGs or alternatively be involved in Taxonomy-aligned activities. Sustainable investments contributed to the objectives through the fund's investments in companies where a minimum of 20% of their activity could be linked to economic activities supporting an environmentally-sustainable objective defined in the EU Taxonomy, or an environmental or social objective belonging to the list of UN SDGs.

The UN SDGs are a set of 17 Sustainable Development Goals adopted by the United Nations in 2015 as a call for action to end poverty, protect the planet, and ensure peace and prosperity by 2030.

The EU Taxonomy provides a framework for assessment of environmentally sustainable economic activities and lists economic activities that are considered environmentally sustainable in the context of the European Green Deal.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anticorruption and antibribery matters.

As part of the process to identify sustainable investments, companies were screened to ensure that they did not significantly harm (DNSH test) any other social or environmental objectives. The DNSH test used PAI indicators, as described below, to identify and exclude companies that do not pass the thresholds.

How were the indicators for adverse impacts on sustainability factors taken into account?

The DNSH test, as part of the methodology to identify sustainable investments, identified negative outliers and poor performance related to PAI indicators. The investment manager considered the PAI indicators from Table 1, annex 1 in the SFDR RTS. In the reporting period, data was mainly available for the use of the below indicators.

Climate and other environment related indicators:

- Greenhouse Gas emissions
- Biodiversity impact
- Emissions to water
- Hazardous waste

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters:

- Violations of the UNGC and OECD principles
- Board gender diversity
- Exposure to controversial weapons
- Severe human rights issues and incidents

Companies that did not pass the thresholds that were defined by the investment manager, did not qualify as a sustainable investment. This included companies that were involved in severe human rights incidents, severe controversies related to biodiversity or violations of the UNGC and OECD principles.

Companies also failed the DNSH test if they were among the worst performers on emissions to water, hazardous waste or Greenhouse Gas emissions. In addition, companies that derived more than 0% of revenue from unconventional fossil fuel failed the DNSH test, and companies that derived more than 5% from conventional fossil fuel or more than 50% from services specific to the fossil fuel industry only passed the DNSH test if they were below the climate related exclusions criteria of the EU Paris Aligned Benchmark with revenue thresholds of 1% for coal, 10% for oil, 50% for natural gas and 50% for fossil fuel based electricity generation, and had a climate transition plan. Our Paris Aligned Fossil Fuel Policy describes the criteria used to identify companies with credible transition plans.

Additional exclusions to further limit negative externalities were applied to the investment universe of the fund, to avoid investment in companies that were involved in thermal coal or production of fossil fuels from oil sands and arctic drilling, as well as controversial weapons, and pornography.

The data on PAI indicators needed for the DNSH test was sourced from third party data providers.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Alignment of the sustainable investments with the OECD guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights was confirmed as part of the process to identify sustainable investments using the Violations of the UNGC and OECD principles indicator.

The EU Taxonomy sets out a “do no significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The specific PAI indicators that were taken into consideration for this product were:

CLIMATE AND OTHER ENVIRONMENT-RELATED INDICATORS

Adverse Sustainability Indicator	Metric	Metric Value	Eligibility	Coverage	
Greenhouse gas "GHG" emissions	GHG emissions	Scope 1 GHG emissions	4.766 tCO2e	98,38 %	98,32 %
		Scope 2 GHG emissions	1.126 tCO2e	98,38 %	98,32 %

How did this financial product perform compared to the reference benchmark?

Not applicable.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

Periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: GLOBAL DISRUPTIVE OPPORTUNITIES FAM FUND

Legal entity identifier: 254900PT325H9KEZSA22

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ ☐ Yes ☒ ☐ ☒ No

☐ It made sustainable investments with an environmental objective: _____ ☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy	☒ It promoted Environmental/Social (E/S) characteristics and while it did not have as its objective a sustainable investment, it had a proportion of 50.31% of sustainable investments ☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy ☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy ☐ with a social objective
☐ It made a sustainable investments with a social objective: _____	☐ It promoted E/S characteristics, but did not make any sustainable investments

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund promotes environmental or social characteristics, but does not have as its objective sustainable investment. The Fund promotes environmental and/or social characteristics by aiming to have a higher ESG score than the ESG score of the MSCI World Net Return Index. In determining the ESG score of the Fund and the MSCI World Net Return Index, ESG performance is assessed by comparing the average performance of a security against the security issuer’s industry, in respect of each of the three ESG characteristics of environmental, social and governance. The MSCI World Net Return Index is a broad market index which does not assess or include constituents according to environmental and/or social characteristics and therefore is not intended to be consistent with the characteristics promoted by the Fund. No sustainability reference benchmark has been designated for the purpose of attaining the environmental and social characteristics promoted.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● ***How did the sustainability indicators perform?***

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach. Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate. The sustainability indicator used is the ESG score of the Product that is measured against the ESG score of the ESG investment universe of the Product.

At the end of the period :

- The weighted average ESG rating of the portfolio is **0.027 (D)**
- The weighted average ESG rating of the reference index is **-0.255 (D)**

The Amundi ESG rating used to determine the ESG score is an ESG quantitative score translated into seven grades, ranging from A (the best scores universe) to G (the worst). In the Amundi ESG Rating scale, the securities belonging to the exclusion list correspond to a G. For corporate issuers, ESG performance is assessed globally and at relevant criteria level by comparison with the average performance of its industry, through the combination of the three ESG dimensions:

- Environmental dimension: this examines issuers’ ability to control their direct and indirect environmental impact, by limiting their energy consumption, reducing their greenhouse emissions, fighting resource depletion and protecting biodiversity.
- Social dimension: this measures how an issuer operates on two distinct concepts: the issuer’s strategy to develop its human capital and the respect of the human rights in general;
- Governance dimension: This assesses capability of the issuer to ensure the basis for an effective corporate governance framework and generate value over the long-term.

The methodology applied by Amundi ESG rating uses 38 criteria that are either generic (common to all companies regardless of their activity) or sector specific which are weighted according to sector and considered in terms of their impact on reputation, operational efficiency and regulations in respect of an issuer. Amundi ESG ratings are likely to be expressed globally on the three E, S and G dimensions or individually on any environmental or social factor.

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was **0.257 (D)** and the weighted average ESG rating of the reference index was **-0.146 (D)**.

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and

security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product’s strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion :** Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration :** Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement :** Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote :** Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring :** Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/01/2024 to 31/12/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
NVIDIA CORP	Information Technology	Semiconductors & Semiconductor Equipment	United States	5.48%
AMAZON.COM INC	Consumer Discretionary	Consumer Discretionary Distribution & Retail	United States	4.50%
MICROSOFT CORP	Information Technology	Software & Services	United States	4.03%
ALPHABET INC CL A	Communication Services	Media & Entertainment	United States	3.25%
MASTERCARD INC-CL A	Financials	Financial Services	United States	2.81%
PALO ALTO NETWORKS INC	Information Technology	Software & Services	United States	2.81%

NEXTERA ENERGY INC	Utilities	Electric Utilities	United States	2.17%
BROADCOM INC	Information Technology	Semiconductors & Semiconductor Equipment	United States	2.10%

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

In which economic sectors were the investments made ?

Sector	Sub-Sector	% Assets
Information Technology	Software & Services	25.85%
Information Technology	Semiconductors & Semiconductor Equipment	13.70%
Industrials	Capital goods	11.43%
Financials	Financial Services	8.18%

<i>Health Care</i>	<i>Pharmaceuticals Biotech & Life Sciences</i>	6.74%
<i>Consumer Discretionary</i>	<i>Consumer Discretionary Distribution & Retail</i>	5.49%
<i>Communication Services</i>	<i>Media & Entertainment</i>	5.27%
<i>Health Care</i>	<i>Health Care Equipment & Services</i>	4.54%
<i>Consumer Discretionary</i>	<i>Consumer Services</i>	2.67%

<i>Information Technology</i>	<i>Technology Hardware & Equipment</i>	2.25%
<i>Utilities</i>	<i>Electric Utilities</i>	2.17%
<i>Industrials</i>	<i>Commercial & Professional Services</i>	1.82%
<i>Real Estate</i>	<i>REITs</i>	1.54%
<i>Consumer Discretionary</i>	<i>Automobiles & Components</i>	1.02%
<i>Real Estate</i>	<i>Real Estate Management & Development</i>	0.79%
<i>Others</i>	<i>Others</i>	-0.06%
<i>Forex</i>	<i>Forex</i>	-0.14%
<i>Cash</i>	<i>Cash</i>	4.34%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy ?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 1.05% in sustainable investments aligned with the EU Taxonomy. These investments contributed to the climate change mitigation objectives of the EU Taxonomy.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or

low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- turnover reflecting the share of revenue from green activities of investee companies
- capital expenditure (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- operational expenditure (OpEx) reflecting green operational activities of investee companies.

The alignment of investee companies with the above-mentioned EU Taxonomy objectives is measured using turnover (or revenues) and/or green bond use-of-proceeds data.

The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

☐ Yes:

☐ In fossil gas☐ In nuclear energy

☒ No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 31/12/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 1.03%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

- **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period: the percentage of investments with Taxonomy alignment was 0.74%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

- **What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?**

The share of sustainable investments with environmental objective not aligned to taxonomy was **32.75%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

- **What was the share of socially sustainable investments ?**

The share of socially sustainable investments at the end of the period was 16.50%.

- **What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?**

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

- **What actions have been taken to meet the environmental and/or social characteristics during the reference period ?**

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

- ***How does the reference benchmark differ from a broad market index ?***

This product does not have an ESG Benchmark

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the reference benchmark ?***

This product does not have an ESG Benchmark.

- ***How did this financial product perform compared with the broad market index ?***

This product does not have an ESG Benchmark.

Product name: MEDTECH FAM FUND

Legal entity identifier:
254900HQ05SNSPZCOS64

Sustainable investment means an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does not significantly harm any environmental or social objective and that the investee companies follow good governance practices.

The **EU Taxonomy** is a classification system laid down in Regulation (EU) 2020/852, establishing a list of **environmentally sustainable economic activities**. That Regulation does not lay down a list of socially sustainable economic activities. Sustainable investments with an environmental objective might be aligned with the Taxonomy or not.

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☒ ☐ Yes

☒ ☐ ☒ No

☐ It made **sustainable investments with an environmental objective:** _____

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made a **sustainable investments with a social objective:** _____

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of **26.52%** of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The product has respected all material aspects of the characteristics described in the prospectus.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

● **How did the sustainability indicators perform?**

Amundi has developed its own in-house ESG rating process based on the “Best-in-class” approach.

Ratings adapted to each sector of activity aim to assess the dynamics in which companies operate.

For more detail, please refer to the Sustainable Investment section of the Prospectus.

At the end of the period :

- The weighted average ESG rating of the portfolio is **0.077 (D)**
- The weighted average ESG rating of the reference index is **-0.011 (D)**

● ***... and compared to previous periods?***

At the end of the previous period, the weighted average ESG rating of the portfolio was 0.115 (D) and the weighted average ESG rating of the reference index was -0.032 (D).

● ***What were the objectives of the sustainable investments that the financial product partially intends to make and how did the sustainable investment contribute to such objectives?***

The objectives of the sustainable investments are to invest in investee companies that seek to meet two criteria:

1. follow best environmental and social practices; and
2. avoid making products or providing services that harm the environment and society.

In order for the investee company to be deemed to contribute to the above objective it must be a "best performer" within its sector of activity on at least one of its material environmental or social factors.

The definition of "best performer" relies on Amundi's proprietary ESG methodology which aims to measure the ESG performance of an investee company. In order to be considered a "best performer", an investee company must perform with the best top three rating (A, B or C, out of a rating scale going from A to G) within its sector on at least one material environmental or social factor. Material environmental and social factors are identified at a sector level. The identification of material factors is based on Amundi ESG analysis framework which combines extra-financial data and qualitative analysis of associated sector and sustainability themes. Factors identified as material result in a contribution of more than 10% to the overall ESG score. For energy sector for example, material factors are: emissions and energy, biodiversity and pollution, health and security, local communities and human rights. For a more complete overview of sectors and factors, please refer to the Amundi ESG Regulatory Statement available at www.amundi.lu

To contribute to the above objectives, the investee company should not have significant exposure to activities (e.g. tobacco, weapons, gambling, coal, aviation, meat production, fertilizer and pesticide manufacturing, single-use plastic production) not compatible with such criteria.

The sustainable nature of an investment is assessed at investee company level.

● ***How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?***

To ensure sustainable investments do no significant harm ('DNSH'), Amundi utilises two filters:

The first DNSH filter relies on monitoring the mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the RTS where robust data is available (e.g. GHG intensity of investee companies) via a combination of indicators (e.g. carbon intensity) and specific thresholds or rules (e.g. that the investee company's carbon intensity does not belong to the last decile of the sector).

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, violations of UN Global Compact principles, coal and tobacco.

Beyond the specific sustainability factors covered in the first filter, Amundi has defined a second filter, which does not take the mandatory Principal Adverse Impact indicators above into account, in order to verify that the company does not badly perform from an overall environmental or social standpoint compared to other companies within its sector which corresponds to an environmental or social score superior or equal to E using Amundi's ESG rating.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

– ***How were the indicators for adverse impacts on sustainability factors taken into account?***

The indicators for adverse impacts have been taken into account as detailed in the first do not significant harm (DNSH) filter above.

The first DNSH filter relies on monitoring of mandatory Principal Adverse Impacts indicators in Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 where robust data is available via the combination of following indicators and specific thresholds or rules:

- Have a CO2 intensity which does not belong to the last decile compared to other companies within its sector (only applies to high intensity sectors), and
- Have a Board of Directors' diversity which does not belong to the last decile compared to other companies within its sector, and
- Be cleared of any controversy in relation to work conditions and human rights.
- Be cleared of any controversy in relation to biodiversity and pollution

Amundi already considers specific Principle Adverse Impacts within its exclusion policy as part of Amundi's Responsible Investment Policy. These exclusions, which apply on the top of the tests detailed above, cover the following topics: exclusions on controversial weapons, Violations of UN Global Compact principles, coal and tobacco.

– ***Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:***

Yes, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights are integrated into our ESG scoring methodology. Our proprietary ESG rating tool assesses issuers using available data from our data providers. For example the model has a dedicated criteria called "Community Involvement & Human Rights" which is applied to all sectors in addition to other human rights linked criteria including socially responsible supply chains, working conditions, and labour relations. Furthermore, we conduct controversy monitoring on a, at minimum, quarterly basis which includes companies identified for human rights violations. When controversies arise, analysts evaluate the situation and apply a score to the controversy (using our proprietary scoring methodology) and determine the best course of action. Controversy scores are updated quarterly to track the trend and remediation efforts.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific EU criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The product considers all the mandatory Principal Adverse Impacts as per Annex 1, Table 1 of the Delegated Regulation (EU) 2022/1288 applying to the product's strategy and relies on a combination of exclusion policies (normative and sectorial), engagement and voting approaches:

- **Exclusion** : Amundi has defined normative, activity-based and sector-based exclusion rules covering some of the key adverse sustainability indicators listed by the Disclosure Regulation.
- **ESG factors integration** : Amundi has adopted minimum ESG integration standards applied by default to its actively managed open-ended funds (exclusion of G rated issuers and better weighted average ESG score higher than the applicable benchmark). The 38 criteria used in Amundi ESG rating approach were also designed to consider key impacts on sustainability factors, as well as quality of the mitigation undertaken are also considered in that respect.
- **Engagement** : Engagement is a continuous and purpose driven process aimed at influencing the activities or behaviour of investee companies. The aim of engagement activities can fall into two categories: to engage an issuer to improve the way it integrates the environmental and social dimension, to engage an issuer to improve its impact on environmental, social, and human rights-related or other sustainability matters that are material to society and the global economy.
- **Vote** : Amundi's voting policy responds to a holistic analysis of all the long-term issues that may influence value creation, including material ESG issues. For more information, please refer to Amundi's Voting Policy .
- **Controversies monitoring** : Amundi has developed a controversy tracking system that relies on three external data providers to systematically track controversies and their level of severity. This quantitative approach is then enriched with an in-depth assessment of each severe controversy, led by ESG analysts and the periodic review of its evolution. This approach applies to all of Amundi's funds.

For any further detail on how mandatory Principal Adverse Impact indicators are taken into account, please refer to the Amundi Sustainable Finance Disclosure Statement available at www.amundi.com.

What were the top investments of this financial product?

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **From 01/01/2024 to 31/12/2024**

Largest Investments	Sector	Sub-Sector	Country	% Assets
BOSTON SCIENTIFIC CORP	Health Care	Health Care Equipment & Services	United States	9.70%
INTUITIVE SURGICAL INC	Health Care	Health Care Equipment & Services	United States	9.35%
STRYKER CORPORATION	Health Care	Health Care Equipment & Services	United States	8.73%
ABBOTT LABORATORIES	Health Care	Health Care Equipment & Services	United States	7.71%

COLOPLAST-B	Health Care	Health Care Equipment & Services	Denmark	2.35%
HOYA CORP	Health Care	Health Care Equipment & Services	Japan	1.83%

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

#1 Aligned with E/S characteristics includes the investments of the financial product used to attain the environmental or social characteristics promoted by the financial product.

#2 Other includes the remaining investments of the financial product which are neither aligned with the environmental or social characteristics, nor are qualified as sustainable investments.

The category **#1 Aligned with E/S characteristics** covers:

- The sub-category **#1A Sustainable** covers environmentally and socially sustainable investments.
- The sub-category **#1B Other E/S characteristics** covers investments aligned with the environmental or social characteristics that do not qualify as sustainable investments.

● **In which economic sectors were the investments made ?**

Sector	Sub-Sector	% Assets
Health Care	Health Care Equipment & Services	94.85%
Health Care	Pharmaceuticals Biotech & Life Sciences	3.33%
Forex	Forex	0.03%
Cash	Cash	1.78%

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The fund promotes both environmental and social characteristics. While the fund did not commit to making investments aligned with the EU Taxonomy, during the reporting period the fund invested 0.00% in sustainable investments aligned with the EU Taxonomy.

● **Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹ ?**

☐

Yes:

☐

In fossil gas

☐

In nuclear energy

☒

No

Reliable data regarding alignment with the EU Taxonomy fossil gas and nuclear energy was not available during the period.

¹Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do no significant harm to any EU Taxonomy objective. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures

● **What was the share of investments in transitional and enabling activities ?**

As of 31/12/2024, using turnover and/or green bond use-of-proceeds data as an indicator, the fund's share of investment in transitional activities was 0.00% and the share of investment in enabling activities was 0.00%. The reported alignment percentage of the investments of the fund with the EU Taxonomy has not been audited by the fund auditors or by any third party.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods ?**

At the end of the previous period: the percentage of investments with Taxonomy alignment was 0.00%.

 are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

 What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy ?

The share of sustainable investments with environmental objective not aligned to taxonomy was **9.58%** at the end of the period.

This is due to the fact that some issuers are considered sustainable investments under the SFDR Regulation but do have a portion of activities that are not aligned with EU taxonomy standards, or for which data is not yet available to perform an EU taxonomy assessment.

 What was the share of socially sustainable investments ?

The share of socially sustainable investments at the end of the period was **16.94%**.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards ?

“#2 Other” includes cash and other instruments held for the purpose of liquidity and portfolio risk management. For unrated bonds and shares, minimum environmental and social safeguards are in place via controversy screening against the UN Global Compact Principles. It may also include ESG unrated securities for which data needed for the measurement of attainment of environmental or social characteristics is not available.

What actions have been taken to meet the environmental and/or social characteristics during the reference period ?

Sustainability indicators are continuously made available in the portfolio management system allowing the portfolio managers to assess the impact of their investment decisions.

These indicators are embedded within AMUNDI’s control framework, with responsibilities spread between the first level of controls performed by the Investment teams themselves and the second level of controls performed by the Risk teams, who monitor compliance with environmental or social characteristics promoted by the fund on an ongoing basis.

Moreover, AMUNDI’s Responsible Investment Policy sets out an active approach to engagement that promotes dialogue with investee companies including those in the portfolio of this product. Our Annual Engagement Report, available on <https://about.amundi.com/esg-documentation>, provides detailed reporting on this engagement and its results

How did this financial product perform compared to the reference benchmark ?

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

This product does not have an ESG Benchmark.

● *How does the reference benchmark differ from a broad market index ?*

This product does not have an ESG Benchmark

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This product does not have an ESG Benchmark.

● *How did this financial product perform compared with the reference benchmark ?*

This product does not have an ESG Benchmark.

● *How did this financial product perform compared with the broad market index ?*

This product does not have an ESG Benchmark.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Sustainable Future Connectivity FAM Fund **Legal entity identifier:** 254900RHZPU7LT4ZQ41

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ **Yes**

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ ☐ **No**

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion 71.38% of sustainable investments

☒ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The Fund met the environmental and social characteristics it promoted as defined in the SFDR precontractual disclosure for the period under review. The Fund promoted environmental and social characteristics by investing in equity securities of issuers deemed to maintain favorable ESG characteristics. Environmental characteristics included carbon intensity, carbon emissions, energy efficiency, water and waste management and biodiversity, while social characteristics included product safety, supply chain, health and safety and human rights.

The Fund partially made sustainable investments.

No reference benchmark was designated for the purpose of attaining the environmental and social characteristics promoted.

● *How did the sustainability indicators perform?*

The performance of the sustainability indicators the Fund used to measure the attainment of the sustainable environmental or social characteristics that it promoted during the period in review as of 31 of December 2024 was:

1. 92.27% of the Fund was invested in securities of issuers with favorable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 71.38% of the Fund was invested in sustainable investments.
4. 57.21% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
5. 14.1% of the Fund invested in sustainable investments with a social objective.

● *...and compared to previous periods?*

During the prior reference period the Fund was invested

1. 94% of the Fund was invested in securities of issuers with favorable ESG characteristics in accordance with Fidelity's Sustainable Investing Framework.
2. in respect of its direct investments in corporate issuers, 0% of the Fund invested in securities of issuers with exposure to the Exclusions.
3. 55% of the Fund was invested in sustainable investments.
4. 43% of the Fund was invested in sustainable investments with an environmental objective in economic activities (that do not qualify as environmentally sustainable under the EU Taxonomy).
5. 11% of the Fund invested in sustainable investments with a social objective.

● *What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?*

While it did not have as its objective a sustainable investment, it had a proportion of 71.38% of sustainable investments. The sustainable investments had an environmental and social objective. The Fund determined a sustainable investment as follows:

- a) issuers that undertake economic activities that contribute to one or more of the environmental objectives set out in the EU Taxonomy and qualify as environmentally sustainable in accordance with EU Taxonomy. This contributed towards the climate change mitigation environmental EU Taxonomy objective; or
- (b) issuers whereby the majority of their business activities (more than 50% of revenue) contributed to environmental or social objectives aligned with one or more of the United Nations Sustainable Development Goals ("SDGs"); or

- (c) issuers which set a decarbonization target consistent with a 1.5-degree warming scenario or lower (verified by the Science Based Target Initiative or a Fidelity Proprietary Climate Rating) which was considered to contribute to environmental objectives; provided they do no significant harm, meet minimum safeguards and good governance criteria.

The SDGs are a series of goals published by the United Nations which recognize that ending poverty and other deprivations must go hand-in-hand with improvements in health and education, economic growth, and a reduction in inequalities, all while tackling climate change and working to preserve the planet's oceans and forests. For further details see the UN website. Environmental focused SDGs include clean water and sanitation; affordable and clean energy; responsible consumption and production; and climate action. Social focused SDGs include no poverty; zero hunger; economic growth and productive employment; industry, innovation and infrastructure; safe and sustainable cities and communities.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

Sustainable investments were screened for involvement in activities that cause significant harm and controversies, assessed through a check that the issuer met minimum safeguards and standard that relate to principal adverse impacts (PAIs) as well as performance on PAI metrics.

This Included: Norms-based screens - the screening out of securities identified under Fidelity's existing norms-based screens (as set out below); Activity-based screens - the screening out of issuers based on their participation in activities with significant negative impacts on society or the environment, including issuers that were considered to have a 'Very Severe' controversy using controversy screens, covering 1) environmental issues, 2) human rights and communities, 3) labor rights and supply chain, 4) customers, 5) governance; and PAI indicators - quantitative data (where available) on PAI indicators were used to evaluate whether an issuer was involved in activities that cause significant harm to any environmental or social objective.

How were the indicators for adverse impacts on sustainability factors taken into account?

For sustainable investments, as set out above, Fidelity undertook a quantitative evaluation to identify issuers with challenging performance on PAI indicators, all mandatory and any relevant indicators for adverse impacts on sustainability factors as set out in Annex 1 of the EU SFDR Regulatory Technical Standards were taken into account (where data was available). Issuers with a low overall score were ineligible to be 'sustainable investments' unless Fidelity's fundamental research determined that the issuer was not breaching "do no significant harm" requirements or was on the path to mitigate the adverse impacts through effective management or transition.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

Norms-based screens were applied: Issuers identified as failing to behave in a way which meets their fundamental responsibilities in the areas of human rights, labor, environmental and anti-corruption as aligned with international norms including those set out by the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, UN Global Compact (UNGC), ILO Standards International Labor Organization (ILO) Conventions, were not considered sustainable investments.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

The list includes the investments constituting **the greatest proportion of investments** of the financial product during the reference period which is: 01/01/2024 - 31/12/2024

How did this financial product consider principal adverse impacts on sustainability factors?

Principal adverse impacts on sustainability factors were considered through and incorporated into investment decisions through a variety of tools, including:

1. Due Diligence - analysis of whether principle adverse impacts were material and negative.
2. ESG rating - Fidelity references ESG ratings which incorporate material principal adverse impacts such as carbon emissions, employee safety and bribery and corruption, water management. For sovereign issued securities, principal adverse impacts were considered through and incorporated into investment decisions using ratings which incorporate material principal adverse impacts such as carbon emissions, social violations and freedom of expression.
3. Exclusions - Fidelity adopted a principles-based approach to ESG matters and as part of this they place companies which we regard as unsuitable investments on an Exclusion List, including but not limited to the following; a firm-wide exclusions list, that includes biological weapons, chemical weapons, the use of stock piling, production and transfer of anti-personnel mines, the treaty of non-proliferation of nuclear weapons and guidance from the UN, World Bank and other global authorities upholding ESG principles.
4. Engagement - Fidelity used engagement as a tool to better understand principal adverse impacts on sustainability factors and, in some circumstances, advocate for enhancing principal adverse impacts and sustainability metrics. Fidelity participated in relevant individual and collaborative engagements that target a number of principal adverse impacts (i.e. Climate Action 100+, Investors Against Slavery and Trafficking APAC).
5. Voting - Fidelity's voting policy included explicit minimum standards for board gender diversity and engagement with climate change. Fidelity may also vote to enhance issuer performance on other indicators.
6. Quarterly reviews monitoring of principal adverse impacts through the Fund's quarterly review process.

Fidelity takes into account specific indicators for each sustainability factor when considering whether investments have a principal adverse impact. These indicators are subject to data availability and may evolve with improving data quality and availability. The above exclusions and screens (the "Exclusions") may be updated from time to time. Please refer to this website for further information: ["Sustainable investing framework"](#).

The following data has been compiled as of December 31st 2024. Classification of securities including Sector and Country are determined as at the last day of the reference period. (December 31st 2024) This data includes all securities, excluding derivatives.

What was the proportion of sustainability-related investments?

The fund invested 71.38% in sustainable investments for the period in review

What was the asset allocation?

(#1 aligned with E/S characteristics) The Fund invested in:

- 92.27% of its assets in securities of issuers with favorable ESG characteristics.
- 71.38% in sustainable investments (#1A sustainable) of which 0.07% have an environmental objective (which is aligned with the EU Taxonomy), 57.21% have an environmental objective (which is not aligned with the EU Taxonomy), 14.1% have a social objective.

Asset allocation describes the share of investments in specific assets.

(#1B Other E/S characteristics) Includes securities of issuers with favorable ESG characteristics but are not sustainable investments.

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

Enabling activities directly enable other activities to make a substantial contribution to an environmental objective.

Transitional activities are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

● In which economic sectors were the investments made?

Sector	Sub Sector	% of NAV
Consumer Discretionary	Not applicable	17.5%
Information Technology	Not applicable	60.9%
Futures and Options	Not applicable	0.6%
Utilities	Not applicable	0.0%
Financials	Not applicable	1.3%
Real Estate	Not applicable	0.0%
Materials	Not applicable	0.0%
Consumer Staples	Not applicable	0.0%
Industrials	Not applicable	1.0%
Communication Services	Not applicable	15.4%
Health Care	Not applicable	1.7%
Energy	Not applicable	0.0%

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

The Fund invested 0.07% in sustainable investments with an environmental objective aligned with the EU Taxonomy.

The compliance of the investments of the Fund with the EU Taxonomy was not subject to an assurance by auditors or a review by third parties.

The taxonomy alignment of the underlying investments of the Fund is measured by turnover.

Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

☐ Yes:

☐ In fossil gas ☐ In nuclear energy

☒ No

The two graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

The following data has been compiled based on the last day of close of calendar quarterly data and averaged for the reference period. The EU taxonomy figures disclosed may differ due to differences in the calculation methodology applied

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.

- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.

- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments in transitional and enabling activities within the meaning of the EU Taxonomy Regulation is 0.00% for transitional activities and 0.00% for enabling activities, measured by Turnover.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

The quarterly average share of sustainable investments (including sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0.2% based on CapEx and 0.9% based on OpEx.

The quarterly average share of sustainable investments (excluding sovereign bonds) with an environmental objective aligned with the EU Taxonomy was 0.3% based on Turnover, 0.2% based on CapEx and 0.9% based on OpEx.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The Fund invested 57.21% in sustainable investments with an environmental objective that was not aligned with the EU Taxonomy.

What was the share of socially sustainable investments?

The Fund invested 14.1% in sustainable investments with a social objective.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

The remaining investments of the Fund were invested in assets aligned with the financial objective of the Fund, cash and cash equivalents for liquidity purposes and derivatives used for investment and efficient portfolio management. As a minimum environmental and social safeguard, the Fund adhered to the Exclusions.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The Investment managers proprietary ESG ratings framework as well as their access to external ESG data providers and ratings agencies have allowed them to assess the ESG characteristics of fund holdings over the period and maintain a consideration of Principle Adverse Impacts. Included in the assessment is to what extent the issuers of these securities deliver on our expectations for best practices. Additionally, the Investment manager have instated a Quarterly Sustainability Review for their Article 8 funds, which has created a specific forum for discussion of the funds qualitative and quantitative ESG characteristics, and

whether they are consistent with requirements and client expectations. This is an extension of their pre-existing risk and compliance processes. Where appropriate they have utilized their spheres of influence on companies via active engagement and stewardship activities.

How did this financial product perform compared to the reference benchmark?

Not applicable

- *How does the reference benchmark differ from a broad market index?*

Not applicable

- *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

Not applicable

- *How did this financial product perform compared with the reference benchmark?*

Not applicable

- *How did this financial product perform compared with the broad market index?*

Not applicable

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

ANNEX IV

Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852

Product name: Changing Lifestyles FAM Fund

Legal entity identifier: 254900QNFKPR5TD69926

Environmental and/or social characteristics

Did this financial product have a sustainable investment objective?

☒ ☐ ☐ **Yes**

☐ It made **sustainable investments with an environmental objective:** ____%

☐ in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☐ in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☐ It made **sustainable investments with a social objective:** ____%

☒ ☐ ☒ **No**

☒ It **promoted Environmental/Social (E/S) characteristics** and while it did not have as its objective a sustainable investment, it had a proportion of 77% of sustainable investments

☐ with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy

☒ with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy

☒ with a social objective

☐ It promoted E/S characteristics, but **did not make any sustainable investments**

To what extent were the environmental and/or social characteristics promoted by this financial product met?

The environmental and/or social characteristics promoted by the Fund were met.

The Fund maintained a higher overall sustainability score than the MSCI All Country World (Net TR) Index, based on the Investment Manager's rating system. This benchmark (which is a broad market index) is not a reference benchmark for the purposes of the environmental and social characteristics promoted by the Fund.

The sustainability score is measured by the Investment Manager's proprietary tool that provides an aggregate estimate of the social and environmental costs and benefits that an issuer may create. It does this by scoring the issuer against a list of indicators – scores may be positive (for example, when an issuer pays more than average living wages) or negative (for example, when an issuer emits carbon). It does this using third party

data as well as the Investment Manager's own estimates and assumptions and the outcome may differ from other sustainability tools and measures.

The result is expressed as an aggregate score of the sustainability indicators for each issuer, specifically a notional percentage (positive or negative) of sales of the relevant underlying issuer. For example, a score of +2% would mean that for every \$100 of sales the issuer generates, it would provide a net positive contribution to society and/or the environment of \$2. The sustainability score of the Fund is derived from the scores of all eligible issuers in the Fund's portfolio measured by the Investment Manager's proprietary tool. The Fund also invested at least 25% of its assets in sustainable investments during the reference period.

The reference period for this Fund is 1 January 2024 to 31 December 2024.

● ***How did the sustainability indicators perform?***

The Fund's sustainability score for the reference period was 0.8% and the benchmark's sustainability score for the reference period was -2.1%. This means that the Fund's weighted average score over a rolling six month period up to the end of the reference period was higher than the benchmark's weighted average score over the same period, based on month-end data.

In each case the sustainability score is calculated as a notional percentage as described above.

During the reference period, the top 5 indicators in Schroders' proprietary tool that contributed positively to the sustainability score of the Fund were:

- Avoided Emissions
- Contraception
- High Salaries
- Innovation
- Medicine

The Investment Manager invested 77% of the Fund's assets in sustainable investments. This figure represents the average percentage of sustainable investments during the reference period, based on quarter-end data. Sustainable investments are measured by reference to the sustainability score in the Investment Manager's proprietary tool.

The Fund also applied certain exclusions, with which the Investment Manager monitored compliance on an ongoing basis via its portfolio compliance framework.

Sustainability indicators measure how the environmental or social characteristics promoted by the financial product are attained.

...and compared to previous periods?

Sustainable investments

This table details the percentage of assets invested in sustainable investments, year on year

Period	Fund (%)
Jan 2024 - Dec 2024	77
Jan 2023 - Dec 2023	71
Jan 2022 - Dec 2022	67

Sustainability score

This table details the Fund's and benchmark's sustainability score, year on year.

Period	Fund (%)	Benchmark(%)
Jan 2024 - Dec 2024	0.8	-2.1
Jan 2023 - Dec 2023	0.2	-2.9
Jan 2022 - Dec 2022	-0.3	-4.6

For 2022 the percentage of sustainable investments was calculated as an average over the last four months of the reference period. From 2023 the percentage is calculated as an average based on quarter-end data

What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?

In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by Schroders' proprietary tool.

The objectives of the sustainable investments that the Fund made included, but were not limited to:

- Avoided Emissions: the estimated environmental benefits of companies that enable system-or economy-wide reductions in carbon emissions;
- Contraception: the estimated societal benefits attained from the production and supply of contraceptives. Assigned in proportion to company market share of global revenue;
- High Salaries: the estimated societal benefit of paying staff above local living wages (for regions in which they operate). Assigned in proportion to the surplus companies are paying employees compared to the average living wage;
- Innovation: the estimated societal benefits arising from the investment in Research and Development (R&D). Assigned based on the unitary benefit of R&D spend, or estimated based on company patent applications; and
- Medicine: the estimated societal benefits arising from the additional social value the sale of such products and services exhibits of the wider economy. Assigned in proportion to the company's involvement in the healthcare value chain and proportion of company market share to global sub-sector revenue.

The above examples of the objectives of the sustainable investments that the Fund made during the reference period are based on the most significant objectives at each quarter-end. Other objectives may have applied during the reference period.

How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?

The Investment Manager's approach to not causing significant harm to any environmental or social sustainable investment objective included the following:

- The Investment Manager applied firm-wide exclusions of the Fund. These related to international conventions on cluster munitions, anti-personnel mines, and chemical and biological weapons and thermal coal mining. Further information and a list of excluded controversial weapons companies is available at <https://www.schroders.com/en/sustainability/active-ownership/group-exclusions/>.
- The Fund excluded companies that derive revenues above certain thresholds from activities related to tobacco and thermal coal.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

- The Fund excluded companies that are assessed by the Investment Manager's to have breached one or more 'global norms' thereby causing significant environmental or social harm; these companies comprise the Investment Manager's 'global norms' breach list. The Investment Manager's determination of whether a company has been involved in such a breach considers relevant principles such as those contained in the UN Global Compact (UNGC) principles, the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. The 'global norms' breach list may be informed by assessments performed by third party providers and by proprietary research, where relevant to a particular situation. In exceptional circumstances a derogation may have been applied in order to allow the Fund to continue to hold a company on the Investment Manager's 'global norms' breach list, for example where the stated investment strategy of the Fund may otherwise be compromised. Any such company was not categorised as a sustainable investment.

- The Fund may have also applied certain other exclusions in addition to those summarised above.

— — — *How were the indicators for adverse impacts on sustainability factors taken into account?*

When seeking to identify significant harm, the Investment Manager's approach to taking into account the Principal Adverse Impacts (PAI) indicators involved taking both a quantitative and a qualitative approach. Investee companies deemed not to satisfy the quantitative thresholds would generally have been excluded, unless on a case-by-case basis the data was deemed not representative of a company's performance in the relevant area. Where it was not considered appropriate or feasible to set quantitative thresholds, the Investment Manager engaged, where relevant, in accordance with the priorities documented in the Schroders Engagement Blueprint and/or voting policy.

This framework is subject to ongoing review, particularly as the availability and quality of the data evolves.

The Investment Manager's approach included:

1. Quantitative: this included indicators where specific thresholds have been established:

- Via the application of exclusions. This approach is relevant to PAI 4 (Exposure to companies active in the fossil fuel sector), PAI 5 (Share of non-renewable energy consumption and production) and PAI 14 (Exposure to controversial weapons). Further, the following PAIs were assessed as part of Schroders 'global norms' breach list exclusion (which seeks to exclude companies where significant harm is occurring): PAI 7 (Activities negatively affecting biodiversity-sensitive areas), PAI 8 (Emissions to water), PAI 9 (Hazardous waste and radioactive waste ratio), PAI 10 (Violations of UN Global Compact principles and Organisation for Economic Cooperation and Development Guidelines for Multinational Enterprises), PAI 11 (Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises and Voluntary) and PAI 14 in Table 3 (Number of identified cases of severe human rights issues and incidents).

- Via the application of an alert system flag if the relevant indicator(s) exceeded a threshold. These quantitative thresholds to assess significant harm are established centrally by the Investment Manager's Sustainable Investment team and monitored systematically. This approach applies to indicators where they have segmented the population into harm groups to establish a threshold, such as carbon related PAI metrics, PAI 1 (GHG emissions), PAI 2 (Carbon footprint) and Voluntary PAI 4 in Table 2 (Investing in companies without carbon emission reduction initiatives). PAI 3 (GHG intensity of investee companies) operates in a similar way but the threshold is based on a revenue metric. A threshold for PAI 6 (Energy consumption intensity per high impact climate sector) is established based on the above-mentioned carbon measures. A similar approach has been taken for PAI 15 (GHG intensity). PAI 16 (Investee countries subject to social violations) also operates in the same way but based on data availability regarding social violations. Through this process the relevant issuer(s) that were deemed not to satisfy the quantitative thresholds were flagged to the Investment Manager for consideration, whose

response may have involved selling the holdings(s) or maintaining the position if on a case-by-case basis the data was deemed not representative of a company's performance in the relevant area. Investee companies deemed to cause significant harm were excluded from the Fund.

2. Qualitative: This included PAI indicators where the Investment Manager's believed that the data available did not enable them to make a quantitative determination regarding whether significant harm was done so as to warrant excluding an investment. In such cases, the Investment Manager engaged where possible with the company or companies held, in accordance with the priorities documented in the Schroders Engagement Blueprint and/or voting policy. This approach applies to indicators such as PAI 12 (Unadjusted gender pay gap) and PAI 13 (Board gender diversity), where they engaged and used their voting rights where they considered appropriate. Both board gender diversity and disclosure of gender pay gap information are captured in the Schroders Engagement Blueprint.

Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:

The portion of the portfolio in sustainable investments were aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights.

Companies on the Investment Manager's 'global norms' breach list were not categorised as sustainable investments. The Investment Manager's determination of whether a company should be included on such list considered the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, among other relevant principles. The 'global norms' breach list was informed by third party providers and proprietary research, where relevant.

The EU Taxonomy sets out a "do not significant harm" principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.

The "do no significant harm" principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Any other sustainable investments must also not significantly harm any environmental or social objectives.

How did this financial product consider principal adverse impacts on sustainability factors?

The Investment Manager's approach to considering principal adverse impacts on sustainability factors differs depending on the relevant indicator. Some indicators were considered via the application of exclusions, some were considered via the investment process and some via engagement. Further details on how these have been considered during the reference period are detailed below.

PAIs were considered as part of pre-investment through the application of exclusions. These included:

- Controversial weapons: PAI 14 (Exposure to controversial weapons, such as anti-personnel mines, cluster munitions, chemical weapons and biological weapons).

- UNGC violators: PAI 10 (Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises) and Schrodgers' 'global norms' breach list which covers: PAI 7 (Activities negatively affecting biodiversity-sensitive areas), PAI 8 (Emissions to water), PAI 9 (Hazardous waste ratio), PAI 10 (Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises), PAI 11 (Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises) and PAI 14 in Table 3 (Number of identified cases of severe human rights issues and incidents).

- Companies that derived revenues above certain thresholds from activities related to thermal coal, that were deemed by the Investment Manager to contribute significantly to climate change were excluded from the investible universe: PAIs 1, 2, 3, 4 and 5 (Greenhouse gas emissions).

During the reference period, PAIs were also considered through integration in the investment research, stock selection and portfolio construction parts of the investment process. For example, in assessing an issuer's overall environmental score, PAIs 1, 2, 3, 4, 5 and 6 were included. In assessing an issuer's overall social score, PAIs 12 and 13 were included.

PAIs were also considered post-investment through engagement where the Investment Manager engaged in line with the approach and expectations set out in the Schrodgers Engagement Blueprint, which outlines their approach to active ownership. During the reference period, they engaged with an investee company on their plans to achieve net zero by 2050, which relates to PAIs 1, 2 and 3. All PAI indicators were monitored via the Investment Manager's PAI dashboard.

A summary of the Fund's engagement activity during the reference period, including the relevant engagement theme, is shown below:

Engagement Theme	# Issuers
Human Rights	9
Corporate Governance	7
Climate Change	5
Human Capital Management	4
Natural Capital and Biodiversity	3
Diversity and Inclusion	1

The engagements shown relate to engagements with companies and issuers.

The Investment Manager's approach is subject to ongoing review, particularly as the availability, and quality, of PAI data evolves

What were the top investments of this financial product?

During the reference period the top 15 investments were:

The list includes the investments constituting the **greatest proportion of investments** of the financial product during the reference period which is: **1 January 2023 to 31 December 2023**

Largest Investments	Sector	% Assets	Country
TJX COS INCORPORATED COMMON STOCK USD1	Consumer Discretionary	4.95	United States
NETFLIX INCORPORATED COMMON STOCK USD0.001	Consumer Discretionary	4.72	United States
WALMART INCORPORATED COMMON STOCK USD0.10	Consumer Staples	4.27	United States
AMAZON.COM INCORPORATED USD0.01	Consumer Discretionary	4.25	United States
META PLATFORM INCORPORATED COMMON STOCK USD0.000006	Information Technology	4.11	United States
MASTERCARD INCORPORATED CLASS A COMMON STOCK USD0.0001	Information Technology	4.03	United States
INDUSTRIA DE DISEÑO TEXTIL SA EUR0.03	Consumer Discretionary	3.70	Spain
SPOTIFY TECHNOLOGY SA COMMON STOCK EUR0.000625	Information Technology	3.50	United States
COMPAGNIE FINANCIERE RICHEMONT SA CHF1 (REGISTERED)	Consumer Discretionary	3.11	Switzerland
BEIERSDORF AG	Consumer Staples	2.94	Germany
MERCADOLIBRE INCORPORATED COMMON STOCK USD0.001	Information Technology	2.92	Brazil
NOVO NORDISK CLASS B DKK0.1	Health Care	2.90	Denmark
HALEON PLC GBP0.01	Consumer Staples	2.78	United Kingdom
BOOKING HOLDINGS INCORPORATED COMMON STOCK USD0.008	Consumer Discretionary	2.68	United States
WHITBREAD PLC SHRS	Consumer Discretionary	2.33	United Kingdom

The list above represents the average of the Fund's holdings at each quarter-end during the reference period.

The largest investments and % of assets referred to above are derived from the Schroders Investment Book of Record (IBoR) data source.

What was the proportion of sustainability-related investments?

What was the asset allocation?

Asset allocation describes the share of investments in specific assets.

The Fund's investments that were used to meet its environmental or social characteristics are summarised below.

#1 Aligned with E/S characteristics includes the Fund's assets that were used to attain the environmental or social characteristics, which is equal to 98%. The Fund maintained a higher overall sustainability score than the MSCI All Country World (Net TR) Index and so the Fund's investments that were scored by the Investment Manager's proprietary sustainability tool are included within #1 on the basis that they contributed to the Fund's sustainability score (whether such individual investment had a positive or a negative score). The percentage in #1 Aligned E/S characteristics represents the average during the reference period, based on quarter-end data

The Fund invested 77% of its assets in sustainable investments. This percentage represents the average during the reference period, based on quarter-end data. Within this, 50% was invested in sustainable investments with an environmental objective and 27% was invested in sustainable

investments with a social objective. The percentage of sustainable investments with an environmental objective and the percentage of sustainable investments with a social objective may not sum to the percentage of sustainable investments, due to rounding. In respect of the proportion of the Fund's portfolio that was invested in sustainable investments, each sustainable investment demonstrated a net positive effect across a range of environmental or social objectives, as scored by the Investment Manager's proprietary tool. A sustainable investment is classified as having an environmental or social objective depending on whether the relevant issuer has a higher score in the Investment Manager's proprietary tool relative to its applicable peer group for its environmental indicators or its social indicators. In each case, indicators are comprised of both "costs" and "benefits".

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes other investments that were not scored by the Investment Manager's proprietary sustainability tool and so did not contribute towards the Fund's sustainability score.

● ***In which economic sectors were the investments made?***

During the reference period investments were made in the following economic sectors:

Sector	Sub-Sector	% Assets
Consumer Discretionary	Consumer Discretionary Distribution & Retail	18.57
Consumer Discretionary	Consumer Durables & Apparel	11.55
Consumer Discretionary	Consumer Services	8.50
Consumer Discretionary	Automobiles & Components	4.98
Consumer Staples	Consumer Staples Distribution & Retail	9.58
Consumer Staples	Household & Personal Products	9.16
Consumer Staples	Food, Beverage & Tobacco	4.99
Communication Services	Media & Entertainment	17.89
Health Care	Pharmaceuticals, Biotechnology & Life Sciences	4.40
Health Care	Health Care Equipment & Services	1.20
Financial	Financial Services	4.03
Financial	Insurance	0.45
Industrial	Capital Goods	0.97
Industrial	Transportation	0.92
Information Technology	Software & Services	1.77
Cash	Cash	1.02

The list above represents the average of the Fund's holdings at each quarter-end during the reference period.

The % of assets and sector classifications aligned to economic sectors referred to above are derived from the Schroders Investment Book of Record (IBoR) data source.

To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

There was no extent to which the Fund's investments (including transitional and enabling activities) with an environmental objective were aligned with the EU Taxonomy. Taxonomy alignment of this Fund's investments has therefore not been calculated and has as a result been deemed to constitute 0% of the Fund's portfolio.

● Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy¹?

- ☐ Yes:
- ☐ In fossil gas ☐ In nuclear energy
- ☒ No

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure** (CapEx) showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure** (OpEx) reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.*

* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

¹ Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

² As there is no Taxonomy-alignment, there is no impact on the graph if sovereign bonds are excluded (i.e. the percentage of Taxonomy-aligned investments remains 0%) and the Management Company therefore believes that there is no need to mention this information.

Enabling activities

directly enable other activities to make a substantial contribution to an environmental objective

Transitional activities

are economic activities for which low-carbon alternatives are not yet available and that have greenhouse gas emission levels corresponding to the best performance.

are sustainable investments with an environmental objective that **do not take into account the criteria** for environmentally sustainable economic activities under Regulation (EU) 2020/852.

What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?

The share of sustainable investments with an environmental objective that were not aligned with the EU Taxonomy was 50%.

What was the share of socially sustainable investments?

The share of sustainable investments with a social objective was 27%.

What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?

#2 Other includes cash, which was treated as neutral for sustainability purposes. #2 also includes investments that were not scored by Schroders’ proprietary sustainability tool and so did not contribute towards the Fund’s sustainability score.

Minimum safeguards were applied where relevant to investments and derivatives by restricting (as appropriate) investments in counterparties where there were ownership links or exposure to higher risk countries (for the purpose of money laundering, terrorist financing, bribery, corruption, tax evasion and sanctions risks). A firm-wide risk assessment considers the risk rating of each jurisdiction; which includes reference to a number of public statements, indices and world governance indicators issued by the UN, the European Union, the UK Government, the Financial Action Task Force and several Non-Government Organisations (NGOs), such as Transparency International and the Basel Committee.

In addition, new counterparties were reviewed by Schroders’ credit risk team and approval of a new counterparty was based on a holistic review of the various sources of information available, including, but not limited to, quality of management, ownership structure, location, regulatory and social environment to which each counterparty is subject, and the degree of development of the local banking system and its regulatory framework. Ongoing monitoring was performed through Schroders’ proprietary tool, which supports the analysis of a counterparty’s management of environmental, social and governance trends and challenges.

The Investment Manager’s Credit Risk team monitored the counterparties and during the reference period, to the extent counterparties were removed from the approved list for all funds in line with their policy and compliance requirements, such counterparties were ineligible for use by the Fund in respect of any relevant investments from the date they were removed.

What actions have been taken to meet the environmental and/or social characteristics during the reference period?

The actions taken during the reference period to meet the environmental and social characteristics promoted by the Fund were the following:

- The Investment Manager applied sustainability criteria when selecting investments for the Fund;
- The Investment Manager considered the sustainability score of the Fund when selecting the assets held by the Fund;
- The Investment Manager utilised a Schroders' proprietary tool to help assess good governance practices of investee companies; and
- The Investment Manager undertook engagements covering one or more of the six priority themes set out in its Engagement Blueprint (link <https://mybrand.schroders.com/m/3222ea4ed44a1f2c/original/schroders-engagement-blueprint.pdf>). A summary of the Fund's engagement activity, including the number of issuers engaged with and the related theme, is shown above in the question 'How did this financial product consider principal adverse impacts on sustainability factors?'. Through their engagement activities, we build relationships and have a two-way dialogue with our investee companies.

How did this financial product perform compared to the reference benchmark?

No index was designated as a reference benchmark for the purpose of attaining the environmental or social characteristics promoted by the Fund.

Reference benchmarks are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.

● *How does the reference benchmark differ from a broad market index?*

This question is not applicable.

● *How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?*

This question is not applicable.

● *How did this financial product perform compared with the reference benchmark?*

This question is not applicable.

● *How did this financial product perform compared with the broad market index?*

This question is not applicable.
